Florists' Hail Association 604

THE first annual meeting of the American Carnation Society at Buffalo, noted elsewhere in this issue marks an event in the progress of American Floriculture. Pratically an auxiliary organization it has shown an inclination and the ability to go it alone. The time is probably not far distant when similar societies will require like opportunities. The exacting demands made on the time of the members will be too great to permit them to meet with the S. A. F. and do justice to both. We look for separate conventions for the Hail Association, The Protective Association, the Telegraph Delivery and others. Thus it must be with the rapid delelopment of these interests.

SEVERAL valuable carnation papers are unavoidably omitted for want of space. They will appear in our next issue.

First Annual Convention of the American Carnation Society held at Buffalo, February 16, 1892.

The Tiffe House this forenoon was a scene of great activity—a veritable nest of carnation enthusiasts, who were constantly arriving with boxes nearly as long as themselves, and which when opened disclosed marvelous blooms of this divine flower, with stems of unprecedented length. No sooner was the box displayed than scores of heads were closely bunched over it and it was only after Mr. Scott had requested that the room be vacated by all except those with goods to unpack that anything could be done toward arranging the exhibition. There must have been over 3,000 blooms on hand. While being staged the corridors in the neighborhood of the room were taken possession of by enthusiastic members who could talk nothing else except soils, temperatures, burstings, vigor and other matters of vital importance to carnationists.

The regular session of the society was called to order by President Edwin Lonsdale of Philadelphia, about 11:30 a. m., 35 members being present. Mr. Wm. Scott of Buffalo addressed a few words of welcome, extending to the meeting the cordial greeting of the Buffalo Florists' Club. He then thanked the society for having honored Buffalo with their first annual meeting, and expressed the hope that the session would be as profitable as it promised to be enthusiastic. He closed by reiterating the desire of the Buffalo florists to aid the organization as far as lay in their power. Mr. C. W. Ward replied in a few well chosen words of thanks. Mr. Pennock read the minutes of the previous meeting, which were accepted. The address of Pres. Lonsdale then followed.

The question of changing the time of the annual meeting was raised. Mr. R. T. Lombard advocated the month of December. This date was opposed by Messrs. Scott, Fancourt and Dorner. The subject was closed by Mr. Lombard's motion that when the meeting adjourned, that they meet at the annual meeting of the S. A. F. in Washington for consideration. The report of Secretary Pennock showed the membership at the Philadelphia meeting to have been 49, at New York 72 and now 106.

The treasurer's report showed the society to be in a prosperous financial condition with a good balance in the treasury.

A letter from Mr. John Thorpe was read expressing regrets at his inability to be present, but assuring them that he was with them in spirit, and urged liberal encouragement to growers of seedlings, reminding them that we may yet secure a perfectly hardy race of carnations.

W. R. Shelmire's paper, "Do Varieties Run Out," was then read. In a discussion of this, Edward Swayne, who took an opposite view at the last meeting, admitted that he was wrong. Prof. L. H. Bailey believes that simple propagation by cuttings was not a devitalizing process. The fact that certain varieties have run out is true; whether they should not have done so is another question. Some kinds have a weak, unstable character to begin with, and he believes such a tendency to debility is as much a characteristic of a variety as is its color or fragrance. Mr. Lombard differs from Mr. Swayne, and instances varieties that have disappeared; cuttings may not have caused this, but they may have aided it. Mr. Ward and Prof. Bailey discussed evolution, extinction and other points of geological history, but finally decided that the question of whether varieties run out in so many million years was not under consideration. Mr. Scott maintained that cuttings from stubby bottom growth as also those from end shooots are comparatively worthless. Side shoots from flowering stems are his ideal cuttings. Prof. Bailey suggested that much disappointment resulted from cutlings made from the wrong part of the plant. Mr. Lombard was not inclined to believe in theory while he had successful practice to the contrary right before his face every day. Mr. H. Dale, of Brampton, related that Mr. Jennings, of his place, now has De Graw and Edwardsii in the best of health, and says they are the best whites he can find to-day. Mr. Lombard suggested that possibly these varieties had taken out naturalization papers in Canada, and thus started new life. Mr. Ward bought Hinze's White from an eastern firm (Henderson) two years ago, and has no flowers yet. He contemplates introducing it under a new name, "Henderson's Never Blooming White." At 12:30 the meeting adjourned for dinner.

AFTERNOON SESSION.

Some fifty people were present when the meeting was called to order at 2:30.

Mr. Scott's paper was highly enjoyed and received enthusiastic applause.

Prof. Arthur during delivery of his essay passed around drawings showing microscopic views of rust spores in different stages, and supplemented his paper with explanations of his treatment. He advises careful wetting of the soil without wetting the foliage. Spray the plants only once a week to keep down red spider. Be careful to take no cuttings with rust on them, and weed out any which show traces while growing; also, to use soil which has no rust in it. Rust is easily identified, because it will always rub off on the hand when nothing else will. Mr. Ward has been troubled badly with spot diseases, for which he uses a solution composed of six ounces of carbonate of copper to one quart of ammonia, mixed with 25 gallons of water, applied with a syringe. He finds that pipes painted with sulphur will prevent it in a great measure.

Prof. Arthur described another disease. [See essay elsewhere in this issue.]

Mr. Scott thought daily syringing was as necessary to save the plants from the fatal attacks of the red spider as from any other disease. Mr. Palmer states that he does not syringe his plants during the entire winter, which was rather a reflection on Mr. Scott's practice. Mr. Scott replied that Mr. Palmer had just moved into the country and that the red spider had probably not yet arrived. Mr. Swayne reports no red spider. He heats with water. His neighbor, who heats with steam, has plenty. Mr. Gasser states that, although he heats with steam, he does not know what red spider looks like. A volume of conflicting testimony followed from all parts of the house.

Mr. Haettel's paper, "Carnations in Southern California," was read by Secretary Pennock.

A paper promised by Secretary Hill was not received in time, and so was passed on the programme.

Prof. Bailey's paper entitled "Thorpe's Ideal," followed. He called attention to the great variableness of species, and illustrated it with the history of the carnation. For three hundred years improvement has been steady, but in 1613 carnations were in existence 3½ inches in diameter. He believes that a 2-inch calyx is least likely to be attained. He would agree with Mr. Lonsdale that it is desirable to increase the length and breadth of the petals rather than the number of petals. Large flowers mean a less number to the square foot, consequently increased cost, and he doubts whether a dollar flower will be profitable if attained. Replying to Mr. McMillan he said old authorities disagree as to the color of the carnation, but it was probably light blue or pale purple, and it is doubtful if it had any fragrance. In the early part of the seventeenth century a half dozen yellow varieties were in existence. Mr. Scott's greatest desideratum is perfect flowers rather than those of enormous size, three inches in diameter is large enough.

The report of the committee on exhibitions was then read, followed by a recess of thirty minutes for examination of the exhibits.

When the convention was again called to order at 5:30 p. m., a committee of three, consisting of Messrs. Pennock, Shelmire and Swayne, were appointed to draft suitable resolutions on the death of Mr. Chas. T. Starr.

The advisability of arranging for a test of new varieties by the various vice presidents was discussed. Messrs. Schoenfeld and Scott gave some very amusing accounts of their experiences in raising seedlings, and of the worthless and disappointing varieties produced. A decision was finally reached empowering the Executive Committee to act at its discretion in distributing new varieties for testing this spring and to report in full next August. This committee was authorized to publish society transactions in full with papers read.

Election of officers then took place and officers of last year were re-elected for the ensuing year. A vote of thanks was tendered to Professors Bailey and Arthur for their papers.

A vote of thanks was tendered to President Lonsdale for dignity and impartiality in the chair, and to the Buffalo florists for kind courtesies. The remainder of the evening was spent in social intercourse as guests of a few members of the Buffalo Club.

[See notes on exhibition elsewhere.]

Extracts from President Lonsdale's Address.

FELLOW MEMBERS:—It is my pleasant duty to announce to you that we are here assembled for the purpose of holding what will be known as the first *annual* meeting of the American Carnation Society. And although it has not been in existence one year, yet we are gratified to know that it is in a very healthy and thriving condition.

It was in this hospitable city of Buffalo, during the convention of the Society of American Florists held here in 1889, that our good friend John Thorpe predicted that within a very short time organizations devoted to the interests of special classes of plants and flowers would be established. It would do his generous heart good to be with us here to-day.

The time was ripe for the founding of this society, and I trust the good work so well begun will continue to go on and improve with the passing of time.

Much of the success which has attended the efforts of carnation lovers in establishing this society is due to valuable assistance freely given by the horticultural press. Advertising space, as well as that devoted to reading matter, has been generously placed at the service of the society, which is herewith fully appreciated and gratefully acknowledged.

Every member of this organization should be made to feel that he is a part of it. There is much work to be done, and the humblest among us can do something. We must all take it as a privilege, as it is our duty, to aid in every possible way in bringing the flower of our adoption to a higher state—nearer perfection—by improving the kinds we have, the methods of cultivation, and of the placing of them into the hands of those who regard them as a necessity.

The excellent example set by the carnation growers of Chester County, Pennsylvania in establishing a local organization devoted to the advancement of the divine flower, might with profit be followed by those so interested in other sections of the country. A place of meeting could be selected, centrally located, and meetings held at least monthly, and if deemed advisable act as auxiliaries to the American Carnation Society. All papers or essays that have been read before the society should be collected and published in pamphlet form. Those members who are unavoidably absent from the meeting are entitled to this consideration, besides every member would like to have them brought together in this convenient form for future reference and preservation. The time is not far distant, I hope, when the society will be able to engage the services of a competent stenographer who can give a faithful report of the proceedings of the meetings, for very often valuable information is brought out in the discussions that is too good to be lost.

New Varieties.—Our society will have to take a stand sooner or later to aid the members in discriminating between varieties that are no better than the kinds we already have and those that are a step onward. The question arises, how best to do this. It was proposed at the initial meeting in Philadelphia that new varieties be tested by the vice-presidents who represent the various sections of the country. These officers might hesitate to undertake so delicate a duty. But if the plants came to them through the secretary under numbers, there need be no objections raised, and all that would be necessary for each vice president to do would be to report to the secretary upon the behavior of all the varieties under trial. I hope that some such measure will be adopted before it is too late, for I feel sure that seedling carnations will soon be as plentiful as seedling chrysanthemums.

Mr. John Thorpe, chief of the Bureau of Floriculture of the World's Columbian Fair, invites all who may have new varieties of carnations which indicate decided merit to send at least six plants of each kind to be thoroughly tested. This ought to be accepted by all who possess new varieties which are believed to be improvements over existing varieties, and I hope some definite action will be taken at this meeting looking towards carrying out this excellent idea.

Classification.—The time may come when the society will find it necessary to establish classes similar to what is done in Europe with the garden Carnation such as Bizarres, Flakes and Picotees. There is an erroneous impression in some places that the latter, though a Dianthus, originated from a different species than did the carnation. This is not so. A Picotee is a carnation in every particular excepting in the markings of the flowers. The distinction is, the petals of a Picotee have a ground color, which are clearly defined, and are distinctly edged with another color. So far, I have not seen a flower with Picotee markings among the varieties which we cultivate. I would not be at all surprised to hear of one spring up at any time, since there are so many seedlings being raised nowadays.

Nomenclature.—The committee appointed to take charge of this matter is doing good work, and its duties will no doubt increase as time goes by. By the system of registering which has been adopted, the duplication of names ought to be reduced to a minimum. I am under the impression that there are two distinct varieties under the name of Zebra. One has been registered by Mr. C. W. Ward, and the other is offered by Mr. Wm. Maule in this spring's catalogue. The variety of carnation which is being grown for the New York market under the name of Lady Emma is not the same as our late lamented co-worker Chas. T. Starr raised and disseminated many years ago. Mr. Thorwald Jensen, who is growing the variety under consideration says that he obtained the stock from a private gardener some time ago under that name. Mr. Jensen has kindly consented to trace, if possible, where the original stock came from.

I regret to have to state that "May Queen" is still being offered by some florists as "Fred Johnson." The latter variety is, I believe, out of cultivation, while the true "May Queen" is likely to remain with us for a long time on account of its many good qualities.

CARNATIONS AT EXHIBITIONS.

I have been much disappointed with the carnation as an exhibition plant in bloom and as a cut flower. Both at Madison Square Garden, New York, last November, and at the Chrysanthemum show of the Pennsylvania Horticultural Society held in Philadelphia, they were almost entire failures, withering in a few hours after having been placed on the exhibition table. At New York the trouble was said to be the electric light; in Philadelphia the escaped unconsumed gas was to blame.

To have a successful exhibition of carnations, new devices will have to be adopted. My own ideas would be something in the nature of neat booths. This would protect the flowers from the cur-

EDWIN LONSDALE.

PRESIDENT AMERICAN CARNATION SOCIETY.

rents of air which are constantly in circulation in large buildings which, to some extent, I feel sure, is at the root of the trouble. I had fully expected to illustrate the idea at this meeting, but circumstances over which I had no control, have prevented. I trust this hint will be taken up by active minds, and a plan perfected which will be adopted at all flower shows everywhere, and forever put an end to this annoyance.

The improvement of existing varieties in the way of raising seedlings I hope will be treated at length at our next annual meeting, giving a list of those kinds which have proven to be of merit as parents.

Thanking the officers and members for their kindly assistance and advice in the past, and with the hope that the interest and enthusiasm, already manifested so conspicuously will continue for the benefit of all, will continue to make its influence felt, I respectfully submit this address to your kind consideration.

The Carnation in the Retail Trade.

BY WILLIAM SCOTT.

[*Read before the American Carnation Society at Buffalo Feb. 16.*]

I thing we will all agree that such an important place does the carnation occupy in our retail business that it deserves the recognition that this convention has given it in having a paper read before it under the above heading, and I wish the topic had been assigned to some one who was better able to do it justice. But I will do the best I can.

First I will speak about its position among flowers generally used in the retail trade. With the exception of the rose, we can better afford to dispense with any other one flower than the carnation. For my part, if I could not be among flowers, a bunch of mixed carnations would be more pleasing to me than any other, not exceping the rose. It seems to befit every occasion, be it festive or funeral, summer or winter. In my retail store the cry of late years has seemed to be always, "Give us more carnations and we can get through with our orders." I have remarked to my clerks, "Your demand for carnations seems to increase out of proportion to your demand for other flowers; how is it?" The reply is, the sale of carnations is always on the increase, and it is so. The white carnation a few years back was in demand for funeral work only. Now it takes its place as one of the flowers that are worn as corsages, carried as bunches, and used in house decoration. The colored carnation has always been in demand on all occasions, but only to a limited extent compared with their use to-day. Take the boutonniere as an instance of its popularity. What flower have we that fills the bill like the carnation? Any color for any taste, and good summer and winter, and although fashions change and the violet and the lily of the valley and the hyacinth have their day, the carnation still goes on forever. And so it should be, for the carnation has some good qualities that other flowers have not and some good varieties in greater proportion than others.

First, it has what may be called its toughness and lasting qualities. The rose has keeping qualities too, but how the smallest scratch or bruise mars them, and in many how soon the color goes, the fragrance is lost, and the petals drop. This applies to many other flowers more or less; but not so the carnation. The color will last, the fragrance will stay, the bruises and knocks will not show, and to the last the petals will not drop. Not alone that, they will close up with old age and try to assume the bud form again, although the bud is not so pointed, and in this stage the florist skillfully wires two or three of them together and almost persuades himself he has a nice double carnation good enough for funeral work. (I have not done this, but I have heard of it.) Then the fragrance of the carnation must not be overlooked. To me it is one of the most delicious, agreeable and spicy of all flower odors. With the exception of the violet I like it the best. Then again, the variety will always sustain its popularity, and the shades and improved colors that you are continually giving us will always insure its retaining its elevated position.

The carnation also combines with these qualties another (if you will allow me to call it a quality), and that is one that its rival the rose is very apt to lack—a moderate and reasonable price. In my experience behind the counter one of our most frequent demands from customers is a few bright, sweet-smelling flowers for a sick friend. We suggest Roman hyacinths—"Too strong"; violets, valley and roses—"Too expensive." The carnation is just right, combining brightness and fragrance with that of comparative cheapness. And this last is most desirable, as the majority of our patrons are not millionaires, and I may add that you can oftener sell carnations when you have not roses, violets or valley, than you can sell the latter in the absence of carnations.

"Secondly," as the ministers used to say, I will speak of the varieties and colors that I consider most valuable to the retail trade. To begin with white, of the different varieties I have handled lately, the one that pleases me best is Silver Spray. It can really be called a white carnation. We seem to be able to get it in good form at all seasons. The form is good, fine stiff stem and keeping qualities most excellent, and generally meets all demands for a white carnation. Hinze's White with me comes next; although often so richly marked it can be used for color, yet it can generally be sold for white; its odor is delicious and keeping qualities and length of stem good, and for bouquets always a favorite. Lamborn, a grand white flower, is so seldom seen by us in the best of shape that we cannot depend on it.

In pink I think it is generally admitted we have in Grace Wilder the best selling carnation up to the present time. It is at all times the most salable variety. It is so soft and pleasing in color, and in the absence of pink roses a customer can be oftener induced to take Wilders than any other flower. Tidal Wave grows in favor every day, and owing to its fine form and peculiar color is rapidly coming to the front. There are a few other beautiful pink varieties recently disseminated, but I have not handled them yet in my retail trade. J. J. Harrison is a good flower for the trade, and like the white ones can be used short stemmed in many designs. One objection, it bursts its calyx a good deal, and it is hard to teach some buyers that the flowers are fresh when they are bursted.

I now come to the two colors that I hope the carnationists here are going to show us an improvement on. I allude to yellow and scarlet. I have used very few Buttercups of late because they are difficult to procure and good ones are, I believe, very scarce. Any amount of fine yellow carnations could be sold. In scarlet I do not consider we have yet a very grand variety on the market. Garfield is a fine bright flower but lacks substance, and Portia although small is a fine color and has a grand stem. Alegatiere is perhaps the finest long stemmed flower in cultivation, but the color is dull. Red carnations have been in such great demand this past year or two that I hope some one will introduce a better market variety than we have at present.

There are many other varieties, not only new kinds but standard kinds, that are good, and favorites in certain localities, but I have made no attempt to comment on or criticize any varieties that I am not well acquainted with. I am prepared to see here to-day some new kinds that will make the retailers' mouths water.

With regard to the price of carnations, the law of supply and demand must in a great measure make the price; but, as I have before stated, they are always moderately cheap. We get much better prices than we used to do, owing to the larger variety and better quality of the new introductions of recent years, and as the size and substance of the flowers increase the retailer will be able to make yet an average advance in prices. I can say that, in my opinion, good long stemmed carnations should never be sold for less than 50 cents per dozen in winter, nor less than 25 cents per dozen in summer. At many times a good advance on these prices can be obtained readily. I only quote these prices as the lowest notch they should reach, and as a grower and store keeper both, I take this opportunity to offer my protest against that foolish and damaging practice of some men situated as I am, who, when they find themselves with a big crop of carnations, say in November or again in June, retail them over their counter at 10 cents per dozen. You have all heard of such cases—I know I have. Far better to sell half the quantity and send the balance to some charitable institution.

In buying carnations the retailer can do better than with almost any other flower from the fact that he can oftener buy direct from the grower. In and around all towns of any size there are growers of more or less extent who go into carnation growing and who prefer to sell to the retailer straight. I mention this as a prefix to what I am going to say in regard to getting carnations from the brokers in large cities. I have found it one of the most unsatisfactory flowers to order. One shipment may be good and the next one found to be in that stage which I attempted to describe as returning to the bud form. Now, I do not see why this should be, as they are the easiest flowers to ship, and prices from these sources are always well up. Perhaps from the fact that the carnation is such an old friend the shipper feels that he can stretch his conscience a little and depend on the well known toughness of his friend the carnation to carry him through.

Now, gentlemen, a few words as to the future of the carnation, and I am done. I know that the advance of the carnation in the favor of the flower buying public will be equally as rapid as it has been in the past, and more especially as this society has been organized and as a result will take more interest in improving the "Divine Flower," and will give to us a better article to offer our patrons. And as the carnation is a flower never in fashion, yet always in fashion, therefore nothing can dethrone it from its position in the trade, which is that of one of the best two flowers for the retailer to handle.

Do Varieties Run Out?

BY W. R. SHELMIRE.

[*Read before the American Carnation Society at Buffalo, Feb. 16.*]

In the propagation of our greenhouse plants it seems to have become the fashion to refer to the art of increasing them by cuttings as something unnatural and altogether out of the regular run of events. Many florists have an idea that the cutting bench is diametrically opposed to nature's laws, and that our plants increased in this way must become weakened, sickly, and the varieties eventually die out by a continuation of the process. It is asserted that propagation is not reproduction; that it is merely the old plant re-invigorated, and from the necessity of the case the stock must degenerate. If the opinions held are not quite so radical, there is still a general mistrust that rooting cuttings to perpetuate the life of a variety is merely a makeshift and sooner or later resort must be had to the seed—the natural and true plan to perpetuate the species.

The object of this paper is to combat these suppositions, and, while I may not be able to entirely convince, I hope at least to throw out a few crumbs of truth which may give food for thought and further investigation. To my mind there is nothing opposed to nature's laws in the propagation of a plant by layers, cuttings, grafts, and so on. All phanerogamous plants are built on the same general plan. The grasses, trees, herbs and cultivated forms of our houses (the carnation being no exception) can all be reduced to ultimate similar parts. This ultimate part is known in botany as the phyton, and merely consists of the stem from joint to joint, and the leaf or leaves attached thereto at the top. A bud starts from the axis of the leaf and stem, reproducing the same plan, varied only in detail by the species; and from the seed to the death of the plant growth is nothing but a repetition of the same process.

But this phyton, this plant part, is much more than a mere extention of growth. It is to all intents and purposes a new plant. It is not independent, because attached to the parent stem; but it is, nevertheless, a *unit*—so that a plant may be said to be a community of individuals; and is in reality as much so as a branch of living coral. Further, each part, each of these independent factors, is capable, under certain circumstances, of striking root and taking on a separate existence. This production of roots from the stems of plants is a general principle in the vegetable kingdom and the foundation of the art of propagation. In a natural state the process is resorted to far more than a casual observer would suspect, and the plants produced thereby, whether in a state of nature or from our propagating tables, are as much a new existence—they are just as truly independent and resuscitated beings as are plants grown from seed. Mr. Thomas Meehan, the veteran botanist, says: "If we take off a cutting and put it in the ground it becomes as truly a new individual as a chicken raised from an egg."

The sugar cane rarely or never produces seeds, but has been increased by layers and cuttings from time immemorial. The banana is another example of a seedless plant. In neither case does there seem to be any lost vitality, although they have been thus grown for ages. Indeed, in cultivation the tendency is to entirely lose the power of producing seeds. Wild plants are increased by layers and cuttings in a state of nature, and examples might be multiplied without number. Many herbs naturally annual are continued from year to year by means of cuttings as well as seeds, the common cardinal flower of our meadows being a prominent example.

But the author of "Carnation Culture" says: "Nature never propagated a carnation by cutting short an incipient cane from the side of the old plant and bid it take upon itself a separate existence." I would take exception to this statement, and make the assertion that it is not only possible but very probable nature *has* propagated the original native species in that very way. Of course it cannot be supposed that she cut the cane or pips by an invisible hand and inserted them in a bed of fine sand with bottom heat and all the modern accessories. But it is easily conceivable that a plant may become broken by wind or the tread of animals, and the parts thus partially broken or entirely separated take root and become new plants. I have observed in our houses when a stem has by accident become broken the separated ends will callous and eventually emit roots in the air if in a damp and shady place. There is no trouble in saving plants thus rooted. Nature does not revolt at the production of plants by cuttings. The phenomena of the cutting bench are in strict accord with nature's laws. It is the business of the florist to beat the old dame at her own game. She, always prodigal, may be satisfied by rooting one cutting in a hundred or thousand. By strict observance of conditions we can turn out 75, 90 or 100 per cent, and they will be just as good as the parent—every one of them—if our work has been properly done.

I will now try to show there is in reality, as far as can be seen with the eye, no difference between a cutting and a seed. This may seem to be a startling assertion, but there is nothing more true than this fact. All plants grow by a multiplication of plant parts (phytons). The one growing from the apex of the preceding one, until finally the branch flowers, bears fruit and forms seed—always borne on the end of the stem. Our microscopes reveal the fact that the embryo within the seed is merely a small phyton consisting of a stem (the caulicle) capable of taking root, and the minute leaves (cotyledons) which expand and produce a bud, which bud sends forth another stem and leaves—or plant part—and so on indefinitely. Note the fact that the stem of the embryo possesses no roots in the seed. These are developed when the seed is placed in the damp and warm ground, just as the roots of a cutting are produced from the lower end of *its* stem under like conditions. Too high or too low a temperature will make sickly and weak plants in the case of either a seed or cutting. And too much or too little water will totally destroy either the one or the other. The seed is a very wise provision of nature for bridging over uncongenial seasons of the year or transporting the species to a distance. Yet there *is* a difference. It is necessary to the formation of a seed that

sexual union shall take place in the ovary and the product of the parts thus brought together partakes of the characteristics of both parents. Thus variation is produced, and without entering into a prolix explanation it may be said in general that the greater the difference in the parents the greater the variation in the seed. The seed is simply nature's method of producing variety. Again I quote from Thos. Meehan: "Individual good is not subserved by seed-bearing, but the union of two distinct cells in one insures variety, which is ever a leading object in nature." Here, then, is the secret opened up to us whereby improvement may be made. The carnation was found a fixed type of single flower generally reproduced by seed. Man began the cultivation of this plant 3,000 years ago, we are told, but he has not yet succeeded in eliminating the single flower from plants grown from seed. By the crossing of varieties and the selection of the better kinds wonderful improvement has taken place until *Jove's own flower* is the rival of any in the market. The process of crossing varieties is one whereby we must discard the bad and hold on to that which is good, and when we have the better variety we must perpetuate it by *cuttings*. Without the seed we would get variation but slowly; without the cutting the improvement would be lost.

But after all we have said we are still brought face to face with the fact that the varieties of carnations grown to-day are not the same as were grown a generation or decade ago. Old kinds discarded, new ones taking their places. And why, I would ask, should this *not* be the case? Without resorting to any theory of disease we can readily see that better varieties have been produced to take the place of the old. A poor commentary it would be on our numerous hybridizers if this were not so.

Lizzie McGowan, Daybreak, Golden Gate, Aurora, etc., are taking the places of Edwardsii, De Graw, Astoria, La Purite, etc., not because they are any more robust or in any way more capable of resisting disease, but because their flowers are better, larger, more perfect and bring a better price on the market. The old must of necessity drop out of the race and give place to their more perfect prototypes.

That varieties run out in six years I do not believe. It takes that long or longer to get a new kind fully distributed. And I am quite confident that many of the older kinds can be found to-day growing as vigorously as ever. There is nothing inherent in the plant whereby they should not be as healthy after 100 years of propagation by cuttings as when they first saw the light of day. Disease may indeed get in its insidious work, but a seedling is just as liable to be so attacked as a kind that has been cultivated for years. Any one who has raised seedlings must have observed the sickly appearance many of the plants present.

It is a sorry thing to contemplate the fact that hardly one seedling in a hundred is worth saving, and that one may soon show signs of failing health. Many varieties in the very year of their introduction show more signs of disease than do those of long standing; and I would allude to Buttercup, Century, Wm. Swayne, Lamborn, Tidal Wave, and very many others if need be, as examples.

I believe this matter of running out of varieties lies entirely in our own hands. If we propagate carefully and judiciously we can preserve them indefinitely. If we are careless, reckless and unobservant they are lost to us forever. Many of the new introductions are spoiled in the beginning (and our entire stock may be ruined in like manner) by indiscriminate and reckless propagation. A good, healthy, fast-growing carnation plant will give us about as many *good* cuttings as flowers. But I am sorry to say there are too many of us not satisfied with the legitimate, but must resort to the reprehensible practice of cutting up the entire plant, and it is needless to add the plants produced from the flower stems are, in my opinion, utterly worthless—they will either die at once or stretch out a precarious existence.

In conclusion, I would make an earnest appeal to all florists for the better education of ourselves, for those who assist us, and for those who come after us. I mean to say, we should be better educated to our calling; and an important part of that calling is to endeavor to find out the laws that govern our every day operations. Science is not difficult to comprehend, and surely the pleasure to be derived from its pursuit will be alone ample compensation for the time thus spent. Of all the sciences *botany* is of the most importance to us. Not the mere lisping of long latin names, but the study of the hidden mysteries of plant life—growth of the seed, development of the embryo, structure of the stem and leaves, expansion of the flower, that culmination of nature's skill. Such studies will not only afford us pleasure, add unto us length of days and afford needed recreation, but will put into our pockets DOLLARS—the great bauble which we are all after.

Carnation Rust, A New and Destructive Disease.

BY PROFESSOR J. C. ARTHUR, PURDUE UNIVERSITY, LA FAYETTE IND.

[*Read before the American Carnation Society at Buffalo Feb. 16.*]

Fig. 1.

Leaf of Carnation with several rust pustules.

It is now three months since the first notice or intimation of the presence of carnation rust in this country was published, but in that time the subject has received much attention from the growers of carnations on the one hand, and from the students of vegetable pathology on the other hand. All agree that the new pest is to be looked upon with more than usual suspicion, and that it should be met with what skill and knowledge can be commanded to keep it within bounds.

Those familiar with the history of plant diseases will recall the rapid and destructive spread of the hollyhock rust in Europe, a rust closely related to the one which has appeared upon carnations. The hollyhock rust appeared in Spain in 1869, being introduced from South America. In 1873 it had extended throughout France and had reached the borders of England and Germany. In another year it had over-run Italy and Germany, and in 1876, seven years after its appearance, it covered all of Europe except the most eastern part of Russia, and proved so destructive that the culture of hollyhocks was all but abandoned.

Instances of the equally disastrous progress of other newly introduced fungous diseases, not so closely related to the carnation rust, however, could easily be multiplied. It will be seen, therefore, that there are no lack of precedents to serve as warnings in contemplating the possible seriousness of the case in hand.

When I first came upon this rust, I hoped that it had really been brought from Europe in the importations of the last season, and was confined to a few establishments, in which case I thought that vigorous measures might result in soon entirely exterminating it from the country. I have learned, however, that its distribution is already quite widespread. It is now known to occur in Massachusetts, Pennsylvania, New York, Ohio, Michigan and Indiana, and is reported from more than one locality in most of these states. I have no doubt that further inquiry will show that it has invaded other states, as the great interest now taken in the carnation has led to large sales and transportation of rooted

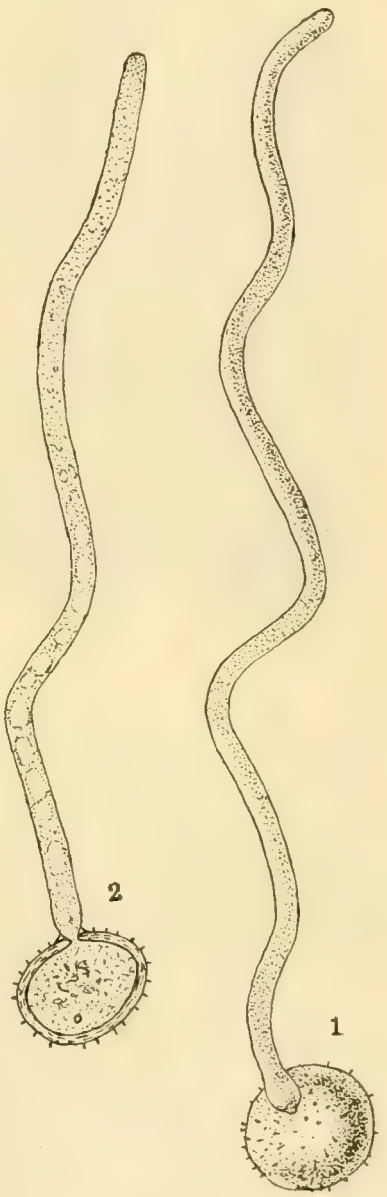

Fig. 2.

Two germinating uredospores. (1) surface view. (2) in optical section.

plants, and a few infected centers might easily distribute the rust as widely as there is a demand for the flower.

There is yet no evidence to show, however, that the fungus has been in this country any considerable length of time. The first impression, that it was brought from Europe with the importations of 1891, is found to be erroneous, as it was collected at Lansing, Mich., by Professor Taft in 1890, and specimens taken at that time are now in my possession. But it was probably established in some places along the Hudson River two or three years earlier yet, as I am informed that

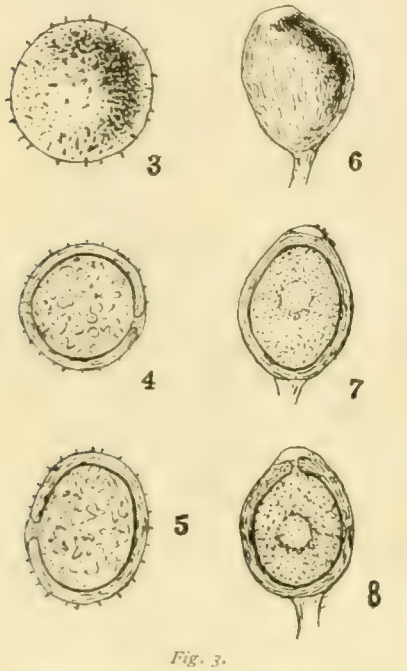

Fig. 3.

Three uredospores (3, 4 and 5), and three teleutospores (6, 7 and 8); numbers 3 and 6 are drawn as seen on the surface, and the others as seen in optical section.

Mr. John Smith, now superintendent of Mr. Robert Craig's place in Philadelphia, claims to have personal knowledge to that effect. As far as present information goes, therefore, the distribution of carnation rust in America has been accomplished within four years.

The rust has long been known in Europe, and is especially common in Italy and Germany. The earliest description of it was given by Professor Schrank in 1789, in a volume on the Bavarian flora. Although so long known, it does not seem to have excited much attention from the economic side, for most works on plant diseases do not refer to it. An Italian treatise by Cavara is the only one so far as I know, that does more than simply mention the name of the fungus.

The cause of the carnation rust is a vegetable parasite, Uromyces Caryophyllinus, that invades the stems and leaves of the plant, and after a time produces a quantity of spores to spread the malady. The first intimation the florist has that his plants are rusting, is the appearance of oblong pustules, a sixteenth to an eighth of an inch long, or even larger, somewhat raised above the surface of the leaf. At first the pustule is covered with the gray outer membrane of the leaf, but this is soon pushed aside, and a brown or blackish mass of spores is exposed. The spores come away easily, and readily adhere to the hands as a brown dust. The pustules are usually scattered, or somewhat clustered, upon both sides of the leaves and on the stem. Plants sometimes become so covered with the rust that they drop the spores as a dust whenever shaken or handled.

The fungus, which does the harm, is inside the leaf or stem of the carnation, and is quite invisible. Even under the microscope it can be brought into view only with much difficulty. After a time spores are produced by this concealed parasite, which forming in masses soon rupture the surface covering of the leaf and are exposed to view.

The spores are for spreading the fungus. There are really two kinds of spores, one for immediate service (uredospores) and and one for use after a considerable period has elapsed (teleutopores). The only difference the naked eye can detect between them is that the latter are slightly darker brown. The two also look somewhat alike under the microscope; but there is a very important physiological distinction that merits your attention. The uredospores will start to grow as soon as ripe, if placed in water, but the teleutospores will only grow after they have passed a certain period of rest. Growth of the uredospores takes place by pushing out a delicate tube from the spore, which reaches its full development in less than twenty-four hours, and dies unless it has in the meantime penetrated a carnation leaf. If this happens, the tube draws nourishment from the juices of the leaf, branches and ramifies through the tissues, and within a month, possibly in a week or two, is ready to bring forth a new crop of spores. In this way the rust is very rapidly propagated from leaf to leaf and from plant to plant, whenever the atmosphere is moist enough to permit a thin film of water to remain on the leaves a few hours, in which the spores may germinate.

The resting spores (teleutospores) do not behave in this way. They germinate (probably after some months) upon the ground, forming still more minute sporules, which are borne to the carnation plant by the wind, and there establish the rust again.

From this knowledge of the habits of the fungus, we may draw some very important suggestions to guide us in fighting it. So far as possible remove the affected leaves, or even whole plants, taking care not to scatter the spores unnecessarily, and burn them, in order especially to destroy the resting spores. Spray the plants with some solution that will check the formation of spores in the old pustules, and at the same time will render the germination of spores falling upon the surface of the plants impossible. When cuttings are removed for the next season's supply of plants, take no diseased branches, and watch the young plants closely to destroy any signs of disease that may develop. Use no soil for pots or beds, and do not plant in the open ground in soil that has become contaminated with spores. At the earliest opportunity remove the soil from benches that have grown diseased plants, depositing it at a safe distance, fumigate the house with burning sulphur to kill any stray spores, and refill the benches with clean soil.

The writer fully believes that careful and persistent attention of this kind will rid an establishment of the pest in one or two seasons. It is, furthermore, evident that by concerted action among carnation growers, it will be quite possible to remove all traces of the disease from this country, and by vigilance on the part of importers to keep it from again gaining a foothold. It is certainly a result much to be desired.

Wherever the rust has obtained much headway, and especially when it appears shortly after the plants have been housed in the fall, the use of some fungicide is almost imperative. Experiments are yet needed to determine what is the best fungicide to use and the best method of applying it, but there are indications that the search will not be a long or difficult one.

Through Mr. E. G. Hill I learn that an old Swiss gardener now at Richmond, Ind., is familiar with the European aspect of the disease, and says it can be controlled by spraying with water in which green vitriol (sulphate of iron) is used at the rate of one-third to one-half a pound in a gallon of water. I am inclined to think that this treatment would be reasonably effective. There are good reasons to suppose, however, that some form of copper solution will be more effective and lead to quicker results. The Bordeaux mixture* is the best known, but is not so easily prepared as the ammoniated copper carbonate.† The latter may be bought ready for use under the name of copperdine. The materials for these remedies

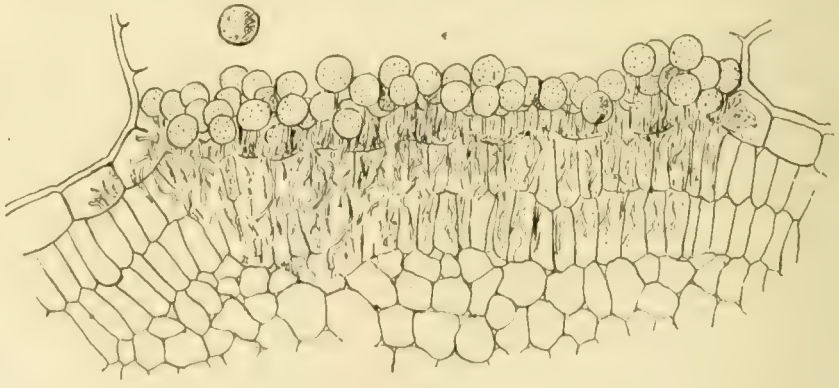

Fig. 4.

Section through a pustule of uredospores. All except Fig. 1 much magnified.

*Made by using 6 pounds of copper sulphate, 4 pounds of quick lime and 22 gallons of water. Make a solution of the copper sulphate in part of the water, make the lime into a thin whitewash, then add both to the remainder of the water mixing well.

†Use 6 ounces of pulverized ammonia carbonate and 1 ounce of copper carbonate to 10 gallons of water. Prepare it as it is needed.

ROSES AT THE LAST NEW YORK EXHIBITION.

are not especially expensive, and if a suitable spraying apparatus is at hand the application will cost but little in either time or money.

A precautionary measure after the rust has appeared in a house is to keep the air as cool and dry as compatible with the health of the plants, thus retarding the growth and distribution of the spores. It is interesting to note that some varieties are more affected than others, the Silver Spray proving itself particularly susceptible.

Carnations in Southern California.

BY C. J. HAETTEL, REDONDO BEACH, CALIFORNIA.

[Read before the American Carnation Society at Buffalo, Feb. 16.]

The following notes are not designed to be a systematic treatise on the cultivation of the Divine flower in this section, but will outline briefly a few points that may be of interest to those not conversant with methods differing materially from those of other localities.

Our soil is almost pure sand, of a dark color, plants grown from cuttings during the season and pinched back once attain a growth of about two feet in diameter and produce hundreds of fine flowers. We never lift them, but keep them always in the ground.

Plants set out in February will bloom until the young plants commence blooming. These will be set out in January direct from the cutting boxes out of the sand to the open ground, and come in bloom in June, when the old plants will be destroyed. Seedlings, I never pinch back, but let them bloom at once. They are set out in rows, 3 feet apart and 6 inches in the row.

We make cuttings from the best in the fall and destroy the remainder.

In planting carnations here, the loss is about one fourth by the borers. They are very troublesome during the months of July and August, but later in the season their ravages cease entirely. We are not troubled with any disease as yet. In making cuttings we use no fire heat, but always choose the coldest season of the year and cuttings will root successfully in 3 or 4 weeks, while in the summer months they damp off in about one week.

January 27th we had our first rain since early in March '91, and during November, December and January our carnations suffered much from the drought, the ground having become so dry that irrigation was of little value. After such a long dry spell the first flowers will split, but in a short time they will be all perfect again, and from now on until May or June we will have an abundance of flowers on our old plants; by that time the young plants will come in bloom, when we will burn the old plants. This season I shall make a planting about the middle of July to 1st of August for a succession of bloom.

Our method of fertilization is probably different from that employed by other growers, and while it is more complicated and expensive than some other modes, I believe it very effective; from 7 to 9 a. m. according to the amount of moisture in the air, the flowers will be ready to pick for the purpose of extracting the pollen, which should then be dry. I use a clean plate to receive it. The easiest way to extract it from the flowers, is to turn the petals back and with a sharp pair of scissors cut the stamens off, after all is gathered, cover the plate with a clean plate of glass, and turn it over occasionally as some moisture will collect on the glass. Under the ordinary circumstances the pollen will be ready to put away early in the afternoon. It is then put through a fine sieve and allowed to fall gently upon a clean sheet of paper, from which it is transferred to a 1 oz. bottle. When we are ready to hybridize we make use of a pair of pincers, such as jewelers use, with this we extract the stamens early in the morning before the flowers have been fertilized by insects or self fertilized; a little later we pass with the pollen bottle and shake a little of it in the calyx covering the pistils when the operation is complete. The same method is employed in fertilization for seedlings of roses, gladioli, amaryllis, cannas, dahlias, etc. We use the best flowers for seedling purposes to retain only the best from which to propagate.

The experience during our past dry winter shows us that we would have better success in growing our seed of carnations the latter part of February, because as we use no fire heat, many of our young seedling plants are lost during the cold dry winter if the seed is sown in the fall.

Twelve Variegated Plants.

It is not always easy to decide just what plants will prove most effective for exhibition purposes in a given class, and it is with this thought in mind that the following list has been made, for these things require attention in the spring if a satisfactory showing is to be made in the fall.

The small number of species here noted may form the nucleus of a much larger collection, there having been no attempt to include crotons, calatheas, caladiums, and many other fine variegated plants that are suited to this purpose, it being an easy matter to increase the number to twenty-five varieties by such additions.

The first to which attention is directed is Phrynium variegatum, one of the most effective plants of recent introduction, when in a good condition, and which may be well grown under similar treatment to the warm house calatheas. This plant may be increased by division of the roots, and requires plenty of water during the season of active growth.

Ficus Parcelli is by no means a new plant, yet comparatively few good specimens are seen, though the plant is easy to grow providing sufficient heat and moisture be given it, and is more easily propagated by means of cuttings than are some of the other members of the same genus. The foliage of this plant is somewhat thin, and consequently will not stand as much sunlight as will the following species, and is also somewhat liable to attacks of red spider unless well syringed.

The next place is admirably filled by Ficus elastica variegata, now so well known as not to need special description. It may be noted, however, that this handsome plant requires plenty of light in order to develop its best coloring, and during the winter it does not need much water overhead, especially during dull weather, as under these circumstances the edges of the leaves will sometimes suffer.

Alocasia macrorhiza variegata is one of the noblest of fine foliage plants for exhibition purposes, its leaves attaining nearly the size of Caladium esculentum under favorable conditions, and being marbled and blotched with large patches of pure white, are remarkably attractive. This alocasia, like most of its congeners, will not grow to any great extent during the winter, but still does not need to be dried off entirely, and can be increased by offsets and small bulbs, which are frequently formed around the parent plant.

Eurya latifolia variegata should by all means be included, for although this plant is not specially quick in forming a large specimen, from its camellia-like habit, yet it is worth waiting for, the foliage being so prettily variegated and the plant usually of symmetrical shape. A temperature of 50° is enough for the well being of this eurya; in fact, one of the finest specimens I have ever seen was grown in a night temperature of 45°, and potted in an open, well-drained compost, composed of about equal portions of coarse loam and peat.

Hibiscus Cooperi is an old-fashioned plant, but one of considerable merit, the leaves of which are of irregular shape and profusely blotched and marbled with white and crimson, the edges of the leaves frequently being of the latter color, as are also the young shoots. This plant can be grown into a shapely specimen by means of a little pruning and pinching, and in order to develop its brightest coloring, should be grown in a warm house. Cuttings root readily, and may be put in at any convenient time of the year.

Heliconia aurea striata has been frequently seen at exhibitions for a few years past, and invariably attracts much attention, its bold canna-like foliage being profusely striped with fine yellow lines, and the leaf stalks usually pinkish in color. Heliconia aurea striata enjoys liberal treatment in heat, moisture and soil, but if grown too soft will frequently suffer from the exposure of a draughty exhibition hall.

Phyllotænium Lindeni is another handsome stove plant of variegated foliage, the leaves of which bear some resemblance to those of an alocasia, and are light green in color, with the midrib and larger veins marked out in white. This plant requires thorough drainage and a rich, open soil, and though it needs an abundance of water when in active growth, yet should never be allowed to become sodden.

Pandanus Veitchii will of course be included in all good collections, and is so popular as not to need description in the present article.

Alpinia vittata is a very pretty representative of the Ginger family with leaves about six to eight inches long, these being handsomely marked with broad stripes of creamy white. This also is an easy plant to grow, and may be increased by division.

The variegated pineapple, Ananas sativa variegata, is one of the finest exhibition plants in cultivation, the coloring of the leaves being so bright and distinct. And to secure the best result in the matter of coloring, the plants should have plenty of light and heat, and in the growing season an occasional watering with liquid manure is beneficial. There is also some difference between crown cuttings and suckers, the first named producing the best plants.

One member from the Dieffenbachias, namely, D. Bausei, will complete our list, and though not one of the latest introductions in this genus, still remains a very good representative of it, the leaves being about one foot long and broad in proportion, the ground color being yellowish green and marked with dark green and white. D. Bausei is comparatively dwarf in habit, and will make a showy plant in about a ten-inch pot; and like all the members of this family, it is best suited in a warm house.

W. H. TAPLIN.

The Violet Disease.

In each number of our good AMERICAN FLORIST I find something relating to the violet disease, but very little is said that I consider valuable. I have raised violets for winter blooming ever since 1863, in cold frames. In the first two years I had this same disease. I changed my treatment, and since then have never seen any of the disease except when I varied from my rule.

I plant my rooted cuttings right in the frames or house. Over the frames I put up a frame work of 2x3 joists, two feet high on lower side and three feet on upper side, on which I lay my sashes, and which I then shade by the use of common laths.

From the time the violets are planted I never give the leaves any water, only water with the hose between plants. When I find red spiders I take boiled water with soap, cooled down to 100° and syringe in the evening. Towards spring, when the sun is hot and the air

THE VIOLET DISEASE.

dry, I syringe with water at 100°, to get the flowers out quicker and kill red spider.

I have noticed that with all violets when planted in the open air under our hot sun, in case of a sudden rain when the ground is hot, the leaves get cooked and in a few days are down on the ground, with scarcely a bit of green to be found. When this happens early in August, they may outgrow it in a measure by November, but they will alway show it.

I often find the spots on the leaves where the wind may happen to drive some of the rain in. On one occassion last winter the rain came from the east very suddenly, and before I had time to get all the ventilators down, it drove in, and just so far as the rain went the plants were spotted and lost their leaves. In the fall I remove the standards and lower the sashes and give all the sun there is, with plenty of air when possible. Take my advice, keep the cold water off your violet foliage and you will have no disease.

VIOLET.

Azaleas.

Will some of your readers through the columns of the FLORIST tell us how to treat old plants in 9 and 10 inch pots, three to four feet high? Is it best to throw them away and buy new young stock?

H. H. H.

When the azaleas have done blooming, it would be well to knock the plants out of the pots and ascertain if they are pot bound—that is, if the pots are full of roots and need shifting. If that is the case, it would be well to take a knife and reduce the ball a little and shift the plant into one size larger pot than what it was growing in, using a good light soil to which has been added some leaf mould. It would be well if the plant was trimmed into proper shape at the same time by cutting in some of the straggling shoots. Place the plant into a temperature of 55° to 60° and if not diseased it will soon break out into a vigorous growth. When making its young growth the plant should be kept well syringed.

JAMES DEAN.

Frozen Callas.

"Subscriber," page 543, has had a not uncommon misfortune in the freezing of callas. If he wishes to have them in salable condition by May, he should put them in a cool, dry place till about March 10, and then he can easily force a fine growth by the early part of May.

H. C. M.

New York.

The discussion on the relations of employers and employes to each other at the last meeting of the Florists' Club, was very interesting. It seemed to be the general opinion that the happy medium between that leniency which personally attaches the employe to his employer, and that severity which regards the employe as but part of a machine, is difficult to attain. Equal parts of "justice, firmness and kindness," was the specific prescribed by Mr. O'Mara.

Theo. Roehrs is receiving some very handsome Magnas, Laings and Luizets now, a large part of them coming from Mr. Julius Roehrs' Carlton Hill establishment.

Wholesale trade at W. F. Sheridan's seems to be booming. Tulips are plenty, and he is receiving quantities of very fine Mermets and Brides.

Trade at the 34th St. market has been rather dull lately, stock not very large and buyers not very eager.

Alex. McConnell made a unique table decoration for a Silver wedding on Feb. 10. It consisted of two hearts with the points joined by a silver ribbon, on the oval table. The hearts were composed of cattleyas, Roman hyacinths and adiantums. The corsages were of orchids and lily of the valley, tied with narrow silver ribbon. For the gentlemen the popular rosettes, consisting of several carnations tightly wired together, were provided. This rosette fashion is the most abominable thing that has been introduced into the business for many a year. The florist is not to blame for it. Customers demand it and he must submit.

Robt. B. Young's first auction sale for the season is booked for March 1. It will consist of Holland stuff, dormant.

Robt. Craig of Philadelphia has so far recovered, that he has been spending a few days with Mr. J. N. May, where he can enjoy the bracing air of Summit.

The orchid show of Siebrecht & Wadley will open on March 2, at the Eden musee, remaining open until March 10.

Mr. A. Ingram, representing Messrs. Hugh Low & Co. of London, England, has arrived in town.

Dailledouze Bros. are cutting some handsome Wabans.

The Madame Cusins, coming in from F. R. Pierson at present, are superb.

Baltimore.

Let not our neighboring villages think we are asleep or gone fishing because we are not heard from every week. There is no sleep for the steam boiler man, and the woods hereabouts are full of them (the man who runs, not the man who sells them), and as for fishing, we are only getting our tackle ready, after that there will be such a going over the waters of these United States for shy and fat biters as has not been seen for a while.

The Florists' Exchange has passed a rather tempestuous week, but is still doing business at the old stand—and big business at that. At the last annual election of directors the stockholders present decided to pool all flowers received each morning in three grades for each variety, and make growers who had flowers in any pool share alike in the sales or waste of that particular lot of flowers. This was to prevent the possibility of any partiality being shown to one grower or another; but it did not meet the approval of some of the stockholders, who mustered their forces, called a special meeting and, after a somewhat acrimonious debate between the pros and the cons, reinstated the former order of things, in which each grower's stuff is kept strictly separate from the time it is received until sold, or wasted.

The Gardeners' Club has determined to admit a class of members to be known as passive members, who, upon payment of $3 annually, will be admitted with their families to the library and all exhibitions, but not to the business meetings of the club.

The club is just now greatly exercised over the present place of meeting. It is a hall in the second story of a large building, well lighted and warmed, commodious and central. But (the printer should print with a capital b) there is another hall above and perhaps on one side, and a dime museum across the street, all of which places seem to be doing their very best, whenever the club meets; so that it is no uncommon thing to have the tap of of the president's gavel lost in the thunder of feet from the hall above; or for some eloquent speaker to pause one, five or ten minutes to let the band of whichever place has the go get through the popular piece of music (?) which they happen to have selected. A committee has accordingly been appointed to get better quarters, and to combine, if possible, the comforts of a reading room and bowling alley with a hall for meeting, a store to rent the exchange, and maybe even a place where lunch and refreshments of various kinds may be secured.

The essay at the last meeting was by Mr. A. Cook on "The Carnation," and though it is to be feared that the editor will chop "Baltimore's" head and tail off or throw it away altogether, if this report doesn't stop soon, yet for the sake of some one who may be helped, here goes for a synopsis of the essay.

Cuttings in January or February, of side shoots after blooming. Rooted in cool house; then set in boxes two inches deep filled with one-third each sand, loam and manure. Set two inches each way. Keep cool, and, as soon as the weather permits, plant out of doors one foot apart each way. A severe frost after planting will not hurt them. Top them during summer to make bushy; but not later than August. In Ocober plant in houses one foot each way, on benches five inches deep, filled with equal parts of sod and rotted manure. Finds them very impatient of wet soil. Thinks the cooler they are kept the better the flowers will be; never above 45° or 50°. Syringes freely every clear day. Has grown Swayne, Lamborn, Grace Wilder and others; but for white prefers Lizzie McGowan; for pink a variety called by him Pride of Boston, which, indeed, he considers the most profitable of all except Buttercups.

Mr. Cook grows really fine carnations, and a good many of them, and so his opinions were listened to with interest; but there was no debate afterwards.

Business generally has been very fair during the week, despite the weather, which is tropical one day and arctic the next, a goodly number of receptions and parties helping things along. Possibly the bad weather really helps the market for white flowers, as it certainly increases the amount of funeral work.

More anon. MACK.

Connecticut.

Mr. J. S. Allen was appointed secretary of the Hartford County Horticultural Society, in place of Mr. C. H. Pember, who has resigned.

Governor Bulkeley of Connecticut has invited all persons interested in the World's Fair to meet at the State Capitol on Feb. 22. It is desired that all florists and nurserymen interested in the Fair will be present.

The Board of Directors of Storrs' Agricultural College were re-elected at their last meeting. This college has done much in the interest of horticulture in the state.

Mr. Wm. H. Rand, representing Wm. Elliott & Sons of New York, was in Hartford the past week. Mr. Rand reports a good trip.

For many years the florists have been talking of forming a Connecticut Florists' Society, but nothing has ever been done. It is desired that any florist, seedsman, nurseryman or florists' supply man of the state, who is interested in the forming of a state society, will forward his name and also his ideas of a state society to the following address: Florist, P. O. box 1,015, Hartford, Conn., before March 1. Let us hear from everyone.

Boston.

At the meeting of the Massachusetts Horticutural Society on Feb. 13 there was a fine display of camillia blooms shown by Mr. F. B. Hayes, and flowers of forced hardy shrubs; also, Christmas roses and native cypripedi by C. J. Dawson.

Mr. C. M. Atkinson showed some fine plants of a grand single violet which came fom St. Augustine, Fla., some years ago, and which he alone has in this vicinity. He also exhibited a plant of Sander's Cattleya labiata, bearing three fine flowers.

The long talked of bowling contest between members of the G. & F. Club to decide who should be the owner of the cup won at Toronto, came off at the Allen gymnasium on Monday, Feb. 8. The cup was won by W. H. Elliott with a score of 486 for three games. W. J. Martin came second with a total of 458 and L. H. Foster third, with 454. There were 14 contestants all together. Nine of them were Dorchester men and with this numerical advantage they feel rather dejected over the fact that the cup went to Brighton.

A meeting for the purpose of organizing a permanent bowling club under the auspices of the G. & F. Club was held at the Tremont House on Feb. 13. There were about twenty gentlemen present, and much enthusiasm was manifested. A membership list was opened and is already half full, the number being limited to twenty-five.

Jackson Dawson has some fine plants of the beautiful Andromeda speciosa in full bloom at the present time. This is one of the loveliest as well as most easily forced hardy shrubs.

There are some fine blooming plants of azalea in most of the florists' windows, among which the peerless Vervæneana stands out pre-eminent.

MEDFIELD, MASS.—J. W. Paige, for the past twenty five years a florist of this town, died on January 23. He was widely known and much esteemed in the community. He had been a member of the Society of American Florists for the past two years.

UTICA, N. Y.—The Florists' Club met on February 3, at Bagg's Hotel. The violet disease was the topic for discussion. Mr. Peter Crowe claimed that the disease is a fungous growth, which is subdued most readily by placing sulphur and limeon the heating pipes.

Notes from the Buffalo Convention.

THE EXHIBITION.

Displays of older sorts were as follows: J. Breitmeyer & Son of Detroit showed Century very fine in their collection; the Essex Heights Floral Co. made a large display; Messrs. Geo. Smith. J. M. Gasser, H. Dale, Chas. T. Starr, Webb Bros., W. Muston, Geo. Hancock, J. H. Rebstock, Edward Swayne, Nathan Smith & Son and others showed good collections; T. B. Lewis shows Nellie Lewis and others, the former was also shown by Messrs. Vick and Hill; J. A. Smith exhibited Garfield in good shape. White seedlings not yet sent out were shown as follows: White Beauty, by L. Fawcett; Florence Van Reyper, by Essex Heights Floral Co.; a fine collection by Fred Dorner, three of them grand; other white seedlings by J. Breitmeyer & Son and Chas. T. Starr. In light pink, seedlings were shown by Fred Dorner, two especially fine, Grace Battles by Edwin Lonsdale, and dark pink seedlings were shown as follows: Princess, by Lothrop Wight; Rosalind, by J. Breitmeyer & Son; Tendress, by Essex Heights Floral Co.; Richmond and Spartan, by Fred Dorner. Crimson seedlings, by Fred Dorner, improvements on Anna Webb. Dorner's number 72, a fine scarlet, also five grand fancies from Dorner, whose number 37 was of especially fine form; Golden Triumph, by R. T. Lombard, and Puritan in good shape by Wood Bros.; White Dove, Sea Gull and Mrs. Hitt in good form by Dorner; good plants of Mrs. Fawcett, by Mr. Fawcett.

Webb Bros., vase of seedlings; Wm. Scott, vase including a fine pink; Fred Dorner's whole collection was a revelation, simply magnificent, and the room was packed with visitors; Snow Crest Daisy, by Wm. F. Dreer.

The badge subject was discussed and postponed indefinitely.

On the president's table stood vases of grand Mermets from Gasser and Webb Bros.

Chief John Thorpe, Sec'y Wm. J. Stewart, Professors J. C. Arthur and L. H. Bailey were unanimously elected honorary members.

Mr. Schoenfeld praised warmly the hardy yellow border pink Germania (referred to in AMERICAN FLORIST, issue of Jan. 28, page 522), but said he was unable to get either seed, cuttings or layers from it.

The Committee on Nomenclature presented their printed report containing names and descriptions of new varieties registered by various growers. It was voted that every seedling registered with this society shall have filed with it parentage and pedigree as far back as possible.

Vice Presidents for 1892 were elected as follows: For New England, Benj. Grey, Malden; for Middle States, William Scott, Buffalo; for Western States, Fred Dorner, Lafayette, Ind.; for Northwestern States, R. J. Mendenhall, Minneapolis; for Pacific States, C. J. Haettel, Redondo Beach, Cal.; for Canada, Walter Muston, Deer Park, Ont.

NEWPORT, R. I.—An extensive petition has been presented to the City Council, signed by prominent residents in the vicinity, representing that Mr. J. M. Hodgson's lily pond is the cause of excessive wetness in the neighboring sub soil, and asking that the pond be filled up. The petition was referred to the committee on streets and highways.

St. Louis.

The meeting of the Florists' Club on Feb. 11th, was well attended. The business transacted was for the most part in connection with the list of premiums for the 2nd annual chrysanthemum show. The expected discussion on growing chrysanthemums for exhibition purposes, which was to have been led by Mr. Koenig, was postponed on account of the lateness of the hour. A committee was appointed to revise the constitution.

Trade has been exceptionally good. Flowers of all kinds are scarce, except violets and colored carnations. This is especially true of roses. Not a few would-be customers were disappointed on Saturday with the words "Not a rose in the house" and it might have been added with truth in many cases, and very few of any other flowers for that matter. Set work keeps up to the average. Prices average about the same.

Probably the most expensive and tasty piece of table decoration of this season was done last week at the Southern Hotel by Mrs. Ellison, who has already established quite a reputation in this line of work.

The center piece contained a large loose bunch of Easter lilies, around which the decoration resolved itself into a piece of scroll work. Immense quantities of Von Sion daffodils, narcissi and freesias, all in small glass vessels, nestled among the wealth of maidenhair fern, each separate piece surmounting a circular mirror forming a simple but very artistic arrangement. Sixteen and a half inches were allowed for service.

A plant of Eupatorium ianthinum is in bloom at the Missouri Botanical Garden. With its large, serrate leaves and terminal corymbs of purple flower heads, it forms an attractive house plant. It does not bloom very freely with us. A remarkable plant of Pittosporum Tobird is also in full bloom and fills the air with its perfume. This plant stands about six feet high and is about four and a half feet in diameter. Manettia bicolor is showing itself to advantage at the garden just now. The profusion of scarlet and yellow flowers make a pleasing sight. It does not prosper in this locality when planted during the summer. The excessive heat and clayey nature of the soil may account for this fact. J. W. D.

Philadelphia.

In a circular letter addressed to the trade, in reference to the proposed flower market, Mr. Grigg says that "owing to the lateness of the season and in view of existing contracts, it is deemed inadvisable to continue further efforts towards starting the wholesale market or exchange as proposed, at the present time. In the meantime plans will be modified to meet the changed conditions, and a centrally located headquarters will be opened under the title of the Philadelphia Flower Co. where cut flowers, plants and other goods will be received and sold upon commission. Growers desiring to do so will be welcome to the free use of this establishment as their city headquarters and facilities will be provided for their accomodation." Mr. Grigg adds, "knowing full well that no good thing was born and carried to completion in a day, we will continue to 'agitate' on this line and will use every endeavor to put into operation plans which shall have for their object the betterment of the florist trade in this city."

Trade has been fair the past week, though there has not been the activity we expect to see at this time of the year. Hybrid roses are now to be had in quantity. Heacock and Anderson are cutting some fine Brunners and Laings, both having houses worth going to see. The plants are very well set with buds and the flowers are cut with good long stems. There will be a continuation of this stock until spring, as other houses are in various stages of growth and look very promising. Mr. Heacock's houses of Brides and Mermets are particularly fine. A large tank with a coil of steam pipes in the center is used to heat all the water required for watering.

One large grower thinks seriously of giving up the forcing of hybrids early, as he says that after overcoming the many difficulties that seem to stand in the way of producing good flowers, they must come to the market when there is a good demand, otherwise the prices realized will not pay for the trouble.

If all the baby rubbers that are to be seen in this neighborhood, manage to live through the various tribulations of childhood there should certainly be enough to supply the demand next fall, they are in the hands of men who will likely make a success of them.

The prices of roses and other flowers remain about the same, with the demand equal to the supply. Tulips and narcissus are now very fine and in good demand.

Robert Craig has returned from Summit, and says he feels much benefited by his trip, he is still weak, but is slowly gaining strength, and with the return of spring will no doubt be himself again.

The interest in the Bowling tournaments at the club is increasing, in the first class. Kennedy is now leading with McLean a good second. Kennedy is now the fourth man who has had the lead and many changes are expected before the prize is won. Campbell and Crawford head the list in the second class, while Knopp and Watson are the first and second in class three. In the practice games many high scores are put up, 200 or better is now seen almost every day, John Westcott having several such scores recently. The pool tournament seems to have been sidetracked, the committee ought to switch it on again.

Edwin Lonsdale has one of the prettiest benches of Cypripedium Lawrencianum in the country. He has been cutting a good many blooms of Dendrobium formossum giganteum, which have brought as good prices as cattleyas. His collection of dendrobiums and cattleyas is quite extensive. Pointing to a cypripedium seed pod he says, "You see Pitcher & Manda and I are both in the same business of hybridizing, only I am a million or two behind them, that's all." A house of carnations of every hue, with tagged seed pods innumerable, gives some idea of the study and labor Mr. Lonsdale is putting into the improvement of the carnation, and as he does it with a method, there is no doubt that within a short time great results will be apparent. He loves the work and goes into it with heart and soul. "There are lots of things we fellows don't know about this business yet, and I'm glad of it", he says.

WARREN, O.—The supply was not nearly equal to the demand at the holidays. Prices about the same as last year. Trade is brisk now.

COLUMBUS, O.—C. A. Roth, florist, reported damaged by fire Feb. 13.

Washington.

Business in cut flowers is very active here at present. Fine roses command exceptionally high prices. The White La France, Pierre Guilliot and Beauty are seemingly the favorites, but the supply is not always equal to the demand. Lilies of the valley, tulips, hyacinths, jonquils and narcissus are plentiful, while good violets seem scarce, and even the standard roses are by no means too plentiful.

At the Washington Assembly ball, which took place this week in the spacious white and gold banquet hall of the Arlington Hotel, the leading feature of the decorations consisted of arches, dados and panels made of South Carolina palmetto and pine boughs with an abundance of canes on the latter. The effect was quite striking and pleasing. The favors for the ladies consisted of tiny prettily made up straw swan-like baskets some eight inches long filled with lilies of the valley, violets, pink carnations and select Perle buds arranged just below the balcony on a bank of green, at the base of which was an immense mirror encased in smilax and ferns, upon the face of which floated a stately white swan daintily decorated with garlands and surrounded by his progeny laden with floral favors.

Montreal.

The last meeting of the club here was a lively one. After routine business a motion to have the nomination of officers take place at the meeting previous to the annual one, was voted down. The main argument against it being that it was unnecessary and that nominations and elections were better on the same night. Next came the "pull de resistance" of the evening, this was a motion to affiliate and assist the Horticultural Society, now that the society was in the hands of practical men with an enthusiastic secretary, to try and work it up again. Some of the club members, however, refused to see any good in the society and after discussing the question pro and con for about an hour and a half, the motion got six months hoist.

The annual social will take place on Thursday evening, the 18th inst, at the Athletic club house, where supper, dancing etc. will be enjoyed by some, others will probably try their speed on the piece of road known as the 100 yard dash. Business generally is fairly good. The weather has been simply wretched for flowers, as it has snowed more or less for about a month nearly ever day.

The directors of the Horticultural Society appointed D. Williamson Sec'y, at the last meeting of the board. Mr. W. has been instructed to communicate with the Worlds Fair Chiefs in respect to space for an exhibit of fruit from this province, which will probably open the eyes of some people, at least so far as apples are concerned. They also intend to have the exhibition in September next a credit to the city and not let people go away disgusted. J. B.

"Chrysms."

How will "Chrysms" do for short? "mums" is slangy, "Chrysanths" is frivolous, but "Chrysms" seem to me to be both dignified and euphonious.

R. FERRIS.

BALTIMORE, MD.—The Franklin Davis Nursery Co. has been incorporated here with a capital stock of $100,000, to carry on the nursery business.

Toronto.

Trade lately has been in about its normal state for this time of year. Bulbous stuff is plentiful, but there does not appear to be a glut. Some very good violets are coming in now too, and they go out as fast as they come in.

Mr. Aylett, gardener for a long time at Goldwin Smith Esq's. place (the Grange) was reported to be dying from the effects of the "grippe." Mr. A. was a good old-fashioned, kind hearted English gardener, and would be very much missed amongst the fraternity.

Most of the florists' windows nowadays besides being gay with hyacinths, tulips etc., have a tone given to them with plants and sprays of orchids. Two years ago it was a very rare thing to see an orchid here except at a few private places. We are progressing. E.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By one who knows nothing; 20 years in the business. Address ALPHA, care American Florist, Chicago.

SITUATION WANTED—As a cut flower worker by a young man 24 years old; 7 years' experience. Address C. DORSEY MISH, Lebanon, Pa.

SITUATION WANTED—By young man in a wholesale establishment, to learn the trade. References. Address Box 312, Waynesboro, Pa.

SITUATION WANTED—By practical florist to take charge of place; thorough commercial experience. Age 29; single. Good references. Address ENERGY, care American Florist, Chicago.

SITUATION WANTED—By young man, single, 5 years' experience in growing and forcing roses; best reference as to being sober and steady Address Box 93 Coatesville, Pa.

SITUATION WANTED—By a first-class florist and rose grower; commercial or private place—private preferred; sober, industrious; best of references; 25 years' experience. Address FLORIST, care Ludwig & Richter, Allegheny City, Pa.

SITUATION WANTED—By competent florist and gardener on private place; age 30, single, German; 7 years charge of a place; 10 years in this country. Best of references. Address CHAS. TAILBE, Penna. Hospital, 8th & Spruce Sts., Phila., Pa.

SITUATION WANTED—By a thoroughly practical gardener—private place. Has had charge of some of the best places around Philadelphia. First-class references. Address G S, care John Burton, Chestnut Hill, Philadelphia.

SITUATION WANTED—By a first class German florist; single, 30 years old, about 10 years in this country; understands well to propagate and raise cut flowers and hothouse plants; private or commercial. OTTO LIEB Box H, Edgely, Bucks, Co., Pa

SITUATION WANTED—By a first class man, as head gardener; have had 20 years' experience in Europe and America; understand all plants, orchids especially; have laid out some of the foremost places in the country. Address S. J. F., care Am. Florist.

SITUATION WANTED—In nursery (western place preferred); practical experience in grafting, pruning and propagation of fruit and ornamental trees and shrubs, general greenhouse work, irrigation; age 25; references. Address Q, care Am. Florist.

SITUATION WANTED—By a first-class gardener having a thorough knowledge of all branches of gardening. Had several years' experience in this country. Can furnish the best of references Address R C. care W. J. Stewart, 67 Bromfield St., Boston, Mass.

SITUATION WANTED—By a thorough, practical florist, fully competent to take charge of a large commercial place. Has had experience in leading places in England and the states. First-class references. Good wages expected. Address COMPETENT, care American Florist.

SITUATION WANTED—As manager or foreman by German of 30 years; married; in private or commercial place. Held such position for the last 6 years. Thoroughly versed in growing roses, carnations, violets and all other florists' stuff. Good references. CHAS. JOHNSON, Jackson Ave. Jersey City, N. J.

SITUATION WANTED—By a thorough practical florist and gardener, 14 years' experience, as manager or foreman in a first class wholesale or retail establishment; well posted on general greenhouse stock, roses, carnations, chrysanthemums and violets a specialty, also good landscape gardener. Adrress, stating salary B S, care Am. Florist.

SITUATION WANTED—By a practical gardener and florist, competent to take charge of a large place where roses, carnations, violets, smilax and bulbous stuff is grown; experience in making up, 22 years in the business, sober and good disposition, aged 42; have a son, a hustler about greenhouse, can steamfit and run steam boiler, aged 19. Address R, care Am Florist.

SITUATION WANTED—By gardener in private place; married, small family; 18 years' experience; have a general knowledge of the business; understand the cultivation of grapes, etc. under glass; is a good plantsman and vegetable grower. Wife can make butter if required. Can be well recommended from last employer. Address W B K, 7 Morgan St., Somerville, Mass.

SITUATION WANTED—By a thorough, practical florist and landscaper; fully competent to take charge of a first-class private or commercial place. Has had experience in leading places in Switzerland and France, and in this country for 5 years. Swiss; married: age 30. First-class references. Good wages expected. Address HENRY RELLSTAB, 215 High St., West Mt. Vernon, N. Y.

WANTED—Good man to work in greenhouse. THOMAS F. DELAHUNT, 13th and Potter Sts., Chester, Pa.

WANTED—Catalogues of florist and nursery stock. FAIRVIEW PARK GREENHOUSES, box 29, Mapleton, Ind.

WANTED—A good, reliable man for growing general class of plants and cut flowers. JNO. D. IMLAY, Zanesville, Ohio.

WANTED TO RENT—Greenhouses, dwelling and some land near market. Address WISE, Mt Prospect Ave., Newark, N. J.

WANTED—Vegetable gardener for public institution. Wages $40 and found. Address with full particulars A S, care Vaughan's Seed Store, Chicago.

WANTED—Competent gardener and florist; sober and industrious; for commercial place. Man familiar with irrigation preferred. Address W. N. TEN EYCK, Boulder, Montana.

WANTED—Cut flower man, first class, for A1 trade in big western city. Address with full particulars W, care Vaughan's Seed Store, Chicago.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

Exhibiting Roses.

In this issue we present an engraving from a photograph of a display of roses at the Madison Square exhibition at New York last November. The loose arrangement of the flowers and the massive, richly decorated ware in which they were placed, made them a much more attractive feature than when displayed in smaller bunches without these accessories. Such displays are to be highly commended, and we trust that exhibition managers generally will profit by a view of the one illustrated.

WE HAVE ADDED two more new features to our forthcoming trade directory and reference book. They are lists of leading Park and Cemetery Superintendents of America. We believe that these lists will be a great convenience to the trade in many ways. We shall also give a list of Botanic Gardens in America.

STARK BROS., the nursery men, Louisiana, Mo., are to be commended for the fruit illustrations they are sending out. The engravings are by the half-tone process, direct from photographs. They are bound to be accurate and carry conviction every time.

YOU WILL certainly want a copy of our new Directory and Reference Book, to be issued this month. The price is $2 and it will be worth many times that to you. Order a copy now.

EXCELLENT photographs of Begonia Baumanni and flower spikes of Gladiolus Nanceianus have been sent us by M. Victor Lemoine, Nancy, France.

CEDAR Pot Labels, makers of such would do well to advertise in the Florist. They are enquired for.

SOW THIS WEEK.

Timely Hints on Seed Sowing; from Gardiner's, Philadelphia.

Remember, you were a little late last year with your sowing. Be in good time this season. NOW is an appropriate time for sowing the undernoted species:—

COBEA.	CARNATION, (Marguerite).
PANSY, (International Prize Strain).	COSMOS.
PETUNIA, (Nana).	LOBELIA.
PETUNIA, (large fl'g).	PHLOX, (Nana).
VERBENA.	PHLOX, (large flow'r'g).
AMPELOPSIS.	THUNBERGIA.
CYCLAMEN, (Giant str'n)	TORENIA.
CHRYSANTHEMUM, (Golden Gate strain).	PYRETHRUM, (Uriginosum).

Full descriptions of all the above species and many others in our new Trade List. Send for a copy. A **trade packet** of any of them supplied **for 50c** each. On orders for $2.50 or over we will supply on application,

"ONE OUNCE SMILAX, FRESH SEED, CROP 1891, FREE!"

as a premium. Remember the Smilax Seed is **ABSOLUTELY FREE,** as we give full value on all the other seeds.

Free Smilax for a Limited Time Only!

Remember us on **Gladioli, Begonias, Tuberoses, Caladiums** and other **Spring Bulbs.**

WE SELL CHEAP,

But don't imagine that quality is absent. Quality first, price second. We are noted for reasonable prices combined with perfection in quality.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

From Omaha.

I have made up my mind to stay with this growing business and make it larger and more of it.—*Frank T. Emerson.*

THE Yoakem Seed and Nursery Company, with a capital stock of $10,000, has been incorporated at Tyler, Tex., by L. W. Wells, John Boughton and J. P. Douglass.

THE STATEMENT of T. W. Emerson & Co., reads: liabilities $75,000, assets $25,000. At a meeting of creditors a committee of the latter recommended acceptance of a cash offer of 25 per cent, to be paid in one month.

SPINGFIELD, MASS.—The B. L. Bragg Co., with a capital stock of $40,000, has been incorporated. They will deal in horticultural and agricultural supplies and implements. The officers are N. C. Newell, Pres., and B. L. Bragg, Treas.

THE RECIPROCITY agreement between the United States and the British West Indies, which went into effect on Feb. 1, admits to this country free of duty, trees, plants, vines and seeds of all kinds, used for propagation or cultivation, also all packages or covering, in which these goods are imported.

KOKOMO, IND.—The thermometer registered 25° below zero here at 6:30 a. m. Jan. 20.

How do we KNOW that BURPEE'S SEEDS GROW?

Because they have all been thoroughly tested by us before they are offered to you. We know their Vitality and Vigor. We also know that their QUALITY IS THE BEST. We raise them from the choicest selected strains, either upon our own farm or subject to our personal supervision, and we are justified in the warrant given in our Catalogue—that there are NO BETTER SEEDS than BURPEE'S. From good seeds only can good crops be grown; nothing should induce you to risk planting any others. You can learn all about THE BEST SEEDS, and what they cost in

1892. GREGORY'S SEED CATALOGUE 1892.

For Over Thirty Years

we have always had very pleasant dealings together, the public and myself, and I again have the pleasure of presenting to them my Annual Vegetable and Flower Seed Catalogue. It contains the usual immense variety of seed, with such new kinds added as have proved to be real acquisitions. Raising many of these varieties myself, on my four seed farms, and testing others, I am able to warrant their freshness and purity, under such reasonable conditions as are contained in my Catalogue. Having been their original introducer, I am headquarters for choice Cory Corn, Miller Melon, Eclipse Beet, Hubbard Squash, Deep Head, All Seasons and Warren Cabbage, Etc., Etc. Catalogue FREE to all.

I make a Specialty of packing stems for flower growers.

Prices and references sent on application.

H. A. STOOTHOFF,
417 E. 76th Street, NEW YORK CITY.

FOR RENT,
ON ACCOUNT OF BAD HEALTH.

Ten greenhouses with stock. This is one of the best places in the United States for shipping purposes. You can ship plants all through the South in Jan and Feb'y in open boxes, and that is a great advantage to a florist. You can establish a very large shipping trade from here south, as it is a great point to ship cut roses, as a man can ship all the roses he raises to Mississippi, Louisiana and Texas, and all other principal cities. There is one drawback to shipping roses from the North here—it is too far. This place has a large local trade and has been established since '88, and is all heated by low pressure steam. We will be ready to rent by the 1st of June—with or without stock—and that is plenty time to plant your roses. Those that are planted in July produce more roses for the holidays than any other time. This is a good chance for a man to get a big start on a little money. For further information, apply to H. MOORE, 54 Beal St., Memphis, Tenn.

Black Aphis on Alyssum.

Replying to "Kœniga" (page 563) he can easily destroy the black Aphis on sweet alyssum by using the following. To two gallons of water add one teaspooful (not heaping) of Paris green. After mixing thoroughly, syringe the affected plants, taking care that the spray reaches the lower as well as the upper surfaces of the foliage. One application will be sufficient.

Though as a usual thing, I do not believe in the use of poisons in the greenhouse, I note no bad effects on the alyssum from the solution mentioned above, and no stain or undesirable odor is left on the flowers or foliage. Until I began to use it the black fly made it impossible for me to profitably grow alyssum. But do not make the solution any stronger than recommended. N. SINGLER,

Washington Heights, Ill.

WHEN sending us small amounts in postage stamps, please select those of the 2-cent denomination.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

G. J. HORLACHER, Dayton, O.

A NEW

GERANIUM,

MRS. OTTO

SCHUCHT

This Geranium is a dwarf, growing but 1 foot high, the entire stem is white with pink tints, the leaves are light green with white variegat on (not yellow), the young foliage is tinted pink but loses this tint when it is fully developed, flowers single, scarlet. It has been propagated and bedded out successfully for two years without sporting, excepting an occasional shoot of a pure white, but never going back.

Orders are solicited now for plants which will be delivered in April. Price 25 cts. each.

ORCHIDS.

The finest stock in the WORLD. Nearly five acres devoted to their culture.

SANDER'S,

ST. ALBANS,

ENGLAND.

Thirty minutes from London.

New Double White Daisy Snow Crest.

—)o(—

A most distinct variety and an improvement on all existing sorts. Its habit of growth and size of flowers, in comparison with older varieties, is gigantic. The flowers, which are borne on stout, stiff stems from 6 to 10 inches long, are of the purest white and full to the center. When fully developed they rise to a conical or sugar-loaf form, and well grown specimens will cover a silver dollar.

It makes an admirable hardy garden plant or may be forced for cut flowers under the same treatment as violets. $2 per doz.; $15 per 100.

Dreer's Quarterly Wholesale List now ready; mailed free to the trade on receipt of business card.

HENRY A. DREER, 714 Chestnut St., Philadelphia.

What to Grow.

All over our land new greenhouses are being erected, many by untrained men and women, and thinking that older heads (in business,) would be willing to give advice to such, I venture to ask (for the first time) for answers, through the FLORIST, to the following:

1ST. Located 200 miles from Kansas City and St. Joseph, about the same distance east of Denver, with abundance of land to grow plants or bulbs or shrubbery, (but no cut flowers trade, unless by shipment above distances)—what would be best to grow?

2ND. How far can cut flowers be shipped, to wholesale men, with good success? O. A. A. G.

Byron, Neb.

Obituary—Robt. J. Burgess.

It grieves me very much to announce the sad death of Robert J. Burgess, who lost his life at the recent Hotel Royal fire, Fortieth street and Sixth avenue, New York, Sunday morning, February 7.

Mr. Burgess was 22 years old, and was in the employ of the Klunder Company. He was the son of William Burgess, formerly of Glen Cove, L. I., the well-known Marechal Neil rose grower.

He was a young man highly esteemed for his many good qualities, and proved himself to be a most efficient florist, and will be missed by his employers and numerous friends. His friends will be gratified to know that his body was thoroughly identified.

He was buried from his father's house, 230 Seventh avenue, Brooklyn, Sunday, Feb. 14, at 2 p. m., in Evergreen Cemetery. A. W. MERRITT.

JOS. E. BONSALL & SON, Salem, O.

"I have no doubt whatever but what you can recommend this seed very highly as likely to produce some choice and distinct varieties." EDWIN LONSDALE.

"Golden Gate" Chrysanthemum Seed.

A remarkable strain saved by an enthusiastic specialist, collected from **choice varieties only**, and matured under the sunny skies of California. The grower of this seed writes (under date of October 28th, 1891):

"In regard to the Chrysanthemums, I have about 2,500 seedlings in bloom and coming into bloom. I will try and send you some of my best varieties. I always grow them in a natural way without disbudding, as that is the best way to test the true value of a variety. I keep the very best for seed and destroy the balance. I have secured some beautiful varieties the past two years."

Mr. Edwin Lonsdale, Secretary of the American Chrysanthemum Society, (through whom we received the seed referred to above) has tested the sample and finds it of very strong vitality, and adds:

"I have no doubt whatever but what you can recommend this seed very highly as likely to produce some choice and distinct varieties."

The seed germinated freely in 8 days. The whole stock of this remarkable strain of seed has been placed in our hands for distribution. Trade pkts. $1.00 each. Apply early. Stock limited. **JOHN GARDINER & CO., No. 21 N. 13th St., Philadelphia.**

Mammoth Verbena Seed.

NEW CROP NOW READY. Choicest mixed varieties in the brightest colors. Per trade packet, 50 cts.; 1-4 ounce, $1.00; per ounce, $4.00.

The strain we offer this year is far ahead of that sold last season with such satisfactory results. Only the richest colors have been retained, and the largest flowers selected for seed. Seedling plants are now preferred by the leading florists for spring sales because of their vigor and freedom from rust. With this strain to depend on there can be no doubt about the success.

DREER'S DOUBLE HYBRIDIZED PETUNIA SEED, so well known to the trade for the past 30 years, constantly improving by judicious hybridizing. Trade pkt. $1.00; small paper 15 cts.

DREER'S SINGLE GRANDIFLORA MOTTLED AND STRIPED PETUNIA. This strain will give splendid results in pot culture, as well as open ground. It is rich in colors and markings, and of largest size. ⅛ ounce, $2.50; trade packet, 75 cts.

Cobea Scandens.....per oz. 75c. Centaurea Candidissima, per oz. $2; per 1000 seeds, 50c.
Smilax Seed, per lb. $8 " 60c. Gymnocarpa, " 50c. " " 35c.

EXTRA CHOICE FLOWER SEEDS.

List free on application.

FRED. ROEMER, SEED GROWER
QUEDLINBURG, GERMANY.

Chrysanthemum Eva Hoyt.

This new Chrysanthemum gives promise of being a very acceptable addition to our list of yellow sorts. It is in the way of H. E. Widener but a brighter color, and it flowers later than that variety, hardly ever being in bloom previous to Nov. 20, and lasting until Christmas. In habit it is dwarf, much resembling Ivory in growth. It is anticipated that this variety will take rank as the best late yellow in commerce. It was raised by W. K. Harris who sold it to T. H. Spaulding.

NORFOLK, VA.—The twenty-fifth annual meeting of the Norfolk Horticultural and Pomological Society was held here last week and the following officers were elected for the ensuing year: G. F. B. Leighton, president; J. L. Babcock, first vice-president; E. V. White, second vice-president; W. I. Dickerman, third vice-president; Walter A. Edwards, secretary; W. G. Tate, treasurer. Col. Leighton has been president of this society for twenty-five years. It was decided to hold a floral exhibition in May and another in November. The society is to meet monthly in future.

SEND IN your order now for a copy of our new Directory, to be issued this month. Price $2.

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following. Speak quick if you want them:

THE JAQUEMINOT CRIMSON CHRYSANTHEMUM

GEO. W. CHILDS.

We desire to impress upon lovers of chrysanthemums, that this variety is without question the most pertectly formed reflexed crimson variety ever offered; and, like the great and good man it is named after, it will be as much admired and talked about. The flowers are of the largest size. The habit and growth is perfect. It has been tested two seasons and is thoroughly established. It was awarded the Pitcher Gold Medal at Orange, 1890, and a Silver Medal at Philadelphia, 1890.

SINGLE PLANT, $1,00; 6 PLANTS, $5.00; 25 PLANTS, $20.00.

What the Florists' Hail Association has done.

Its risks now amount to nearly a quarter of a million of dollars, over 3,300,000 square feet of glass being insured. Every member who has lost a pane of glass during the past four years or since June 1, 1887, has been paid as soon as his loss was proven. Every subscriber to the guarantee fund which was used in the organization, has been allowed to use the amount as membership fee in joining the association. Only three subscribers have not availed themselves of the offer. It has amended its by-laws, so as to allow double insurance, which is virtually plant insurance. It has appointed a committee to make some arrangement for cheaper fire insurance for its members. Its directors have accepted every pratical proposition for the advancement of the interests of the association. And last, but not least, its 350 members are perfectly satisfied with their investment.

JOHN G. ESLER, Sec'y.

Carnation Novelties.

The article in your Jan. 28 number by Mr. A. M. Herr was very good, witty and wise. But it seems to me there may be room for an honest difference of opinion. It is all well enough for a man to spend his time, bench room, brawn and brains on seedling carnations with merely the æsthetic side in view—the production of the ideal, the "Will-o'-the-Wisp;" that incomparable vision of a perfect pink, which, like to-morrow, never comes; that striving after the unattainable; for as the standard is neared it is shifted forward and never reached. Still we must strive, but in doing so we must take that road (consistent with honor) which leads in the most direct way to the pocket. For it is certainly a fact that most men enter the business of raising carnations not for glory alone, but as bread winners,—and most of us like a little butter on it, too.

Far be it from me to advocate the placing on the market of a seedling until we are satisfied it is, in some degree at least, better than any before it, but who shall be the judge? I hold to the opinion, there is no righteous judge but its owner, and the man who originates a flower which he believes to be a step in advance is not doing justice to himself unless he puts it on the market at once. Every man in the carnation trade should know the varieties already in cultivation. He should know whether a seedling produced by him is any improvement; and if he be an honest man he knows this better than any one else can tell him. By his judgment in this respect he must stand or fall. If he be at fault in that judgment, or if he errs more seriously and attempts to foist on the market an inferior article, sooner or later he suffers the consequence of his indiscretion: bad reputation, lost trade. I believe the course pursued by our late friend, Mr. Chas. T. Starr, to be the correct one. His seedlings were distributed at a good price but a year or two from the seed. The price being high, few were purchased by any one party, but it gave all an opportunity to test their merits and the way was opened to sell in larger quantities at a fair price the next year. I would certainly rather give a good round price per dozen for a new carnation for trial than invest a large sum in a variety, however good it is represented to be, only to find I cannot grow it. The trade do not want large quantities of a new thing. Not because it is regarded with suspicion, but they wish to give it a fair trial on their own grounds before investing largely in it. I think no plant is more particular as to its surroundings than the carnation pink, and no one variety can be universally grown. Because I can grow Chester Pride and Lamborn it is no reason I should recommend them to every florist in the land. If my neighbor can grow Lizzie McGowan and Mrs. Fisher, well and good. *I* cannot, therefore, they are not the kinds for me. The matter of new introductions is the same. If I should invest largely simply because I saw a variety doing finely in another place I *might* possibly make a good thing of it, but it is hardly likely that I would. There is one thing certain, I know very well there would be nothing for me in that variety if, after having purchased the rooted cuttings in the spring at—say $10 per 100, I find the same kinds selling in the fall out of the field at $5, $8 and $10 per 100. This is, indeed, a matter sadly in need of correction by the trade and one result of getting up a large stock of a seedling before putting it on the market.

All honor to Mr. Edwin Lonsdale's disinterested efforts in behalf of the carnation! His efforts should be appreciated by all. No doubt the varieties he will shortly introduce will be much finer than any that have gone before; but no matter how good they may prove to be in his soil and situation, I must try them on my own ground before I can determine whether or no they will do for me; and I should prefer to try them in a small way first.

There is one other very important matter to the man who grows seedlings for profit. He must not hold that seedling too long before introduction. For, in this age of progress, that other fellow will in the interval loom up with one far better, and his beloved child will be "Born to blush unseen, and waste its fragrance on the desert air." W. R. SHELMIRE.

Avondale, Pa., Feb. 3, 1892.

The Carnation as It is Grown in Europe.

BY E. G. HILL.

[*Prepared for the Buffalo convention of the American Carnation Society, but received after meeting adjourned.*]

In every country of Europe, and also in the British Isles, the carnation is an eminently popular flower. Go where you will, cloves, pinks, carnations, are seen in fragrant profusion on every hand. Cottagers in England grow them in excellent style both in pots and in the garden plot. The peasants of France and the housewives of Germany show beautiful plants of both the carnation and the hardy pink. All over Europe, as in America, the carnation is dividing honors with the rose, and while the rose still

leads, the carnation is not many paces behind in popular favor.

The immense quantities of carnations grown in the nurseries of Europe attest its commercial value and give a faint idea of the great number of plants annually distributed, to say nothing of the immense quantity of seed harvested yearly. The great seed establishments of Erfurt, Quedlinburg and other points are fairly a-glow with carnations during the month of July; it is no uncommon sight to see from one to three acres comprising a carnation field: of course these are used for seeding purposes. The method of culture is very simple: the seedling plants are germinated in frames under glass, and when about two inches in height they are transplanted to the field in rows that are 24 inches apart, and spaced 12 inches in the row, where they are most carefully tended and where they flower the second year. A sight of such a carnation patch in bloom is something to be remembered. The prevailing colors are scarlet and crimson of varying shades. The finer strains are divided into classes called Bizarres, Flakes, Fancies and Selfs, and are grown on what are termed stages, this being simply a series of steps usually five in number rising like a stair. This staging is protected on the north by shutters or matting, and is invariably roofed over to keep out the rain. The plants on this staging when in bloom are carefully hand fertilized. The multiplication of the plants is universally accomplished by layering the shoots in the pots in which the plants are growing. The German seedsmen grow and flower their stage plants in wonderful manner. At one of the establishments in Erfurt they had thousands of plants in six-inch pots, every plant carefully tied up and carrying a wealth of bloom little dreamed of in this country. To an American their method of reproduction seems antiquated; as these plants only bloom once a year, it would seem that other methods of propagation might be adopted. The prices realized for the layers of the finer named varieties would astonish even our Pennsylvania growers. The variety Germania is justly esteemed at Erfurt, but is not considered a valuable cut flower variety in this country, I believe.

The Malmaison type is largely grown by the florists and gardeners in France and England. These somewhat approach the perpetual in character. I believe that flowers of this type produce the largest blooms to be found in the entire Dianthus family. Messrs. Veitch's foreman told of a grower who produced flowers of the Malmaison that were six inches across. These he has grown for a number of years, and her majesty the queen is annually presented with these regal beauties, which surpass in size even Mr. Thorpe's ideal flower. I believe there are already some six different shades of the Malmaison, and it might be wise to try cross breeding our perpetual varieties with members of the Malmaison family with a view to increasing the size of the perpetuals. I saw very few blooms, however, but what had burst their calyx.

Lyons, France, is the center from which has emanated the pioneer varieties of the class known as Perpetual flowering carnations, and we are all debtors to M. Alegatiere for the origination and introduction of the perpetual or tree carnation. In fact, most of the varieties cultivated in our country owe their origin to the race originating at Lyons. Alegatiere, Mlle. Carle, Miss Joliffe, Vulcan, Andalusia, Jean Sisley, LeFavori, L'Hermine are varieties of Lyons type well known here.

M. Carle is probably the largest commercial dealer in this particular class of any on the continent. His method of culture is identical with ours as to summer treatment. His plants were growing in the field and had been trimmed or cut back to induce a bushy growth. He was the first to lay stress upon the fact that the life of a carnation is limited; that is, that its usefulness is largely over after having been in existence for 8 or 10 years. Of course there are exceptions to the rule. Your essayist predicts that it will not be long until American varieties of the carnation become popular in Europe, for even now the later productions in America equal the finer of the less free flowering European varieties.

Carnations are not grown to any great extent in England for winter bloom; efforts in this direction always result in partial failure owing to the damp, murky weather which prevails the greater part of the season. But if the Englishman does not possess the pink and the clove in the dull winter months, he makes up for the loss by a profusion of bloom during the spring and summer. Border carnations, as they are termed in England, command a great amount of attention, and the demand for them is largely increasing, and no wonder, for they bloom abundantly the summer through. This section of the family has been much improved in size, and many beautiful new colors have been added. A strong spicy fragrance pervades them, and when their free flowering qualities are considered, we cannot wonder at their popularity with the British public. Varieties of this section imported from the best collections in Europe, failed to give any returns either in growth or bloom when treated similarly in this country.

The "Marguerite" section was beginning to create interest at the time of my visit two years ago; and it was even predicted that they would supersede all other types of the carnation. We have heard similar predictions in this country, but the type will have to be greatly improved before it can divide honors with our American varieties.

Would it not be well for us in this country to raise and breed a race of carnations that will be to American amateurs what the border carnations are to the British people—varieties that would bloom and flower the summer through. Of course our present varieties will bloom fairly well during the summer if properly treated; but we need a dwarfer, more robust race, and I predict it will not be long ere such a class will be known and grown in our own country. In fact, have we not thrown away many varieties that flowered too late in the season, which might have proved the nucleus of a summer flowering race? If hardiness could be added, then indeed would such a race prove valuable to our amateur friends.

It is a sight worth a journey across the water to see the carnations at one of the carnation societies' shows. The plants are grown in a certain sized pot, neatly tied to slight sticks with green twine, the flowers are shown on cards and receive no end of dressing and adjusting of the petals to a nicety with the aid of tweezers and gum. Undoubtedly our worthy president can give us the mode of procedure incident to the staging of plants at the English shows.

I append a list of the varieties of Malmaison type for the benefit of any one wishing to experiment in cross breeding them with the perpetuals. They are Malmaison, pink Malmaison, crimson Malmaison, Gloire de Nancy and Comtesse de Chambord. I thank you for your kindly courtesy and attention.

Echoes From Buffalo.

"Far better than I anticipated."—R. T. Lombard.

"A great success."—E. Swayne.

"Never was there such an array of carnations."—Everybody.

Everybody took rubbers, but, Great Scott! they did not need them.

0° Tuesday morning.

The professors did much to make the meeting a success.

The society should adopt as its own the classical ballad "The Duke of York" and all members learn the verses.

Everybody was sorry E. G. Hill came too late for the meeting, but his genial smile did one good when he did arrive.

A number of the members "took in" Niagara Falls on Wednesday.

The "venerable" from Wayland, the "Grand Duke" and "Eastern Manager" formed a trio for Boston.

Wednesday evening the Buffalo Florists' Club did much to make our stay a pleasant one.

For pointers on "steam heat" and "violets by lamp light" apply to the vice-president for the middle states.

Any who failed to see Palmer's greenhouses at Lancaster missed a treat. The Grace Wilders and Silver Sprays are a fine sight.

President Lonsdale's display of Grace Battles attracted much attention, and Dorner's grand display stands unrivalled in the annals of carnation exhibits.

The Philadelphia delegation to the Buffalo meeting consisted of Pres. Lonsdale and Messrs. Herr, E. Swayne, Styer, Shelmire and Pennock. Pres. Ladley, delegate from the Chester County Carnation Society, was obliged to forego the pleasure of the trip on account of sickness in his family. They reached Buffalo early Tuesday morning and stayed over until Wednesday morning.

Sec'y Pennock went with W. J. Palmer for what was left of the night after the "social" and returning early Wednesday a. m. All went over to the falls except Pres. Lonsdale and saw the sights thereabouts. The president returned home via Boston, Herr direct to Philadelphia and the remainder of the party via New York and Orange, N. J., where they visited John McGowan. He is full of business, and no chance to get off to Buffalo.; has bought several acres near Orange and will build extensive greenhouses the coming summer. John has several promising seedlings and not enough room now to spread himself. "New Jersey" as a large bright scarlet is fine and when it is exhibited will speak for itself. A new canna, bright yellow, and two new coleus are being grown for early distribution. A "How Do" to Dreers, Harry Michell, Battles and Baker in Philadelphia ended a memorable and profitable trip to several carnationists.

Another Carnation Pest.

EDWIN LONSDALE BEFORE AMERICAN CARNATION SOCIETY.

A few weeks ago Mr. Isaac Layer, florist, brought a few worms here which he said were eating his carnation buds. They worked at night; and all the buds submitted for examination were operated upon by the worms before the flower had expanded. In some cases the base of the calyx was eaten clear through; in others the aim of attack was where the petals had commenced to unfold. In all cases the objective point seemed to be the

CHRYSANTHEMUM ANNIE MANDA.

nectar, or saccharine matter, which is secreted at the base of the flower. At the same time, the petals seemed to have been devoured also. Not having seen or heard anything of these pests before, they were forwarded to Prof. Riley, Entomologist U. S. Department of Agriculture at Washington, D. C., who replied as follows.

"The worms which you send are Cut Worms of the species known as Agrotis saucia. Its vernacular name is the 'Variegated Cut Worm.' You will find some account of this insect on pp. 297-8 of the Annual Report of Entomologist for 1884. Judging from the time of year, I suppose they are infesting some green house into which they were probably brought with earth from sod land last fall. As a remedy I should advise spraying the plants with paris green and water in the proportion of ¼ pound of the poison to 50 gallons of water. I would further advise the thorough wetting of the soil from which the worms came with a dilute kerosene soap emulsion made according to the formula given upon page 3 of the enclosed circular. I have heard of a number of similar cases recently where this identical species of cut worm was introduced into greenhouses in the above manner."

After communicating the above information to Mr. Layer, he writes under date Feb. 10 as follows: "I have sprayed the plants with the paris green once as recommended, also the kerosene emulsion. Last evening I found only three worms where I had been finding 15 to 20 heretofore. I will continue using both until I am entirely rid of them. From 400 to 500 buds have been eaten in less than a month in one house. Had I not persevered and caught them, they would have eaten every bud in the house. I will advise you later if I get entirely rid of them."

Carnation Crops.

In this number of your valuable journal we wish to make a final report of carnations cut from the two houses we reported up to Jan. 15 in No. 192. From Nov. 1 to Jan. 15, house No. one, from 1,330 plants of Hinze's White, produced 12,430 flowers; to Feb. 1, 3,788, a total for 3 months of 16,218 flowers. The side benches in same house, planted with 1,270 Grace Wilders, produced in the same time 10,548 flowers.

House No. 2 is planted in center with La France roses; the side benches contain 1,120 Grace Wilders, which produced for November 4,763, December 5,007, January 3,135; total for 3 months 12,905.

The above shows we cut from 1,330 Hinze's White 16,218 flowers; from 2,390 Wilders 23,253; from the 3,720 plants in 3 months a total of 39,471 flowers.

The greatest proportion of flowers was cut between Dec. 15 and Feb. 1. The plants are in full vigor to-day and have not lost half a dozen since they were planted. We attribute this and the large cut to the small number of cuttings we take from each plant—from 3 to 5 is the limit and then only from the strong plants. We never take cuttings until after the first of the year. Our experience is that you cannot have both cuttings and flowers in abundance in December and January, when the flowers are most needed. We hope to hear from a few growers who have done better.

Bristol, Pa. DE WITT BROS.

American Carnation Society.

REPORT OF COMMITTEE ON EXHIBITION.

BUFFALO, N. Y., Feb. 16, 1892.

Your committee to whom was referred the cut flower exhibit, having attended to the duty assigned them, respectfully beg leave to submit the following report. We have found the exhibit a remarkably fine one in the old, the new and the novelty classes. A large number of really fine flowers and an immense diversity of color being shown.

Your committee desire to make special mention of the following exhibits: The large and fine display of new seedlings shown by Fred Dorner, La Fayette, Ind. Also, the very complete display of the older sorts shown by the Essex Heights Floral Company, Belleville, N. J. For the well staged specimens of older sorts by J. M. Gasser, Cleveland, O. Also, for the exhibit of plants by Lemuel Fawcett, Salem, O.

STANDARD SORTS.—J. A. Breitmeyer & Son, Detroit, Mich., show a fine collection in this class. The Essex Heights Floral Company, Belleville, N. J., a large display including a number of last season's novelties. J. M. Gasser, Cleveland, O., a tastefully arranged collection among which Buttercup, Tidal Wave and Daybreak were exceptionally good. Geo. Smith, Manchester, Vt., six varieties in good shape. F. B. Lewis, Lockport, N. Y., Nellie Lewis, J. J. Harrison, and Garfield in fine condition. H. Dale, Brampton, Ont., a good display. Chas. T. Starr, Avondale, Pa., a large display, among which were some extra well grown Golden Gate. Webb Bros., Corfu, N. Y., a fine display of four varieties, Grace Wilder being especially fine. Smith & Son, Adrian, Mich., a fine vase of Garfield. Walter Muston, Toronto, Ont., vase of mixed sorts. W. J. Palmer & Son, Buffalo, N. Y., a large and fine display. Vick and Hill, Rochester, N. Y., a good exhibit of Nellie Lewis, a flat bouquet of same on black card, making a very attractive exhibit.

VARIETIES BEING DISSEMINATED THIS SEASON.—Wood Bros., Fishkill, N. Y., a vase of Puritan, a remarkably good white. R. T. Lombard, Wayland, Mass., a fine vase of Golden Triumph. Lemuel Fawcett, Salem, O., vases of Mrs. Lemuel Fawcett in excellent condition; also, two plants of the same. Fred Dorner, Lafay-

ette, Ind., vase each of White Dove, Sea Gull and Mrs. Hitt. E. G. Hill & Co., Richmond, Ind., vase each of Mrs. Hitt, Fred Dorner, Hoosier and Sentinel, all in good shape.

NOVELTIES NOT BEING DISSEMINATED.—J. A. Breitmeyer & Son, Detroit, Mich., an unnamed white seedling and a vase of Rosalind, a dark pink. Lemuel Fawcett, Salem, O., a single flower shown of White Beauty. Essex Heights Floral Company, Belleville, N. J., vase of Florence J. Van Reyper, a new white; also, Tendresse, a dark pink. Chas. T. Starr, Avondale, Pa., vase of white seedling unnamed. E. G. Hill & Co., Richmond, Ind., fine vase of Edna Craig, a beautiful light pink. Lothrop Wight, Framingham, Mass., vase of Princess, a good dark pink. Edwin Lonsdale, Chestnut Hill, Philadelphia, Pa., a fine vase of Grace Battles, a very delicate solid-colored pink. Fred Dorner, Lafayette, Ind., a number of white, in your committee's estimation the following being the best: Nos. 5, 44, and 87, all of '91; in light pinks, Nos. 50 and 112 of '91 are especially fine; Richmond and Spartan are fine specimens in the darker pink; in fancies, Nos. 34, 55, 20 and 37 all of '91, and 122 of '90 are good flowers of this class; No. 72 of '91 is a very good scarlet, Nos. 12 and 66 single specimens of the crimson class. Webb Bros., Corfu, N. Y., a vase of seedlings. Wm. Scott, Buffalo, N. Y., vase of seedlings, among which was an excellent pink one. Henry A. Dreer, Philadelphia, Pa., a vase of the new daisy Snow Crest, in fine condition. J. M. Gasser, Cleveland, O., several fine vases of roses.

Your committee would recommend that a scale of points or printed regulations be gotten up before another show, as we find such a similarity in the carnation family that it is a hard matter to decide their merits.

Committee { JOHN F. COWELL. DAN'L B. LONG. ALBERT M. HERR.

Some Queries.

ED. AM. FLORIST:—Will you please submit the following to the practical men in the business. Latitude Boston.

1. In building greenhouses, ¾ span, for blooming carnations will it pay to put in upright sash on south side—in front of bench—say 16 inches in depth?
2. Are sash bars grooved for drip, to be used?
3. Will eight 2-inch wrought iron pipes (ample boiler capacity) be sufficient to heat new carnation house 18x100; ridge board 12 feet from ground; house double boarded, papered and partly sheltered by buildings on north?
4. Particular information desired as to the value of syringing foliage of carnations. How often and how liberally from December to March? Benches used.
5. Is it good practice to smoke once a week, fly or no fly, as a preventive?
6. Is spreading stems on the walk or small bunches placed between the plants preferable to smoking?
7. What is the most economical method of applying fir tree oil and other insecticides to foliage? BEGINNER.

Lizzie McGowan as a Keeper.

ED. AM. FLORIST:—We send you in this mail a spray of six Lizzie McGowan carnations. The upper three flowers have been fully open for six weeks and the lower three for two to four weeks on the plant. We took out the terminal bud. This carnation is a great keeper with us.

Clyde, O. E. HALL & SON.

[The flowers arrived in fair condition. —ED.]

American Carnation Society.

REGISTRATION.

Mr. George Creighton, New Hamburg, N. Y., registers Crimson Coronet, from Crimson King crossed by a red seedling. Early and continuous bloomer, robust and healthy, flower of good form and substance, of fair size lasting a long time in perfection.

Peachblow Coronet, from Crimson Coronet, and partakes of the qualities of its parent. The name describes the color perfectly.

White Coronet is from Crimson Coronet crossed by a white seedling. Comes into bloom about midwinter, flowers large, not very full, plant bushy and makes a splendid pot plant for sale or exhibition purposes.

Netherwood, from Portia and Crimson Coronet. Flowers are a very bright scarlet on stiff stems and the habit of the plant is the same as Portia, but later in coming into flower.

King Dianthus. Flowers very large white. Plant tall and an early and continuous bloomer.

Rob Roy. Flowers red, of flat shape, full and early bloomer.

Village Maid. Flowers of blush marked carmine. Plant vigorous, early and free. A model flower on stiff stems.

Notes on Flowering Plants.

Aphelandras.—These bright colored species are but seldom seen among the trade, though quite pretty enough to deserve a place, even though their flowers do not last very long. The aphelandras are easy to grow and do not take up very much room, the most essential in their cultivation being moderate heat and plenty of water while in active growth. A light, rich soil completes the requirements, and in order to secure pretty little plants it is best to raise them from seed, though if this is not readily obtainable, cuttings will answer very well, and are not specially difficult to root.

One of the oldest members of the genus is A. aurantiaca, an upright growing plant with dark green leaves of ovate form, and in common with its fellows bears terminal spikes of flowers, which in this instance are bright orange in color. It is quite an attractive plant while in flower, but is perhaps exceeded in beauty by A. Roezlii, this being an improved form of the above.

A. Roezlii is of similar habit to the preceding, but has a shading of silvery gray over the leaves, and the flowers are more inclined to scarlet.

Another remarkably handsome species is A. nitens, this having dark olive-green leaves which are very glossy and smooth and bright red flowers. A. nitens is one of the finest of the genus and enjoys a temperature of 65° with a moist atmosphere.

A. fascinator is also good, and is of more recent introduction than those already noted, and has sharply pointed ovate leaves of dark green color, broadly veined with silvery white. The flowers of this species are dark scarlet or vermilion and consequently very showy.

Several other species have been introduced at various times, but those briefly referred to above are probably the best for general purposes.

Seeds are generally produced quite freely and do not take long to germinate, but if there are any mice about the place the seeds will require close watching for these vermin are very fond of them.

Mussænda frondosa is a somewhat old fashioned stove plant that has become comparatively rare of late years, though when nicely grown it makes a very pretty object, and will flower at almost any season of the year. This plant has dark green leaves of moderate size and slightly pubescent, the flowers being bright yellow and produced in a terminal cluster, the latter being more or less surrounded by pure white bracts, these producing a very odd effect.

As noted before, Mussænda frondosa requires a stove temperature in order to make a rapid growth, though I think it is quite possible that this plant could be grown outdoors during the summer just as poinsettias are treated, and by pinching the growth occasionally it would make nice bushy plants. Cuttings root readily when kept moderately close for a time, and the young plants should not be allowed to become very much pot-bound or they may be stunted thereby.

Scutellaria Mociniana is also a pretty little thing for winter blooming, and would help to brighten a conservatory during the dull days of winter, though the individual flowers are not large and the spikes are of little or no value for cutting from. This is not essentially a stove plant, but can be nicely grown in a temperature of 50° to 55°, young plants being the most satisfactory for all purposes, as old specimens are apt to become scraggy. The flowers of S. Mociniana are produced in racemes and are orange scarlet in color and tubular in shape. Cuttings root almost as readily as those of verbenas, so there is no difficulty in securing a stock. W. H. TAPLIN.

Dipladenias.

As warm greenhouse or stove climbers the dipladenias are among the most beautiful flowers there are. The flowers are mostly pink or rose and purple. D. Boliviensis is white with yellow throat; this is the only white one.

They require a moist warm temperature when in growth and must be very carefully watered, for no plant is more impatient of a sour or waterlogged soil. A rough coarse soil suits them best; peat and sand does very well if the peat is fibrous and in lumps.

They flower towards fall after making a good growth, the flowers coming on the young wood. Some of the varieties have flowers 4 and 5 inches in diameter, are very showy and lasting. The several sorts grown here by Mr. McWilliam flowered finely last season and were much admired by all who saw them, some of the flowers being exhibited in Boston attracted the eye at once on entering the part of Horticultural Hall where the cut flower table was. Very little water is needed when the plants are at rest and then they must be kept in a warm house. In potting keep the plant well elevated above the rim of the pot, which should be half or two thirds filled with potsherds to provide thorough drainage. The young shoots must be carefully watched as they grow and kept to the wires provided for training them up under the glass. If insects appear a soft sponge is as good as anything to wipe them off.

When the plants have done flowering cut back the shoots to several eyes and keep dry till signs of growth appear; water at the root sparingly at first and

MARANTA VIRGINALIS MAJOR.

syringe the top to encourage the young buds and in due time, if all has been attended to rightly, the plants will again repay you for your trouble with a wealth of bloom. W. S.

Whitinsville, Mass., Jan. 14.

Marantas.

There are in this genus of very ornamental leaved stove plants, very many varieties, most if not all of which are extremely beautiful and effective.

The comparative ease with which they may be grown, provided certain essentials are observed, and their usefulness for decorative purposes makes them exceptionally valuable to the florist and indispensable to the collections of amateur growers.

The present may be considered a favorable time for overhauling and dividing marantas. In order to increase the stock shake out whatever old plants may be on hand and divide into as many pieces as there may be separate crowns, potting each piece separately, afterwards plunging them into a little bottom heat to encourage fresh root action.

Marantas delight in a rich open compost; a mixture composed of good fibry loam, peat and leaf soil in equal proportions with a liberal sprinkling of sand and broken charcoal, will be the most suitable; this with clean pots well drained will be a potent factor in obtaining success.

To have the plants in fine healthy condition a temperature of say 65° to 70°, with plenty of atmospheric moisture should be maintained, careful attention being paid to watering; syringing frequently will aid materially in preserving a clean healthy foliage.

Liking a nice shady position, they may be grown under vines or creepers; by so doing much room might be profitably employed that would probably otherwise be practically useless and unprofitable.

Among the many varieties most useful for florists' decorative work might be mentioned:

M. Massangeana, a fine compact grower, the leaves beautifully covered with rich markings.

M. Kerchoviana, a useful little fellow, leaves grayish green, prettily blotched with purple spots.

M. pulchella, leaves bright green with series of deep green markings.

M. micans, leaves dark shining green with white feathery stripe down the center.

M. bicolor, an old but pretty spreading species, ground color of leaves pale glaucous green with irregular shaped blotches of polished dark olive midway between the midrib and margin.

The above will be found especially adapted to the filling of jardinieres, etc., lasting well and massed with other plants produce a pretty effect.

M. virginalis major, one of the most striking of the genus, has large light green leaves, broadly ovate, midrib white, having a white band on each side, and when well grown makes a very showy and effective specimen.

M. Warscewiczii, a grand variety with deep velvety green foliage, pleasantly relieved by a feathery stripe of yellowish green on either side of the midrib.

M. Veitchii, leaves rich glossy green marked along each side the midrib with crescent shaped blotches of yellow, softened by shades of green and white, under surface light purple.

M. rosea-picta, glossy green foliage, prettily striated with delicate rose colored markings.

These with other fine varieties such as Vanden-Heckei, princeps, albo-lineata, Makoyana, Lindeni, fasciata, Leitzei, media-picta, eximia, Porteana, Chimboracensis, zebrina, Legrelliana, etc., when well grown would attract and gladden the heart of the admiring amateur and bring the ducats to the capacious pocket of the florist. JOHN R. JOHNSON.

Begonia Coralina.

The pink form of Begonia coralina (Syn. rubra) referred to in the FLORIST of Feb. 11, was first obtained by Robert Veitch, the well known florist of New Haven, Conn., four or five years ago, which he named B. coralina rosea. Mr. Veitch says that the name rubra is a misnomer. It is also catalogued in some of the European lists as coralina. JOHN DALLAS.

Long Island Notes.

BY WM. FALCONER.

KALANCHOE CARNEA doesn't improve any with longer acquaintance. But as a seedsman's novelty it is a gem, it ripens such a lot of seed.

MARGUERITE FLOWERS are very apt to wilt soon after being cut, but I find by dipping them overhead in water as soon as cut as I do maidenhair ferns and then shaking them and setting them in water as usual they are not as apt to wilt as they would be were they not dipped.

FREESIAS.—Although the white flowered forms are the most in demand the yellow bloomed ones seem to have the stoutest stems.

RUDGEA MACROPHYLLA comes from Brazil and is a large thick leaved evergreen shrub that blooms in our greenhouses in winter. The flowers are creamy white of thick, spongy, rather than leathery consistency, and arranged in large globose bunches set close onto the end of the shoots and between the two terminal big leaves. More odd than beautiful, at the same time quite showy when in bloom. But it is a plant that submits patiently to a good deal of ill treatment, and never fails to bloom when the time comes around.

PRIMULA OBCONICA resents any interference on my part by stinging me, still it is so pretty and full of flowers all winter long that I can not give it up. When in full bloom it is a gem of a pot plant for greenhouse, shop, parlor or window decoration, and its sting although irritating is not at all virulent. For cut flowers its blossoms are exquisite and last well, and I have never had any complaint about the hairs on the flower stems stinging any one. It seeds freely, comes readily from seed, and one year old seedlings make nice blooming plants. It likes a little shade. Although it has lived out of doors with me for two or three winters in a desultory way, it cannot be regarded as a hardy plant. Different plants differ a good deal in the size and fullness of their flowers, so when one saves his own seed he should aim carefully at selection.

SMILAX VS. ASPARAGUS.—Ex-President Norton has one of the most aristocratic trades in Boston, and he assures me that he has given up smilax altogether—his customers won't have it—and have taken to Asparagus plumosus.

ASPARAGUS PLUMOSUS NANUS.—I have had "nanus" from two parties, but in due time away it went into a full-sail plumosus. When at Washington in January I heard the Clark Brothers had got the genuine nanus, so went out to their place to see it. I found it there, both it and plumosus, in quantity and in vigorous form. It is not a bush plant any more than is plain plumosus, except in a young state. When planted out and liberally treated it runs 8 feet long, about half the length of the other; and in all its parts—vines, fronds and leaves, it is smaller than plumosus. Another peculiarity about it is a tendency to run or sucker at the root. The nanus is simply a refined form of the plumosus.

THE VARIEGATED-LEAVED Elæagnus pungens.—A few years ago I saw some pretty bushes of these at Westchester, Pa., and I was informed that they seemed to be hardy enough. A year or so later I saw it again at Washington, and Mr. Smith very kindly sent me a plant which I planted out of doors, left it out, and it is out still, and apparently happy enough. This plant pleased me so much that I sent to Europe and got every variegated elæagnus I found offered in England, France and Berlin. But, oh, for the nomenclature! Eleven names for four varieties! But to my story: When in Washington last month I found Mr. Smith's plants very snugly huddled under sashes in a cold frame, while ours were locked in frost and mulched with snow on Long Island. No, I haven't taken them in; when I got home I laid another pine branch or two over them and will let them stay there. They survived last winter unhurt, then why not this one?

Influence of Plants on the Air of Living Rooms.

ED. AM. FLORIST.—One of our high-school pupils wishes to know whether plants in a bedroom vitiate the atmosphere. I am not able to reply to this question quite so positively as I would like. Will you please give in the FLORIST the conclusions recently arrived at upon this point, with any explanations of the relations of living plants to the air of rooms, both night and day, which may maket he subject more clear to the school. W. F. BASSETT.

Every green plant, whether flowering plant or fern, takes carbonic acid from the air, and water from the soil, and these substances are separated into their chemical elements (carbon, oxygen and hydrogen), and the elements recombine to form starch or some other carbohydrate in the green parts of the plant. This formation of organic matter out of inorganic is sometimes spoken of as the fixation of carbon, since this element, which previously existed in the form of of an invisible gas, is thereby fixed in the solid or liquid structure of the plant; it is also sometimes spoken of as assimilation. Taking starch as representing the first evident product of assimilation, which is generally the case, although it may not be the first product actually formed—it is observed that decomposition of an amount of carbonic acid and water sufficient to furnish carbon and hydrogen for a given amount of starch liberates a certain quantity of oxygen not used in forming the latter, and the oxygen thus set free is equal in quantity to that previously combined with the carbon in the carbonic acid removed from the air. It may be said, then, that green plants remove from the air carbonic acid,—which, beyond a certain percentage, renders air unfit for the respiration of animals,—fixes its carbon in their own substance, and returns the entire amount of oxygen contained in this carbonic acid to the air as free oxygen, thus increasing its value for respiration. But this fixation of carbon and the consequent liberation of oxygen occur only in the green parts of plants, and under the effect of strong light like daylight or the electric light; so that the plants of a living room exercise this purifying influence on the air only during the daytime, and so far as this is concerned, are inert at night.

On the other hand, the organic matter which results from this process undergoes within the plant many changes, some of which fit it for transportation from one part of the plant to another. While others attend its conversion from mere food material into the substance of the plant itself. Some few of these changes result in the liberation of a further amount of free oxygen, and to this extent may be said to purify the air. But the greater number of them are accompanied by a sort of combustion, some of the carbon previously fixed becoming combined during the change with oxygen taken from the air, and thus again forming carbonic acid that is returned to the atmosphere, which is consequently vitiated to a corresponding extent. While assimilation is confined to the green parts and to daylight (or its equivalent), these processes of food elaboration attended by the absorption of oxygen and the formation of carbonic acid occur in all parts and at all times, but more especially in the parts of the plants which are not colored green, and during the hours of darkness, when growth is most rapid. This giving off of carbonic acid during the nutrition and growth of green plants is, in point of fact comparable with the similar release of carbonic acid in the nutrition and growth of mushrooms, yeasts, and other plants which are not green, and of animals, so that it really corresponds to the respiration or breathing of animals by which they vitiate the air. But although the respiration of green plants occurs at all times, the carbonic acid given off as a result in the daytime is far less than that taken up by them for the fixation of its carbon during the same time.

So far as the effect of a collection of plants on the air of a room is concerned, the following statement may, therefore, be made: During daylight they purify the air by removing from it carbonic acid and giving off free oxygen far in excess of the opposite result of their respiration. While at night their influence is exactly that of animals, since their respiration then goes on with even increased force, while the fixation of carbon has ceased. Taking the average of night and day together, however, their effect is to purify the air, because they remove more carbonic acid in the daytime if in good condition and properly lighted than they give off at night. It must be evident also that plants with variegated leaves, or those largely in flower and fruit, will have a smaller balance to their credit than those with abundant green foliage and few flowers, because the variegated plants have a proportionately smaller assimilating power, while repiration is much greater from developing flowers and fruit than from ordinary foliage. So far as even these plants are concerned, however, their average effect is nearly always to purify the air by removing its carbonic acid and adding to its oxygen. With sickly or poorly lighted plants, the balance may be more nearly destroyed, owing to their diminished assimilation; and it is never desirable to have in a sleeping room any large number of plants with a profusion of highly scented flowers, because of their greatly increased respiration and the disagreeable effects their perfume causes on some persons.

Filthy flower pots, or those containing a disproportionately large amount of soil, —especially if richly manured and undergoing decomposition,—constantly give off carbonic acid, and may also, possibly, breed disease germs under some circumstances, so that their condition should be frequently looked to. But the growth of green moss on the pots or the contained soil, which is usually looked on with disfavor, is beneficial unless it implies too great neglect of cleanliness, since the moss plants assimilate.

One other point deserves mention in this connection. All plants bearing leaves are constantly pumping water from the soil and giving it off into the air in the form of invisible vapor. While the amount of water thus evaporated from foliage is largely influenced by the structure of the leaves, which differs much in different kinds of plants, in a general way it may

be taken as proportional to the leaf surface expanded. Our systems of warming dwellings in winter are nearly all open to the objection that the heated air within doors is far drier than the cold air without, colds being a very frequent consequence of passing from one to the other. During the winter, therefore, properly watered plants in our dwelling rooms contribute to no small extent, to keeing their atmosphere from becoming too dry.

W. T.

Naming Plants.

Pellionia pulchra and P. Daveauana are two pretty little creeping plants from Cochin-China and now not infrequent in our greenhouses. They are close-growing, flat-spreading, ornamental evergreen-leaved plants that seem to enjoy moisture, warmth and a little shade. They are allowed to spread on the gravel on the benches, run over on the surface of the earth in pots containing large specimens of other plants, or on indoor rockwork and they make nice basket plants in a small way. They are easily raised from cuttings and a large stock of them can be gotten up in a season.

For a couple of years I have known the plants well, but till the other day couldn't find out their name. I tried botanist and horticulturist without avail. The latter wrote "a kind of peperomia" (as peperomia is a common genus of tropical American plants well known in our greenhouses, evidently this name was a guess from memory of the lost label that came with the pellionia from Europe), but any one with a fair idea of plants would repudiate this name, as the pellionias are nettles and not peppers, as the peperomias are. The botanist replied "nearly allied to pilea." This was right so far as family went. And the scientist was excusable for a closer identification, for the plants are comparatively new and not yet generally distributed in herbariums.

My first introduction to the true name was in the greenhouses of the Agricultural Department at Washington; there I found a plant labelled Pellionia arguta, which I noted and afterwards found to be correct.

Here is food for the Committee on Nomenclature. Suppose we get hold of a real nice little plant of this sort, propagate it in quantity and wish to catalogue it or sell it, but cannot find the name of it, what are we going to do about it? Let me give you a practical illustration: A certain florist raised a large stock of it and got up a nice illustration for his catalogue, but although he tried hard to find out the name of it he couldn't (among others he sent it to myself, but I couldn't help him), so he catalogued it under the name of Mexican peperomia. The name peperomia was given to him as to me and as these plants have headquarters in Mexico and other warm parts of the Americas he thought that name would be about right.

Now I have always contended and I insist upon it still that one of the best things the S. A. F. can do is to provide means of naming unknown (to us) plants to its members. Gardeners, florists or horticulturists—specialists in their several lines—could furnish the names of cultivated varieties of plants, but no gardener or florist is competent to handle genera or species; for these we want the aid of the systematic botanist, and he should be one who has ready access to a large botanical library and herbarium.

Most every state has a state botanist; and as citizens of the state I believe we are at liberty to call upon him for assistance. But when we consider that the material at the hands of these botanists is more the native flora and economic plants and that our garden plants come from everywhere on the face of the earth, one can understand how powerless in many cases our state botanists must be in identifying for us the newer discoveries from tropical regions. But great educational centers, as Harvard College, Columbia College, Shaw's Garden and the Department of Agriculture at Washington, should be perfectly competent to identify any species of plants submitted to them.

The question that now occurs is, could arrangements be made with some one of these institutions to name such plants—species only—as the members of the S. A. F. might submit to it?

One of the ambitions of the S. A. F. is to get floriculture recognized as a division of the Department of Agriculture. This would be to our advantage in many ways. In the matter of nomenclature alone just consider the benefits we would derive, as explained in the following letter anent this subject from Prof. George Vasey, the botanist of the department, and which I publish in the FLORIST with his permission. WM. FALCONER.

U. S. DEPARTMENT OF AGRICULTURE,
BOTANICAL DIVISION,
WASHINGTON, D. C.

MR. WM. FALCONER, Glen Cove, N. Y.:

Dear Sir:—Your letter of the 5th inst. has been duly received.

In reply to your inquiry I may say that I am quite sure in case you succeed in getting floriculture added to the work of the department you will have the assistance of this division in determining any questions as to the names of plants. There has been too much carelessness and guess work as to names used by horticulturists and floriculturists and we shall be glad to give what help we can in rendering unnecessary such mistakes in the future. Of course it will be understood that we are to be furnished with material in the proper condition for investigation. We frequently do this work now for individuals and shall be even more willing to do it for your floricultural association.

Respectfully yours,
GEO. VASEY, Botanist.

Clubs Again.

Does the list of subjects selected for the next convention of the S. A. F. (AM. FLORIST 21 January) strike anybody as being an advance on that of former years? To me (I am speaking only for myself) I must say that beyond one or two subjects perhaps it seems to be about the same old thing we have had for years back and almost any one of the subjects might be heard at any good club meeting and would in all probability be handled just as effectively.

Many of the members have to travel long distances to reach the convention wherever it is held and though there is other business to be done besides listening to essays I do think that a list might be got up that would be productive of more benefit and provoke more discussion among the members. Things were bad enough at Toronto, essays were simply read to probably not half the members present in the city and the discussions afterwards did not amount to a row of pins. I heard many members say "O! well, we shall see it all in the report." Now, if things were like this in Toronto how will it be at Washington where the counter attractions are so much greater? It does really seem to me as if the S. A. F. had got on to a track that led to nowhere. Of course the mere fact of so many of the same profession from all over the country meeting together and exchanging views, etc., is of itself a good thing and tends to broaden men's minds and there is some business to be done in connection with the trade exhibit, but still there seems to be a lack of result from the amount of energy and money expended.

It seems to me that the S. A. F. should act as a sort of mother to all the Horticultural Clubs (yes, perhaps I have a club on the brain), there are many subjects that clubs are forever hammering away at and never settle, could not the S. A. F. do it for them? There are also many subjects that clubs want advice on. Could not the S. A. F. give it? Again, do not clubs want a sort of grand lodge over them to appeal to and to settle disputes and other matters as they crop up. I do not at all know what the feeling is on this subject or whether there is any, but I am pretty sure that if the matter was brought into "practical politics" most clubs would favor some such a project. Then the clubs could have something to say about what the essays and discussions should be about, there would be a rivalry created between them and I think the S. A. F. would get on to a track that led to somewhere and that somewhere would not be a hole in the ground, but the goal that all true horticulturists look to though they may never attain it.

As things are it appears to be a case of "great cry and little wool" as the devil said when he shaved the pig. We have got the gas which was a great improvement on tallow candles, now let us have the electric light. The S. A. F. has done great things in the past, but it must change its gait if it wants to keep up with the times, at least that is my humble opinion. These ideas are no doubt very crude, but everything must have a beginning. A. H. EWING.

Toronto, Ont.

The Verbena Mildew.

In bulletin No. 37 of the Cornell University Agric. Exp. Station Prof. L. H. Bailey says: "The verbena mildew (Oidium erysiphioides), which is often very destructive to house-grown plants, has been held in check in our houses by the use of sulphide of potassium (¼ oz. to a gallon of water). A lot of thrifty and stocky young plants which were badly attacked was divided into two lots for treatment, the lots being placed in separate houses. The treated plants received a spray of the sulphide about twice a week and, although a little of the mildew could always be found, the plants were not injured. The other lot was ruined and the plants died. It is probable that copper compounds, as the ammoniacal carbonate of copper, will be found still more effective, but our simple treatment was so successful that we found no occasion to try any other. This mildew appears upon the leaves and young shoots in white mold-like patches."

Stigmaphyllum Ciliatum.

Noticing in the FLORIST a note by Mr. Falconer on this beautiful vine, I would like to indorse what he says about it, as it is surely deserving of all the praise given it. I have had it planted in a nook of the greenhouse, and the flowers have been greatly admired by visitors. The flowers, when cut, have a resemblance to orchids, and are quite useful for cut flower work. Have not tried it outside here yet. Have found it rather hard to propagate though, only succeeding with ripened wood. Would like to ask Mr. Falconer how it is best propagated.

Minneapolis. GUST MALMQUIST.

Boston.

The cut flower trade has been on a steady jump during the past week. All the florists have been busy and the wholesalers report trade as first class. Roses and carnations have sold well, roses particularly. Violets are rather plenty with a prospect of a drop in price soon. The florists' windows begin to have a spring like appearance, the brilliancy and abundance of the display giving a strong suggestion of the Easter season, although Easter is still a long distance off. Azaleas, Harrisii lilies, cinerarias, ericas and tulips for plants, with roses, carnations, daffodils, nasturtiums, coreopsis, forget-me-nots and violets furnish an abundance of bright color.

Edwin Lonsdale honored the "Hub" with a visit on his way home from the meeting of the Carnation Society at Buffalo. He was kept busy during his short stay by the boys, who were anxious to show him as much as possible of the prosperous establishments in the suburbs.

Lawrence Cotter has a grand lot of lilies, both candidum and longiflorum, which will be just right for Easter. His house of La France and Albany is at present one of the sights of the town. Such a crop of buds is seldom seen.

At Waban Rose Conservatories there is a fine crop of Magnas just coming in. Later there will be several houses of Jacqs, which, if they fulfill their present promise, will be of splendid quality.

W. H. Elliott is watching his asparagus grow. It is making good headway towards the top of that 25-foot house. In the meantime he is cutting a good crop of Gontiers and Brides. His Wabans have been good, but are now off crop. There will be some fine Jacqs here later on.

Sewall Fisher is credited with having produced more meritorious carnations up to the present time than any other man in this country. He has several good white ones which have not been sent out yet and is constantly making new crosses.

R. T. Lombard attended the Carnation Society meeting at Buffalo and says he would not have missed it for anything. He still vigorously asserts the superiority of the Mrs. Fisher over all other white carnations and is prepared to substantiate his claim.

Orchids are coming in quite abundantly now and seem to sell better than ever. Norton Bros. had a dinner decoration this week at which no flowers except orchids were used. The center piece was very handsome. The laurel draping in Horticultural Hall on the occasion of the Bachelors' Ball was one of the finest jobs of festooning ever done in this city. It was done by Galvin Bros.

The G. and F. Bowling Club held its second meeting on Feb. 20. The meeting was followed by a practice game at the alleys of the Boston Athletic Club.

The dinner committee will recommend that a banquet take place on March 31, the price of tickets to be made very moderate, that a large gathering may be assured.

Prof. Sereno Watson, botanist of Harvard College, is seriously ill. He is failing gradually and his recovery is considered doubtful.

Geo. W. Wilson of Malden, well known as one of the oldest rose growers for the Boston market, died at his home on Friday, Feb. 19, aged 78. In the old Bon Silene days Mr. Wilson was a large producer of that popular bud, which he shipped in quantities to New York and Philadelphia. He also grew a great many Jacqs and of late years has made a favorite of the Gontier. He retained his interest in his greenhouse work to the last, even having the material brought to his room so he could make cuttings, after he was unable to go out. He had amassed a considerable fortune through good business management and shrewd real estate investments.

At the meeting of the Mass. Horticultural Society on Feb. 13 Prof. Jas. Humphrey of the Amherst Agricultural Experiment Station gave a practical talk on fungous diseases. The first part of the lecture was an interesting explanation of the algæ and fungi and their relationship to and difference from ordinary flowering plants. The speaker expressed much regret regarding the general haziness of ideas about fungi, which he asserted was due to neglect of proper education in the schools.

Disease in plants he described as anything which prevents the roots, leaves, wood or bark from performing their natural functions and thus interferes with the normal distribution of food material and when this condition results from parasitical fungus sending their fibrous roots into the cells and living tissues of plants, it becomes what is known as a fungous disease.

As to remedies Prof. Humphrey said that they are generally impracticable, for we can hardly hope to kill a parasite without at the same time killing its host. Chance experiments are but wild leaps in the dark. We should investigate the organism in all its details before either prevention or remedy. The real work is to study the fungi themselves and ascertain what conditions check and what favor their development and this settled it becomes easy then to know how to destroy or prevent.

We should not forget that sometimes a fungus accompanies a disease of which it is not the cause; and again, that neighboring plants may be important agencies in propagating fungous disease. Treatment to be effective must be preventive rather than remedial. As a rule a leaf or plant once attacked is lost. Of first importance in preventing are, first, a healthful condition, a strong vigorous plant will resist attacks; second, cleanliness; allow no rubbish about; dead fruit, leaves, etc., are favorable agencies for the development of fungous disease.

Speaking of the Bordeaux mixture and other preparations which are applied to the surface of plants in liquid form, he emphasized the essentially preventive nature of the treatment, for after a plant is once attacked no amount of spraying is of the least service. Powdery mildew, because growing on the surface of the leaf only, may be controlled by vapor of sulphur, but any internal growing fungus cannot be reached by any such treatment.

New York.

The past week has been a busy one all round. Valentine's Day, Purim ball, the Arion ball and a host of other gaieties, public and private, have furnished a brisk demand for flowers of every description. It is fortunate this is so, otherwise prices would quickly go to pieces. Already there are indications that it will take but a few days of sunny weather to work havoc, and Lent is but ten days off. The last week before Lent is always a gay one, however, and it is hoped that the steady run of trade which has favored us this season will at least continue unabated until Ash Wednesday.

Prices of roses have been maintained with a regularity unknown in recent years. Whether this is entirely the result of good demand and we can feel reasonably hopeful that the long looked-for balance between supply and demand has been reached, or whether it is due to short and insufficient crops is not quite apparent, but it has had a healthy influence on the trade nevertheless. The "Greeks," as the street peddlers here are called, have had but little show at the roses this season, and as the carnation has also been out of their reach as a cheap flower, they have been obliged to fall back upon the bulbous stuff or charge respectable prices for other goods.

The retailers are claiming, however, that they have made no money this year and have been able only to hold their own. It would seem, though, as if it were time for the growers to make a little money, which has not been generally the case in recent years.

The demand for the Madame Cusin rose continues unabated and the run on this variety has been almost phenomenal. American Beauties are off crop everywhere, so prices of good specimens are still at a high notch. The small stubby specimens that this variety always produces when out of crop are poor stock to handle, however, and do not bring much more than good carnations, so while good blooms bring from 50 cents to 75 cents each readily the rubbish goes hard at 4 to 5. There is a fair supply of good Brunners, Diesbach and Magnas, good specimens of which sell from $6 to $9 per dozen. Jacqs are getting more plenty and can be bought at from $2 to $3 per dozen.

As to carnations the demand still exceeds the supply and there is no indication yet of any overstock of blooms or decrease in prices. Violets on the other hand are too plenty and as the demand is local and transient the prices fluctuate badly from day to day, some lots of extra quality bringing as high as $1.50 per 100, while at times quantities are sold as low as $5 per 1,000. Lilacs are also badly overstocked at present, an unusual condition. The large mignonette in the market at present does not hold its advanced price above the commoner kind and there seems to be a reaction from the craze for the mammoth varieties at mammoth prices.

Bulbous stuff in general is over-abundant. Harrisii lilies are in such quantities that it is impossible to find a market for them, and the same is true of freesias. Lily of the valley is badly broken in price also. Tulips and daffodils hold their own a little better, but there are too many of them, and the aid of the "Greeks" is necessary in order to unload them. Smilax is suddenly scarce. Good smilax will undoubtedly sell at sight for some time.

Considerable excitement has been caused among the florists by the information from Boston that the big floral piece which the Columbia College boys had commissioned Florist Scallen to arrange and deliver to a favorite actress now playing at the Hub had been refused admission to the theatre. The enforcement of such a rule in the theatres here would mean a big loss to the florist trade.

Pitcher & Manda's great orchid exhibition will be given at Short Hills, N. J., February 29 to March 5 inclusive. The display of Cattleya Trianæ will be something marvelous.

Prof. C. V. Riley lectured before the Brooklyn Institute on Feb. 2 on the interrelation of flowers and insects. The first part of the lecture was devoted to a consideration of the different and curious ways in which the fertilization of plants is brought about and the prominent part

taken by moths, bees, wasps, etc., in the pollination of many species.

The second part of the lecture was devoted to insectivorous plants. By means of the stereopticon the movements, structure and digestive powers of these curious plants were illustrated, and it was shown that most of them do digest and absorb the food they capture, and that there is a remarkable parallellism between the functions of the glands of some of these plants and those of the animal stomach.

Prof. Riley concluded with a masterly argument in support of the theory of evolution in the vegetable kingdom and a corresponding development in the insect world through the past ages, claiming that if it had not been for insect aid in the past we should now see instead of our gorgeous flowers of orchids, lilies, magnolias and roses a vegetation consisting chiefly of ferns, cycads, conifers, willows, alders and rushes.

Baltimore.

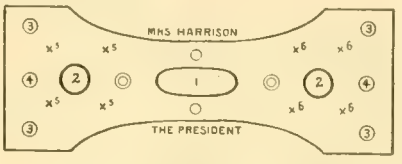
Business has been a little quiet this week say the most of the dealers, though many think the season as a whole, so far, an improvement on last year.

Mr. Robt. J. Halliday in his new store No. 111 North Charles street, is one of these, and looking around his new quarters it seemed as if he had a perfect right to say it. That the trade is advancing rapidly is evident from the number of new stores opened in the city every year, all of whom must make a living or they would quit. Galloway & Cristie have opened one at No. 8 Charles St. Avenue.

Then again there is every year an increase in the glass of growers. Even though the complaint is heard: "Oh, there's nothing in it. It is overdone." Yet the tearing down of commercial houses is a rare sight unless for the purpose of erecting new and larger ones. Even when some wary capitalist concludes to save at the spigot of his greenhouse what he wastes at the bunghole of horse races and stock gambling, there is always some one to buy the said greenhouses and put them to account in making an honest livelihood.

The schedule of premiums for the chrysanthemum show is being distributed and shows the effect of two years experience. To say that it is in every way an improvement on those of the past years is the very least that can be said of it. One specially meritorious feature is that the prizes for commercial florists, amateurs employing gardeners and amateurs not employing gardeners are carefully segregated in three classes.

The list contains prizes for all other plants that will probably be in condition for showing at the same time with the "mums," and while the size of the premiums is still necessarily below those offered by some of our neighboring villages who have been at it longer, they are such as would have terrified the cautious ones three short years ago.



The Gardeners' Club has concluded to try holding a banquet and general reunion of the craft after the annual election of officers which takes place early in March. If some plan could be devised to make it free to all, so that the least as well as the greatest of those interested in floriculture might partake, it would undoubtedly do much good and swell the membership list; as it is it will no doubt be enjoyable, and perhaps afford a little entertainment to those who hear tell of it.

Prices are low here at present, first class La France bringing $8, Perles $6, violets 50 cents a 100, callas 75 cents a dozen, tulips $3 to $5, Roman hyacinths $3, carnations $1 to $1.50 a 100; other stuff in proportion. MACK.

Washington, D. C.

The annual dinner given by the President to the Diplomatic Corps is generally looked forward to by our foreign friends here as *the* event of the season, as the White House on that occasion more than on any other puts on its choicest colors and more elaborate floral attire. This year orchids were selected, or rather, twelve months ago it was determined that orchids should reign supreme at the 1892 diplomatic dinner, and consequently Pfister all this time has been marshalling his forces in the orchid line, and on the 2nd inst. brought out an array of superb blooms and plants that must have astonished the diplomats.

The several parlors on the first floor, including the East room and corridors, as usual were liberally supplied with foliage plants interspersed, however, on this occasion with a profusion of azaleas, Harisii lilies, primulas, cinerarias, amaryllis, freesias, bletias, hyacinths and tulips. In the state dining room groups of palms, Ficus elastica, marantas and different varieties of potted ferns adorned the corners and window recesses, relieved by bright foliage plants and an abundance of choicest cut flowers. The table, which was laid for forty covers, had the following form:

The floral decorations of the table consisted exclusively of orchids. The large oval centrepiece (No. 1), four feet six inches long, was filled with Cattleya trianæ and Adiantum cuneatum; at either end of this stood two pyramids of fruit tastefully arranged; next (2, 2) were two large circular pieces composed of dracænas, crotons and maiden-hair ferns, the centre plants being fine specimens of Ananasa sativa variegata three feet in height, cypripediums being interspersed among the ferns; four baskets (3, 3, 3, 3) at the four corners of the globe were filled with Dendrobium nobile and ferns, while midway between these (4, 4) were baskets filled with Phajus grandiflora, dendrobiums and ferns.

In place of corsage bouquets the ladies received as souvenirs a corsage bow of ribbon of a color to match the Cattleya Trianæ. On one lapel the south front of the Executive Mansion was printed, while on the other lapel the lady's name and the date in gold letters appeared. Each gentleman had beside his plate a boutonniere of Dendrobium Wardianum on a fern frond. The two crystal chandeliers and the three large mirrors in the state dining room were trimmed and festooned with smilax. Z.

Buffalo.

The carnationists have come and gone and the lively ripple they caused among the local fraternity has passed away. Most of the visitors stopped in town the following day and many of them visited a few of the city greenhouses. The worthy president, Mr. Lonsdale and Mr. Stewart of Boston called on the boys. Canada was well represented by two of her best growers, Harry Dale of Brampton and Walter Muston of Toronto; and most of the towns in western New York sent one or more delegates. Mr. E. G. Hill, who failed to make connections somewhere and who was missed at the meeting, arrived in the city the next morning and was shown the "remains" of the carnation display. Mr. Fancourt and his friend Mr. Long of Wilkesbarre did the falls the following day and they seemed to have been greatly impressed with the Niagara spray. There are several kinds of spray in that vicinity and your correspondent could not readily perceive which kind received their greatest attention.

There is certainly much to be learned about exhibiting carnation blooms, or rather how to keep them on exhibit. As soon as unpacked the flowers were put into glasses and their stems in water. The room was small and crowded, but certainly not more so than rooms often are at parties and receptions. Yet in less than twenty-four hours every flower was utterly collapsed. Those coming from a long distance might have been expected to wilt soon, but those exhibited by some local growers, which were picked fresh that a. m., were in equally bad condition as those that came 600 miles and that must have been picked two days earlier than the home grown flowers.

The Buffalo men all unite in thinking the meeting a most instructive and profitable one and we hope for the visitors an enjoyable one. The local florists, who felt real sorry to part with their visitors, have had their drooping spirits somewhat revived by the presence of three hustling agents of big firms, Mr. Walter Mott of Henry A. Dreer, Mr. Killen, representing J. C. Vaughan, and now with us we have the retiring but talented young man Mr. Harry Bunyard of Pitcher & Manda's great house. How cheering to have these gentlemen call and tell you "how nice your place looks." It puts vim into us.

In spite of sloppy, dull and dirty weather business has been very good and flowers of all kinds, though plentiful, have been well used up. A Main street florist supplied for a wedding last week six hearts of violets, carried by the bridesmaids, using up several thousand flowers.

G. S.

Wm. Scott's greenhouses are in splendid condition at present. Azaleas, cinerarias, primulas, cyclamens, violets, tulips and daffodils are all in bloom. The Chinese primroses are from Kelway's seed and are a fine strain. There is a big crop of callas, Harrisii and candidum lilies in prospect for Easter, and calceolarias promise well. Among the rarities are some fine dendrobiums and Acasias Drummondii and armata. Mr. Scott has caught the carnation craze, evidence of this fact being apparent in the rows of little pots with big numbers attached.

St. Louis.

Our retail men report business good with a good prospect for next week. Roses of all kinds still in demand. Funeral work somewhat lighter, but for other set work there have been some large orders, among them being an order for a large bouquet of 150 roses in some six or eight sorts filled by Sanders & Beneke, and a large table decoration in which 100 Am. Beauties were used, filled by Mr. Weber. Roses are off crop now with many of the growers.

There seems to be a remarkably good showing for specialists in this city. We can grow good roses and carnations and

why send east for stuff that often disappoints on account of delays and lack of freshness. An agent of Pitcher & Manda's was doing the rounds on Saturday.

J. W. D.

Philadelphia.

Messrs. Harris and Craig have just returned from a two-day's trip through the carnation belt, and report the girdle sadly in need of repair, it being very rusty in spots; portions of it, however, were quite bright, notably in the vicinity of Chambers Brothers, whose plants are in fine condition and flowering abundantly.

At Dingee & Conard's rose nursery everything looked prosperous. One million plants are to be seen in all stages of growth from the cutting bench to plants ready for mailing, which is their principal business. Their spring trade is just commencing, and an idea as to the magnitude of their business may be gathered from the fact that their mail now numbers over 1,200 letters a day.

During the recent troubles of the Ferguson Brothers, John Westcott advanced money to help them out, and as a result at the sheriff's sale of their place recently, was obliged to buy it in to protect his interests. His brother William, now on North 2d St., will remove to and conduct the business, as John, who is a dealer, does not want to be a grower also, his interest in the city store demanding his whole attention. It should certainly be a good stand, being adjacent to two large cemeteries.

Robert Craig has just completed a house 20x100, "to make it warm for his crotons," so he says, he having a large stock of these plants coming on.

Trade the past week has been lively, plenty of business and good stuff to do it with makes the average florist happy, and that has been the condition of things lately.

Flowers as a rule have been fine and in good demand. Prices are about the same; perhaps a shade lower.

In the bowling tournament things are getting red hot. McLean, Kennedy and Heron are leaders in the order named in the first class with only 3 pins between them, while 3 others are within 60 pins of them, and there are still 5 series to come, in which there may be many changes. In the second and third classes there is, we believe, no change, the present leaders holding their own.

Toronto.

The Gardeners' and Florists' Association held its monthly meeting on the 16th and as usual it was a lively one. The prize list for the chrysanthemum show in November next was the topic that created most interest. The "single stem" fad was again to the fore and this year the advocates of that system showed a decided falling off and those who felt strongest on the subject were not uninclined to meet the opposition half way. To me the whole thing seems to lie in a nutshell; we want a good show, we want the best plants that can be grown at the show, if they can be grown better otherwise than on single stems by all means let them be grown the better way; why should it be a matter of compulsion to grow them one way only? But these old fashioned notions do die so very hard. There will be another silver medal for competition, but for what section has not been decided yet.

The flower table was richly adorned at this meeting with orchids and other beauties. Mr. Thos. Manton brought blooms of two varieties of the white Cattleya Trianæ; Mr. A. McPherson, gardener to Col. Sweeney, brought a Jacqueminot colored seedling carnation, a cross between Portia and Silver Spray, large, well formed and strong of stem; Mr. Geo. Vair brought some single blooms of extra large and bright colored cinerarias, a spray of the hanging basket Begonia glaucophylla grandiflora (I think that is right), blooms of Lycaste Skinneri, L. aromatica, Cœlogyne flaccida (smelling strong of the stable) and others. Mr. Hollis brought blooms of Cyclamen grandiflorum, pink and white, which for size and color could not be beaten; they were taken from plants 15 months from the seed.

It was suggested that at the next meeting members should bring specimens of any flowers the names of which they did not know or had forgotten and I think an interesting half hour will be the outcome.

From some cause or other for which no doubt forty reasons could be given by forty different florists, trade has not been up to the mark this last week, but expectations are high for next week—the week before Lent.

The association has changed its night of meeting and it is now held on the third Tuesday of the month. This being a pious city and the gardeners and florists thereof being especially pious people, it was found that the prayer meetings usually held on Wednesday evenings made it inconvenient for many to attend the meetings of the association. I have no doubt that those of your readers who were here last August can quite believe this.

E.

Cincinnati.

The February meeting of the Cincinnati Florists' Society was one of the most enthusiastic meetings that we have had for a long time. Chrysanthemums and chrysanthemum shows were largely discussed and J. A. Peterson favored the society with a paper entitled "The Cultivation of Chrysanthemums." The preparations for our show are advancing rapidly and we shall endeavor to have the best show that has ever been given in Cincinnati, the details of which I shall have the pleasure of giving you later.

Trade is exceptionally good in all branches of the cut flower business and stock is very scarce. Hybrid roses are beginning to show their faces at the wholesale houses. Orchids are coming into bloom nicely and so far the supply has equalled the demand.

E. G. GILLETT, Sec'y.

Chicago.

Emil H. Mailander, the West Madison St. florist, died Feb. 21, after a brief illness, aged 26 years. He was married only six months ago. He was a strong looking young man, and his death was a great shock to his friends, none of whom had expected a fatal termination of his illness.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—As a cut flower worker by a young man 21 years old; 7 years' experience. Address C. DORSEY MISH, Lebanon, Pa.

SITUATION WANTED—By young man in a wholesale establishment, to learn the trade. References. Address Box 312, Waynesboro, Pa.

SITUATION WANTED—By a florist and gardener; German; age 32; small family; strictly temperate; 19 years in the business First-class reference. Either private or commercial Address FLORIST, East Moriches, L. I., N. Y.

SITUATION WANTED—By a first class man, as head gardener; have had 20 years' experience in Europe and America; understand all plants, orchids especially; have laid out some of the foremost places in the country. Address S. J. F., care Am. Florist.

SITUATION WANTED—By a thorough, practical florist, fully competent to take charge of a large commercial place. Has had experience in leading places in England and the States. First-class references. Good wages expected. Address COMPETENT, care American Florist.

SITUATION WANTED—On private place as foreman by first-class florist and landscaper; thoroughly competent to take charge of large place; 20 years' experience. Married, no family. Best of references. Please state wages. WM. MILLER, 1019 7th St., N. W., Washington, D. C.

SITUATION WANTED—By a practical gardener and florist, competent to take charge of a large place where roses, carnations, violets, smilax and bulbous stuff is grown; experience in making up, 22 years in the business, sober and good disposition, aged 42; have a son, a hustler about greenhouse, can steamfit and run steam boiler, aged 19. Address R, care Am Florist.

WANTED—Good man to work in greenhouse. Steady position. R S, care Am. Florist.

WANTED TO RENT—Greenhouses, dwelling and some land near market. Address WISE, Mt. Prospect Ave., Newark, N. J.

WANTED—Boy or young man with some experience in greenhouses. State wages and experience. Address GEO. S. BELDING, Middletown N. Y.

WANTED—Competent man to take charge of cut flower and plant departments in commercial greenhouses; must be a good rose grower. State wages CRABB & HUNTER, Grand Rapids, Mich.

WANTED—A young man for general greenhouse work; must have some experience. A good potter, with some experience in making up, preferred. State wages, etc. Address D. B. WOODRUFF, Macon, Ga.

WANTED—Rose grower. I want a man to take charge of rose houses at Kansas City, Mo., June 1st. Must be competent, sober, honest and reliable. Must come well recommended. None but a first-class man need apply Address N. S. GRIFFITH, Independence, Mo.

WANTED—At once, as foreman, a thoroughly competent plantsman, experienced in growing of usual assorted stock for cut flowers and plants for a general shipping trade. Also an experienced and capable assistant Must come well recommended. Apply to CURRIE BROS., Milwaukee, Wis.

FOR SALE—Five greenhouses and stock on large lot, location best in the city, with a good trade. Address WM. MILLER, box 99, Chillicothe, O.

FOR SALE—At great bargain, all or any part of 200 glazed door and window frames; just the thing for greenhouse use. CHICAGO FORGE & BOLT CO., 40th St. and Stewart Ave., Chicago.

FOR SALE—150 feet frontage, 164 feet deep, only 4 miles from Chicago, Ill., with three greenhouses in full stock, and a neat six room cottage. Apply for particulars, O F, care American Florist.

FOR SALE—Two greenhouses, well stocked with general line of plants in healthy condition; good dwelling house, wind engine and 3 to 5 acres of good land; natural gas; town of 5 000. For further particulars address P. O. box 430, Portland, Ind.

FOR SALE—My florist business, dwelling, hothouse well stocked; good trade; smart city; best location. Come and see. Low price; half purchase money may remain on mortgage. Sickness. LEWIS R. FOX, Gloversville, N. Y.

FOR SALE—At the low figure of $2000, a well established florist business located in the heart of the city of Portland, Oregon, containing 4,500 square feet of glass, well stocked, and dwelling house, with store. Rent $30 per month. For further particulars write to P. HEFTY, Portland, Oregon.

FOR RENT,

ON ACCOUNT OF BAD HEALTH.

Ten greenhouses with stock. This is one of the best places in the United States for shipping purposes. You can ship plants all through the South in Jan and Feb'y in open boxes, and that is a great advantage to a florist You can establish a very large shipping trade from here south, as it is a great point to ship cut roses, as a man can ship all the roses he raises to Mississippi, Louisiana and Texas, and all other principal cities. There is one drawback to shipping roses from the North here—it is too far. This place has a large local trade and has been established since 1868, and is all heated by low pressure steam. We will be ready to rent by the 1st of June—with or without stock—and that is plenty time to plant your roses. Those that are planted in July produce more roses for the holidays than any other time. This is a good chance for a man to get a big start on a little money For further information, apply to H. MOORE, 54 Beal St., Memphis, Tenn.

Please mention the AMERICAN FLORIST every time you write any of the advertisers on this page.

ROSES.

A Chance to Triple your Money.

NOW READY. (Safe Arrival Guaranteed.)

50,000 ROSES, from 2-in. pots, $3 per 100; $30 per 1000.

Plant in 3 inch pots, and they will bring you from 10c to 15c each readily.

50,000 ROSES, from 3-in. pots, $5 per 100; $50 per 1000.

Plant in 4 inch pots and they sell readily from 20c to 25c each.

N. B.—Our stock is not forced nor are the plants long and drawn, but have an abundance of leaves and roots.

Varieties you can select from by the 100 or 1000, provided one or the other sorts is not sold:

Agrippina,
Archduke Charles,
Aline Sisley,
Archduchess M. Immaculata
Bon Silene,
Chas. Rovolli.

Address THE AMERICAN FLORIST CO., Chicago.

A Mischievous Bill.

The following bill was introduced in the House of Representatives by Mr. Caminetti of California, on January 15, and after a second reading was referred to the committee on agriculture.

A BILL.

To prohibit the interstate transportation of trees, plants, vines, or other nursery stock infested with scale insects, or codlin moths, or other pests, or with their eggs, or larvæ, or infected with any diseases injurious to trees, plants and vines, and the importation into the United States from any foreign country, of any thereof so affected; to provide for penalties for violations thereof and defining the duties of certain departments of the United States with relation thereto.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that every person who, either as owner, agent, or otherwise, shall ship or offer for shipment on any railroad, ship, steamship, express, wagon, or other mode of transportation, consigned to any point in the United States beyond the boundaries of the State, Territory, or District in which such shipment is offered for transportation, any trees, *plants*, *vines*, or other nursery stock infested with scale *insects*, or codlin moths, or *other pests*, or with their *eggs or larvæ*, *or infected with* any *diseases injurious* to trees, *plants* and *vines*, shall be deemed guilty of a misdemeanor, and on conviction thereof, shall be punished by fine not exceeding one thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court

SEC. 2. That every railroad, ship, steamship, express, wagon, or other transportation company or corporation carrying or transporting freight from one state to another that receives for shipment or transportation, or has in its possession in its cars, stations, depots warehouses, or other place of storage awaiting transportation as freight or otherwise, when consigned to any point in the United States outside of the boundaries of the State, Territory, or District where same may be offered any trees, plants, vines, or other nursery stock infested with scale insects and codlin moths or other pests, or with their eggs or larvæ, or infected with any diseases injurious to trees, plants, or vines shall, for every violation of this section, be liable for and forfeit to the United States a penalty of one thousand dollars. This penalty shall be recovered by civil action in the name of the United States in the circuit court of the United States holden within the district where the violation may have been committed, or the company or corporation has its principal place of business and it shall be the duty of all United States district attorneys and their deputies, and all United States marshals their deputies and subordinates, to prosecute all such violations which shall come to their notice or knowledge.

We ask our readers to examine the above bill carefully, especially the portions in italics, and consider what will be the effect of its passage on the horticultural interests of this country.

To extirpate injurious and troublesome insects, to prevent as far as possible their spread and to punish criminal disregard of the general welfare by unscrupulous dealers, is a laudable and commendable undertaking. But when the proposed remedy carries with it the virtual extinction of the plant shipping trade as the above bill plainly does and the contemplated destruction applies with equal effect to the insects and to our business it is time to sound the alarm and use every honorable means of concerted action to prevent the enactment of such ill-advised legislation.

Who is to determine whether apparently healthy stock is free from disease when experts disagree? Under the above proposed law railroads and express companies would undoubtedly refuse all shipments of plants and trees in order to protect themselves from possible penalties for infractions of the law that they could not possibly guard against and as a result the whole shipping trade would be blotted out.

OBITUARY.

MRS. MARY E. LANE, wife of John Lane, Esq., of Chicago, passed from earth Feb. 17 at the age of 62. It will doubtless be a matter of surprise to many who knew her to learn that she was one of the little company who sought the shelter of old Fort Dearborn during the Black Hawk war of 1832.

She was married in 1847, and her husband retiring from active business many years ago, devoted much of his leisure to the culture of flowers as a pastime, and was thus enabled to surround her daily with the beauty and fragrance in which she so delighted. A devoted wife, a loving mother, her memory will be a perpetual perfume to those who knew her best.

H.

BARBARY THORN (Lycium barbarum).—Mr. James Nisbet, Pawtucket, R. I., writes: Apropos of your note in the FLORIST, page 461, I would like to call attention to this vine (now almost extinct here) and remind you that the berries are poisonous. I would also suggest that it is useful to cover embankments or sandy places where it is hardy.

Mention the AMERICAN FLORIST when writing advertisers on this page.

Cycas Leaves

fresh cut, fine fronds, at $1.00 each, net cash. Natural, prepared to retain their fresh appearance, in four sizes, at 25, 40, 50 and 60 cts. each; quite a reduction if bought by the original package of ten.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

The North Carolina Seed Law.

Seedsmen, retail merchants and purchasers of seeds will take notice that the last legislature passed the following law:

CHAPTER 331 LAWS OF 1891.

An act to protect seed buyers in North Carolina. The General Assembly of North Carolina do enact:

Section 1. That any person or persons doing business in this state, who shall sell seed or offer for sale any vegetable or garden seed that are not plainly marked upon each package or bag containing such seed the year in which said seed were grown, shall be a misdemeanor and upon conviction thereof shall be fined not less than ten dollars or more than fifty dollars, or imprisoned not more than thirty days, for each and every offence. Provided, that the provisions of this act shall not apply to farmers selling seed in open bulk to other farmers or gardeners.

Section 2. That any person or persons who shall, with intention to deceive, wrongly mark or not label as to date any package or bag containing garden or vegetable seed, shall be guilty of a misdemeanor and upon conviction thereof shall be fined not less than ten nor more than fifty dollars, or imprisoned not less than ten nor more than thirty days.

Section 3. That this act shall be in force from and after the first day of September, 1891.

Ratified March 5th, A. D. 1891.

The objects of this law are, firstly, the protection of innocent purchasers from being defrauded by having stale and deteriorated seeds palmed off upon them; secondly, the protection of honest and careful seedsmen and retailers who handle their seeds from unscrupulous competition. It is hoped that seedsmen and merchants will cheerfully comply with the requirements of this law.

GERALD MCCARTHY,
Botanist N. C. Agric. Exp. Sta.
Raleigh, N. C., Feb. 15, 1892.

LONDON, ONT., Feb. 19.—Mr. James Griffin, the well known seed merchant, committed suicide at his home on the Wellington road, over Clarke's bridge, this morning. Mrs. Griffin in an interview said that ever since her marriage 14 years ago her husband has met with business troubles. A few years ago he was burned out and lost considerable. Of late he has grown somewhat despondent, but continued to attend to his business at his store on King street. He was in rather poor health as well. He came home about nine o'clock in the morning and told his wife he had taken strychnine. Before a doctor could reach the scene he was dead. Deceased was in his 72d year and for 34 years he was a resident of London, and at one time one of its most prominent citizens. He was always held in the very highest esteem as a man having many good qualities. He came here from Bristol, England. He was twice married, but had no children by his second wife. He leaves two sons and a daughter.

LATE REPORTS from eastern mail trade show a falling off from 1891. All are looking for a good March.

IMPROVEMENT SEED CO. of Rochester, N. Y., are requested to send us their local address, which is asked for by a subscriber.

AMERICAN catalogues to Canada can be invoiced as merchandise and freighted to Canada. Wrappers shipped with goods, then after duties are paid, mailed as printed matter with Canadian stamps.

PHILADELPHIA.—Z. De Forest Ely gave a dinner last week, the ninth anniversary of the establishment of his business. Messrs. Johnson, Maule, Burpee and others were present. Over the walnuts and the wine interesting discussion of important trade matters was had.

MANY of the European growers are unwilling as yet, to quote prices for some of the popular varieties of forcing tulips, such as Yellow Prince, Morello and Cottage Maid, and will not even agree to deliver on the basis of last season's acknowledged high prices. Double Von Sion narcissus also shows a strong tendency upwards.

JOHN E. MOYER, of Dixon, Ill., prefers to grow onions by the new method of sowing the seed in hotbeds about the first of March and transplanting the seedlings from four to six inches apart in rows one foot apart. The transplanting is done as soon as the ground works in good condition. On the Iowa college grounds this was tried the past season and the conclusion was reached that any one can grow onions in this way from seed with as much ease and certainty as from "onion sets." If no hotbed is available the seed can be sown early in boxes.

New Bedford, Mass.

The regular meeting of the Gardeners and Florists' Club, held Feb. 8, 1892, was largely attended. The principal business was the preparing of the premium lists for the chrysanthemum exhibition, to be held this fall. The Club this year has added over $100 more than last year to its premium-lists, making a total of about $250, besides the Silver Cup, that has been won by two different parties the past two years. There seems to be quite a rivalry between those that have had the cup, for if either of them gets it this year, it becomes his property.

We also had a discussion on the violet. The members were about equally divided on the question of growing violets in cold frames or in heat. But as to the violet disease they all agreed that the cause and the remedy are as yet unknown.

The club now meets the 2nd Monday of each month. GEO. C. BLISS, Sec'y.

Cleaning Chimney Flues.

After reading C. H. Gleason's method on page 536 of January 28th, I will give mine which I think is far superior. I have a thimble inserted in the flue near the boiler with a lid that can be taken out and replaced in a few seconds, and another at the other end. The wiper is made of limbs from a cedar or Norway pine attached to a strip 1x2 inches, 4 feet long with a hole in the end for a bolt to attach it to the main pole made the full length of the flue. By having the wiper separate I can run the pole through from the farther end and attach the wiper which saves carrying the pole to the other end. If houses are so arranged that the pole can not be drawn through full length, bolts can be used at each splice instead of nailing them together and folded as the lengths come through. The coal we burn makes it necessary to clean the flues every week and by this method it is done in about 10 minutes.

S. H.

In the FLORIST for January 28 I noticed an article upon how a certain florist tried to get a string through a flue. Had he opened the flue at the chimney end, or rather opened the chimney on the opposite side from which the flue was connected with the chimney, then made an opening at the boiler end that would have been all that would have been necessary. He could then have taken some poles, fastened them together with heavy cord, until he had the desired length, and then pushed them through from the most convenient end. When the end of the pole had reached the farther end of the flue he could have tied his bag, or better, brush, upon it and pulled it through. The operation could have been repeated as often as necessary to clean the flue thoroughly and the time taken to open the flue and clean it and replace the bricks would have been much less than if done in the manner which he describes. If he will try this method he will soon discard his string apparatus.

Chicago, Ill.

ROSES AND PALMS A SPECIALTY.

New Double White Daisy Snow Crest.

—)o(—

A most distinct variety and an improvement on all existing sorts. Its habit of growth and size of flowers, in comparison with older varieties, is gigantic. The flowers, which are borne on stout, stiff stems from 6 to 10 inches long, are of the purest white and full to the center. When fully developed they rise to a conical or sugar-loaf form, and well grown specimens will cover a silver dollar.

It makes an admirable hardy garden plant or may be forced for flowers under the same treatment as violets. $2 per doz.; $15 per 10

Dreer's Quarterly Wholesale List now ready; mailed free to the trade on receipt of business card.

AND

LUDWIG & RICHTER, Florists, ALLEGHENY, PA.

Pittsburgh, Jan. 20, '92.

MR. JAMES SEMPLE, Bellevue, Pa.:

I consider your Asters "Mary Semple" and "Semple's White" the finest strain without exception, that I ever saw. Yours truly, N. PATTERSON.

Allegheny, Pa., Jan. 30, 1892.

MR. JAMES SEMPLE, Bellevue Pa.:

We can tell every florist in the country it is the best Aster in cut flowers for florists' use; has long stems and in good colors. LUDWIG & RICHTER.

Allegheny, Feb. 1, '92.

After years of careful selection of the most perfect flowers of Asters saved for seed, Mr. J. Semple has brought this fine strain of Asters up to perfection. The fine perfect flowers, long stems and delicate colors make this a perfect gem of Asters. As I have seen them growing in the field must pronounce them the finest sight that ever came to my notice of Asters. WALTER HARVEY, Florist.

"Decidedly the best Aster we have seen." AM. FLORIST, Sept. 24, '91, page 141.

Exhibition Rules.

ED. AM. FLORIST:—Please give your opinion on the following: 1. In the schedule for our last exhibition prizes were offered for "Best center-piece for dinner table, chrysanthemums to be the only flowers used." Some of those who entered used flowers grown by others though the regulations state that all flowers exhibited should be in possession of the exhibitors four months. Does this apply in the above case?

2. If an exhibitor lacks sufficient plants to make up the number required by the schedule is it not dishonorable for him to borrow from another grower to fill out?

SUBSCRIBER.

[1. In the copy of the schedule sent us we find no requirement as to ownership except rule No. 4 which reads: "Plants exhibited by growers must have been in their possession at least four months." This is certainly plain enough and we do not see how it can possibly be made to include flowers used in a table center-piece. 2. Certainly. This is a distinct abrogation of the rule we have quoted above. Unless the plants were borrowed more than four months before the show and were in the possession of the borrower during that time, which is very unlikely indeed.—ED.]

The Violet Disease.

I would like to say another word on the violet disease which Mr. Humphreys has called out by his remarks on page 521. Mr. Humphreys thinks I may have something more to say, but it will only be to emphasize what he says and especially this: "Light porous soil should never be used and if nothing but sandy soil can be obtained then just the top spit or sod should be used." I might add have it fresh every year.

In my first communication I stated that I had always been successful with violets until this fall and that last May I planted out my stock giving to a friend near me what I had left over. His prospered, mine failed. Since then I have learned that my friend's violets were planted in some fresh top soil taken from where a heap of manure had been standing all winter. I had to change the location of my frames last spring and I am now well aware that the soil was not fresh and besides it was light and porous in the new position. Considering that the plants were the same at the start in both cases, as well as atmospheric conditions through the summer, I can only conclude, in the light of what Mr. Humphreys says, that my failure was due to a light soil. If not, I give the conundrum up.

1,200 BEST DOUBLE FEVERFEW.

ROOTED CUTTINGS $1.50 a hundred, or $15 for the lot.

HENRY KRINKLE, 43 Jessamine St., St. Paul, Minn.

A Remedy for the Fuchsia Bug.

The insecticide known as Little's Antipest is worthy of a trial by every plant grower in the land. I confess I lacked faith in it for some time, but as the fuchsia bug (Graptodera exapta) seemed to grow fat on all other remedies I was induced to give it a trial, which resulted in success, one application destroying nearly all, while the second application rid the plants of the pest. The bug seemed to be very fond of the Mexican primrose, both inside and out, but persistent use of antipest destroyed both larvæ and mature insects so we are entirely rid of the pest. I deem it a boon to growers of fuchsias and all plants belonging to the onagraceæ on which this insect feeds. I have had beds of godetias entirely destroyed by them. The above is unsolicited and without the knowledge of those offering antipest for sale, but I take pleasure in recommending it to all. E. S. MILLER,
Sup't for John Lewis Childs.

Root Knot on Begonias.

There is no cure for the root knot. The best thing to do is to put in the cuttings and burn the old plants. The root knot can be prevented by baking the soil. If this is not convenient, sprinkle some lime with the soil before using. If there are nematodes in the soil you will see them jumping around. Also, water the plants with lime water every eight or ten days. ROB'T SHORE.
Ithaca, N. Y.

Sow Bugs.

Can some reader of the FLORIST tell me how to rid my place of sow bugs? I keep them down to some extent by killing them by dozens or hundreds at night, but if there is a way of wiping the entire colony out, would like to be informed. They climb upon the plants and eat the carnation flowers and make themselves generally unpleasant. S.

We will print your spring trade list on this page and circulate it to 5,000 buyers for $42.

BEGONIAS
ARE THE

Mention the American Florist when writing to advertisers on this page.

News Notes.

ELMIRA, N. Y.—A. T. Rice, florist, has failed.

NEW ORLEANS.—Mr. R. Maitre is a sufferer from the all prevailing "grip."

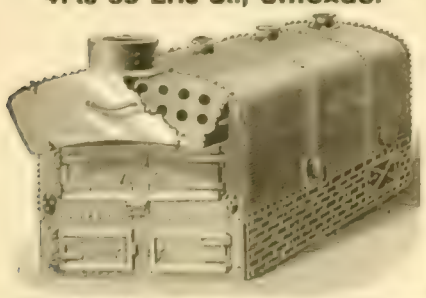
TOLEDO, O.—A. M. Sheen retires from the firm of J. G. Gartner & Co., florists.

AURORA, ILL.—W. L. Smith suffered a loss of about $1,000 by fire in his greenhouses Feb. 13. No insurance.

MILWAUKEE.—It is generally understood here that Mr. E. H. Hunt, of Chicago, is about to open a branch in this city.

BRISTOL, R. I.—The greenhouses of G. S. Congdon were almost totally destroyed by fire on Sunday forenoon, February 14. Loss about $1,800, partially covered by insurance.

BURLINGTON, VT.—Trade has been light since the beginning of January except in cut flowers and designs for funerals. The demand for bunches of long stemmed flowers is displacing much of the design work here.



YONKERS, N. Y.—The greenhouses of J. W. Cahill took fire from a defective flue on the evening of Feb. 12 and were badly damaged, the loss being estimated at $2,500, $2,000 on the stock and $500 on the buildings.

MONTREAL—Mr. A Martin has taken Mr. Wm. Evan's Broadland Nurseries, overhauled the old houses on the place, and built two new houses, each 150x18, one to be devoted to carnations and the other to roses.

CINCINNATI.—The 15-year old son of W. C. Cook was recently very seriously injured through the accidental discharge of a revolver in the hands of a boy companion. He is in a precarious condition and even if he should recover from the wound he will lose the sight of one of his eyes.

MINNEAPOLIS.—Trade has been very good since the holidays. Flowers have not been very plenty, but the sales have been good and the prospects for a lively spring trade are excellent. The executive committee of the Society of Minnesota Florists met in St. Paul on the 6th inst. and prepared a programme for the semi-annual meeting to be held in St. Paul March 9.

KROESCHELL BROS.
IMPROVED

THIS IS LAST CALL for advs. in our special spring number to be issued next week. If you want an announcement in this issue mail same to us at once or you will be too late. We shall mail copies of this issue to every name on our new directory list. If you have anything to sell to florists, nurserymen and seedsmen you will miss it if you fail to have an adv. in this special number.

Some of the Seed Novelties

BY WM. FALCONER.

SWEET ALYSSUM, LITTLE GEM.—Not uncommon as a plant. Neat, compact, long blooming and very desirable. But it seldom happens that these dwarf forms when raised from seed retain as even and compact a form as when perpetuated by cuttings.

ASTERS.—Again Comet leads, and now we have blue, rose, carmine and white flowered varieties; the white leading as this year's novelty. Candelabrum asters come from France and are a race of the dwarf chrysanthemum order whose flowers are arranged around the central stem candelabrum-like and somewhat after the style of the Diadem asters. New Globe Quilled aster is "3 to 4 inches and double, of good globular form" * * color "white with a blood-red center." The Mignon and Jewell asters are again offered as novelties. I grew them last year and was very well pleased with them. Among the Jewell or globe asters rose-and-white is the novelty this season.

TUBEROUS ROOTED BEGONIAS.—Both in the line of plants and seeds the tuberous rooted begonias are having a big boom this year. Avoid cheap stuff. Good begonias are not sold at a low rate, and poor begonias are wretched stock and will disappoint and alienate your customers. The best singles run from 4 to 6 inches across, and the doubles from 2 to 4 inches. A race whose blossoms are striped and flaked like a carnation is offered as a novelty. The ground color is crimson, orange or pink and the stripes yellowish white, or a suffusion of the body color. In the future we may expect to have flowers with a netted variegation, as I see A. L. Rosseel, of Belgium, has got such a strain. And varieties whose blossoms are margined by a different color from the ground one, also frilled-edged flowers are being worked up by our specialists.

BEGONIA BAUMANNI is a new tuberous rooted species from Bolivia that is expected to revolutionize the whole set of tuberous rooted garden varieties by imparting to them its delicious fragrance. Our American specialists have already got it and are working it for dear life hybridizing their stock. It has large, showy, rose colored flowers and forms unusually big tubers, but so far it hasn't displayed the remarkable sturdiness we hoped to find in it.

BEGONIA SEMPERFLORENS atropurpurea also named Vernon.—We all appreciate B. semperflorens rosea as one of the best of flowering begonias either for the greenhouse or flower garden; Vernon is a variety of it with its every good quality. It has brilliant orange-carmine flowers and reddish tinted foliage. Blooms freely the first year from seed.

BEGONIA CREDNERI.—A hybrid between Begonia Scharffiana and B. metallica, and a better blooming plant than metallica. The flowers are white on the upper surface with fine red filaments on the outside and are borne in large umbrella-like trusses that stand well above the foliage.

BROWALLIA LINNEANA.—An annual from the Andes. After the fashion of B. elata, but of dwarf, compact habit, and quite floriferous, flowers pale blue with white eye.

CALENDULA, QUEEN OF TRIANON.—A pot marigold with canary yellow flowers and dark maroon center.

CALAMPELIS SCABER ROSEA.—The typical plant is a little bignonia vine from Chili with orange red flowers in drooping racemes. The blossoms of this variety are of a rosy salmon color.

CAMPANULA CALYCANTHEMA, STRIPED.—A cup and saucer bell flower of a pale blue color streaked and speckled with dark purple. Good as a novelty. But for beauty don't forget the white, rose and mauve selfs, and don't sow them before next June. Winter them in a cold frame.

CALCEOLARIA VESUVIUS.—A selection of herbaceous calceolaria with large "intense, deep blood scarlet flowers." While speaking of calceolarias I may say: Last year I had two plants of the finest yellow herbaceous calceolaria I ever saw; I was delighted and kept them for seed. But, while my other selections ripened seed freely, these yellows didn't ripen a pod.

CANNA, CROZY'S STRAIN.—We are no doubt on the verge of a deluge of these cannas, for they ripen seed abundantly and seedlings bloom the first year. Madame Crozy and Star of '91 are regarded as the finest varieties yet upon the market; now both of these varieties are capital seeders and their progeny in fullness and beauty take after their parents. I have sown a number of seeds of both of my own saving, and another florist on Long Island has sown a good many hundreds of his saving, and all the rest the country to hear from. Three years from now there will be no scarcity of fine cannas in the way of crimsons and scarlets anyway. But from this on don't let us have anything poorer than Madame Crozy, we can afford to be so select.

CARNATION MARGUERITE.—This is still being pushed with energy. One of the leading distinctions between the Marguerite and other summer carnations is its compact habit; instead of heeling over and flattening on the ground as many of them do, it has an upright tendency like our winter bloomers. But florists have still further succeeded in dwarfing it. These are pretty forms but need selection to make them even. The florists have also separated the colors. Pure white is offered as a novelty. These carnations grow very readily from seed, bloom freely

the first year and ripen lots of seed. As a flowering plant I fear they will not avail our florists very much, but for seeds or for amateurs' use they are quite desirable. They are no hardier with me than Portia, and while plants that I lifted and potted in fall have bloomed freely in the greenhouse in winter, their flowers could not compare with those of our perpetuals. Raised from seed in fall, wintered in a cold frame and planted out in spring they are said to bloom abundantly all summer.

CYCLOPS PINKS is the name now given to a race of new continuous blooming hardy garden pinks that were sent out three years ago under the name of Dianthus plumarius semperflorens. They are a cross obtained by Alegatiere of France between the hardy garden pink and the perpetual carnation. The flowers of our plants ranged in color from purple to rose and pink with a crimson eye, and had quite a carnation style of blooming, but all were single. The plants were healthy, however, bloomed all summer and under a pine tree branch have survived our winters. Now I find double flowered varieties of white and other colors advertised. I am favorably impressed with the behavior of these pinks.

GUILLAND PINKS.—Said to be a new race of perpetual pinks bearing fine double flowers of various colors including yellow, to bloom the first year from seed and be better than the Marguerite carnations. I have not yet seen them in bloom. But we have young plants growing for trial this year.

CHRYSANTHEMUMS, double flowering forms of the annual carinatum. They come to us from Europe as loudly extolled as they were a year ago. But this annual in my opinion is not good enough for us. It grows well, flowers well and the blossoms are double, but there is a marigold weediness about it that our folks don't like. I had a fine lot of it last year, but it wasn't asked for once, a fair indication of how much it was appreciated.

CLEMATIS DAVIDIANA is offered in seed. Nothing new about it as a plant, however. It is usually propagated by division of the root. A few years ago V. H. Hallock & Son raised an immense lot of it from seed, but as my old plants had never ripened seed I was skeptical about theirs and, in fact, wasn't convinced till I saw them bloom. But they were true to name. So you see the seeds will grow.

CLEMATIS PANICULATA, the autumn-blooming Japanese vine, is again offered in seed. It is worth having. But clematis seeds are usually slow to germinate, taking several months or a year to come up. I raised my plants of C. paniculata from seed some years ago.

CANDYTUFT.—There are a few new names and maybe new varieties. My candytuft trials were not satisfactory last year on account of flea beetles that ate them up, and a leaf disease not unlike mignonette disease that "melted" the foliage. But I'm at it again.

VICTORIA CORNFLOWER or Centaurea cyanus var. nana compacta is being pushed again. Sow it early and try it as a pot plant. In its way it is a pretty little plant, although not striking. We are promised a better strain of double cornflowers than we had before, and surely we need it.

COCKSCOMBS.—In the line of "comb" varieties the Glasgow strain is, I believe, as good as any. The only new thing I note is in the way of a brilliant crimson flowered plumose form with bronzy purple foliage and extra vigorous habit. If I mistake not this variety is catalogued under two names, to wit, "Celosia pyramidalis Thompsoni" and "New Plumed Cockscomb Triomphe d'Exposition." Anyway the seeds of both are good, mine came up very freely. It is well to sow these plumose cockscombs just now for summer use, but sow again in May if you want to have some splendid flowers from August till October.

DWARF TOM THUMB DAHLIAS are offered in seeds and plants. Now here is a striking novelty and the only reason why they aren't offered more generally is because there wasn't enough stock to go round. They are a new race of Lilliputian build, 12 to 15 inches high, broad, bushy and free blooming. They were raised by Mr. T. W. Girdlestone, the secretary of the National Dahlia Society of England, and grown and sent out by Messrs. J. Cheal & Sons, of Crawley, England. There is quite a variety of color among them in blush, scarlet and crimson shades. From seeds we can not reasonably expect such evenness in dwarfness as we have from plants propagated from cuttings, and we can not look for many good doubles. But as all our ordinary dahlias do, if sown early, they bloom the first year from seed.

STRIPED FLOWERED and banded single dahlias are also offered. Both are of a dwarfish strain. Of the first the groundwork of the flowers is white or yellow and the stripes and splashes of other colors. The other called hybrida marginata has white flowers margined with yellow, rose, purple, scarlet or maroon. Both bloom from seed the first year.

EUCALYPTUS CITRIODORA.—This is not a new plant nor new in seed lists, but I do not remember to have seen it offered in this country before. It is an Australian tree of moderately fast growth, easily raised from seed and one of the most delightful plants we can grow. Its evergreen oblong lanceolate leaves are scented exactly like the lemon verbena (Aloysia) and quite as powerful. It is not hardy, but is a fine greenhouse plant. Its assured place with us, however, is planted out in summer with other mixed or fine leaved plants for foliage effect. This is what we grow E. globulus for, and we raise a young lot every year from seed for this purpose. I got citriodora last year; it does not grow as rankly as globulus.

EMMENANTHE PENDULIFLORA, or as our seedsmen call it, California Golden Bells, is a pretty little annual 9 to 12 inches high, with loose panicled racemes of nodding cream yellow flowers and pinnatifid leaves. Grows wild in open ground about San Diego.

GAILLARDIA LORENZIANA PERFECTION.—A full globular-headed form of the "double" G. picta. I have had them just as good as Lorenz's picture shows it to be. Capital annuals, long lasting and fine for cutting, and like French marigolds or globe amaranths they do very well in hot sunny places and sandy land, but, like them too, proportionately better in good ground.

Fern Notes.

Seedling ferns for this season's crop should now be coming up nicely in order to admit of potting off in early summer, and the spells of dull weather that may be experienced at this season make it a somewhat critical period for the seedlings, for if they are not carefully aired and watered at such times fungus will appear and whole pans of seedlings will soon be destroyed. It is at such times that the wisdom of using pans or pots of moderate size becomes apparent, for when the seedlings begin to damp off it is very difficult to stop the disease before the entire contents of the pan are destroyed.

One of the easiest methods of keeping the seed pans moist is arranged by leaving a space of about one inch between the rows of pans, so that water may be poured between them, thus keeping them moist without any necessity for watering overhead. This is a much easier plan than that of dipping the pans, and the space lost in the operation is not a great amount, beside being compensated for in the saving of labor.

It seems hardly necessary to say that seedling ferns should be protected from strong sunlight, such exposure being in no way beneficial to them, and the same rule will apply with equal force at the time the seedlings are freshly potted, for until they begin to root afresh in the new soil they are easily injured by too much sunshine.

It is also well to remember that the potting of the stock plants or exhibition specimens as the case may be, should not be too long deferred, for many species start into new growth quite early in the season, and late potting may do more harm than good.

The most popular ferns for florists' use are undoubtedly those of dwarf growth and compact habit, and there is consequently but little demand for species that produce long, straggling fronds. Among the latter may be mentioned such as Pteris tremula, P. quadriaurita, and in some cities also P. argyræa, all of these having in former years taken a more or less prominent place among trade ferns.

Some of the smaller growing pteris, for instance those of the serrulata type and also the cretica section, continue in favor on account of their comparative hardiness, free growth and easy reproduction. Onychium Japonicum, Davallia tenuifolia stricta, Adiantum pubescens, and of course the long favored A. cuneatum continue to be included in the regular stock, though the latter has fallen away in public esteem to a greater or less extent in some localities, probably from the fact having been discovered by some of the buyers of ferns that there are some other species that last longer in the dry atmosphere of a dwelling.

It seems quite possible that a certain amount of business could be developed in some of the larger flower markets of the country by growing a little more assortment of ferns for cutting, this branch having been confined in most instances to one species only, namely, Adiantum cuneatum.

There are also a very few growers handling A. Farleyense for this purpose, but outside of these two species there are comparatively few ferns grown for cutting, while the fact remains that nice bunches of assorted fronds form a useful addition to the stock of green stuff in a retail store.

Several other adiantums may be included among those available for this purpose, A. Wiegandii being a very good keeper when cut, as are also A. tenerum, A. formosum, A. hispidulum and A. trapeziforme.

Some of the pteris produce valuable fronds for cutting also, in fact P. cretica is about the most lasting frond I know of, while the smaller davallias, such as D. decora, D. affine, D. dissecta and D. tenui-

HOUSE OF CYPRIPEDIUM INSIGNE AT MR. W. S. KIMBALL'S, ROCHESTER, N. Y.

folia stricta may also be considered among the useful ones.

Of the less common species the gleichenias are excellent in cut flower arrangements, their fronds being quite hard, of elegant habit and lasting well, but of course their comparative rarity precludes their use to any great extent at present.

But whatever species may be grown for this purpose should be grown as hard as possible, by means of plenty of air and light, for soft sappy fronds will not stand after cutting, no matter what their species may be. W. H. TAPLIN.

House of Cypripedium Insigne.

The accompanying engraving is from a house of Cypripedium insigne at Mr. W. S. Kimball's, Rochester, N. Y. The center bench shown is 8 by 50 feet and the plants stand as they were grown through the summer.

Regarding these plants Mr. George Savage, who is in charge of Mr. Kimball's establishment, writes:

"Until last May they were large specimen plants, but about that time we divided them up into small pieces about as large as would conveniently go into a 6 or 7-inch pot, so I expect them to flower more profusely next winter, being more thoroughly established then than last winter, being divided rather too late in the season. We find they flower much freer in small pots than in large ones. There are about 500 plants and they produced about 2,500 flowers. They made a grand sight which everyone that saw them could not help admire.

"They are potted in good peat with ample drainage, surfaced with live sphagnum moss, slightly shaded through the summer months and abundantly watered all the year through, more especially through the hot season of the year. A temperature of 55° suits them at night in the winter months, with lots of air on night and day all through the summer and autumn until the outside temperature falls to about 45°, then they are best kept closed up, that is, if one wishes to keep their plants healthy and growing vigorously right along.

"C. insigne has become very popular lately, and being as easy to grow as a lettuce, will be grown by most florists."

Growing Bedding Plants in Large Quantities.

BY FRED KANST.

[*Read before the Chicago Florist Club Feb. 25.*]

I give a brief description of the methods employed for growing the plants used in the annual decoration of the South Parks.

Geranium cuttings are taken September 1, potted into 2-inch pots and put in the greenhouse, and without any particular care they will make roots. Then they are grown on until nice little plants, or up to about January 1. The houses are then kept cool—a little above freezing point is sufficient. The object is now to keep them from growing till as late in the spring as possible, so that they will take up but little space, which is the main point. The reason they are handled in this way is that in a growing state they would require double the amount of room that they would in a dormant condition. In fact if not growing they can be stored away in a cool place under the bench and taken out when wanted and made good bedding plants in two or three weeks' time.

Alternanthera cuttings are made in August, three plants in a 2-inch pot, and are put in the greenhouse when the cool weather sets in. They are then placed on the bench in pots or planted out. The latter way we have adopted because they can be planted in stripes or blocks of different colors so they make a pleasing effect all winter as well as serving for stock plants. In a house 12 feet wide and 100 feet long we put between 9,000 and 10,000 pots. By dividing the old plants about April 1 we obtain 40,000,

ready by May 15, and so that they fill a 2-inch pot, which is about the size and time we will want them.

We grow 50,000 echeverias. They are taken up in the fall and all roots cut off, then re-rooted in benches or boxes with light soil and sand on top, kept dry for about a week or ten days. By this time the stumps will be calloused sufficient to give them water. In this way they will make strong roots which takes about 30 days. Then they are kept cool—just above freezing is best, as they will grow fast enough in the spring so that they will be ready for planting time. If handled in this way the echeverias make little work, are the cheapest plants grown and still a valuable one for bedding.

Coleus and achyranthes cuttings are taken in the fall and rooted for stock. Only a few of each variety is necessary. The first of February cuttings are taken from these plants and about one-fifth the whole number wanted is then rooted. Then the fall stock plants are thrown out for fear that there will be a crop of mealy bugs coming into bloom and scatter their pollen among the young plants and thereby multiply their kind. You will all agree that they are good enough at any time to throw away without cross-breeding to get thoroughbreds. From the one-fifth number of plants on hand cuttings are taken about forty days before the bedding out time. We can obtain five or six cuttings from each plant, which makes the number wanted and all of the same age and size.

Such plants as lobelia, alyssum, ageratum, thyme, etc., we house enough stock plants in the fall so that we will have all the cuttings needed in two crops. From the month of February to about the 10th of March is the best time. Then the old plants are thrown out and the young ones take their places. We root all cuttings slow—that is by keeping them as cool as they can possibly stand it. Cuttings rooted fast in a high temperature will require a warm house to grow in and will grow too fast for bedding purposes, as well as taking up too much room. If their growth be checked afterward by keeping them cool it will stunt them so that when wanted they will not generally grow well. On the other hand with plants grown cool and dry all that is required to make them grow is to give them water and heat.

The above way has been very successful with us and should any gardener have been unsucessful with other methods I would advise him to try this one, and feel sure that he would have success.

In the discussion that followed the reading of the essay Mr. John Thorpe emphasized the value of the point made regarding the throwing out of the old coleus in order to guard against the growth and spread of mealy bug.

The Poinsettia.

BY H. A. STOLLERY.

[Read before the New Jersey Social Florist Club Feb. 11.]

MR. CHAIRMAN AND GENTLEMEN: It gives me much pleasure to be here this evening and read this paper at your request. I was rather reluctant to undertake the task at first, but finally concluded that I might be able to learn something myself, so in a short time I will give you my experience on the subject that I take—"The Poinsettia." I think you will all agree to its being one of the most beautiful decorative plants under cultivation, coming as it does through the winter months and forming such a brilliant scarlet head in contrast with the green leaves underneath. I have not seen it grown very extensively in this country, for reasons I do not know, but probably some one present will be able to inform me.

Although it may seem a strange place to begin, I have thought it best to start on the old plants, as a great deal of the success depends on the cuttings. These, when the bracts are off, can be cut down to two or three joints and put underneath the stage, in a temperature of about 50° and very little water afforded them. At the end of April or May more water must be given them and brought out to the light to encourage strong shoots. When three to four inches long take off and put singly into small pots filled with sand, plunging them into bottom heat. If air can be excluded during the day by placing glass over the top they will root quicker. The preference for pots is, they can be handled better with less injury to the roots.

The principal points to study in getting them to perfection are, first, let there be root room; second, keep them near the glass, and dwarf plants will be the result (the art in growing them) with leaves to the pot. A low, small house is most suitable where the plants can stand on ashes, occasionally throwing water down, and have a moist atmosphere. The sun being very hot in summer, they need to be shaded well. I have seen them grown outside in this country but with no success, as they lose their leaves all the time. The soil I prefer is two parts good turfy loam and one part coarse sand. Along in the fall give weak cow manure, let the temperature be about 65°, and around Christmas we shall be rewarded for our trouble. I remember once seeing a house staged one row above the other with plants from one to two and a half feet high, and the bracts were from 12 to 22 inches across. A very effective arrangement, I think, is a group of poinsettias intermixed with ferns and calanthes.

As my paper, Mr. Chairman, is very short upon the above subject, I think it will not be out of place to say a little about calanthes; so, with your attention, gentlemen, I will endeavor to give my experience regarding these.

The calanthes are, no doubt, a very useful orchid, coming in with their long spikes when most flowers are scarce, and lasting in bloom such a long time considering the delicateness of the flower. The varieties I think best are Veitchii, vestita oculata gigantea, rubro-oculata, igneo oculata, Regnierii and Turnerii. The three former are, no doubt, the best for market—gigantea having especially fine arched spikes, with the advantage over most of them, as the leaves keep green during the flowering season.

The bulbs will commence rooting the beginning of March. Pot up before getting out far, as they break very easily. I prefer potting into small pots, then pot on when rooted enough. The general plan is to put three bulbs in the pot they are to bloom in, and I have taken especial notice of this, the roots will run around all over the top and do not like to go down, and the result is that when they do go down, the soil has become sour. By potting into small ones and repotting the roots can be buried into fresh soil. I like to fill the pots nearly one-third full of crocks; the soil I think best is two parts turfy loam, one of peat and moss and one of sand. One good watering when potting up, and after that a light syringing every day is all that is necessary for some time. A temperature of 65° to 70° will suit them, and when in full growth weak manure water two or three times a week will not hurt them.

As the bulbs mature withold water gradually (with the exception of oculata gigantea). A very good plan to make the pot look respectable when the leaves are gone is to plant a piece or two of Selagenella denticulata into each pot about six weeks before blooming, and by that time the pot will be covered. After flowering shake them out of pot and put the new bulbs in boxes into a moist place. I prefer this as they keep very plump, which helps them to throw out much stronger growths. The old bulbs do not amount to much so it is just as well to throw them away.

I would like to add that when poinsettias are required for cutting purposes, by cutting them a day before being used will give them time to bleed.

I do not suppose these methods will meet the approval of all present, but I hope a discussion will follow and that it will prove beneficial to most of us, as we all live to learn.

The Color Question.

The article signed "L. S." on page 150 contains some pertinent and useful suggestions, and some inconsistencies which I wish to point out for the good of the cause and not in a hypercritical spirit. At the same time criticism is of the greatest benefit in keeping us in the right path and should not be received with indignation.

The suggestion of L. S. that scarlet be taken as pure red, or basic red, is at once an error, for scarlet is a yellowish red, closely allied to orange, but nearer to red, which is a color by itself. Scarlet mingled with blue will give the shade of crimson (so-called) seen in the chrysanthemum Cullingfordii, which is a good way from true crimson and much nearer to the maroons and purple-browns. It is quite impossible to produce crimson, carmine or magenta, so long as the least particle of yellow enters the mixture, and the yellow of scarlet will effectually prevent the success of the experiment suggested by L. S.

Again he says "blue is no longer a blue when red is with it," and "when you say tropæolum yellow who is going to know what shade you mean." If there is only one *blue* color there must also be only one *yellow* color. There cannot be shades of yellow and not shades of blue. I contend that there are many shades of both, but "tropæolum yellow" is a distinct and unmixed color and the creamy yellows, lemon, salmon and saffron tints are only modifications by mixture of the one glorious yellow of the tropæolums. The name may not be a happy one. It was merely a suggestion.

If L. S. will pluck a pure yellow nasturtium flower and carry it about his garden and compare it with the marigolds he will find that it has a color *sui generis*.

I heartily agree with him that the dry goods should be let alone until we have studied nature's colors. The burning question is—how shall we do this?

My own apparatus is made of a series of discs colored with the various pigments used by artists. These are slit from center to circumference so that two or more can be placed together to show any desired comparative surface. The discs are then placed upon a spindle and revolved with such rapidity that the colored rays of light reflected from each are intermingled into one homogeneous hue before hey reach the eye. This machine enables

VIEW IN LINCOLN PARK, CHICAGO.

one to mingle color and not paint and there will be many revelations to a novice that will be surprising. One striking example is the mingling of yellow and blue, which in pigments would result in a brilliant grass green, and on the discs prove to blend into pure white or light gray, according to the proportion exposed of each, not even a suggestion of green in the color of the revolving discs.

L. S. speaks of the "primary" colors. Which are these? The science of years ago said "red, yellow and blue." But to-day these are disputed by our eminent color students. By no mingling of colors can you make green, therefore it seems probable that green is a primary color. Yellow and green colors mingled in proper proportions give white, and if green is a primary color yellow must represent a mingling of the other primary colors, and which are they and how many?

The fact is that we know less about color than about electricity, which is as yet in its infancy.

Mr. Alexander H. Wyant, the famous landscape painter and the subtlest colorist probably in this country, while walking through my greenhouses a short time ago gave me as his opinion that the school of color was to be found among the flowers. If this be true, why not the names also? RICHARD FERRIS.

The question of color which is now before the readers of the AMERICAN FLORIST is mainly one of nomenclature. The character of a color once established needs only the addition of a name, and then the knowledge of the color is complete. But a confusion of names is a confusion of ideas and impressions conveyed, and we should be very careful that we do not say color when we mean paint.

It seems to me, therefore, that when we talk about color we should make a very sharp distinction between it and pigment. The artist's "colors" are all pigments, and the coloring matter in the petal of a flower is also pigment. The spectrum or prismatic color is color *in genesis*. Therefore, if we choose to term artists' pigments colors (which it is perfectly right for us to do, provided we distinguish between them and prismatic colors) we must not confuse the paint box with the spectrum. This is just what I fear Mr. Ferris has done, as well as "L. S.," to whose suggestions he takes some exceptions. There is only one way to understand color *as we see it*, and that is through familiarity with pigment, whether it be in the paint box or the flower petal. The prismatic colors are a revelation of jewel-like brilliancy; they are like fire; we learn from them the quality and appearance of pure red, yellow, green and blue—and little else. Any one who possesses a prism may learn this much, and then he can continue his studies afterward with flower or paint box to greater advantage.

The search for the pure yellow, red and blue colored flower becomes interesting as the sensitiveness to color shows itself in varying proportions in different individuals. But what is one to do when his sensitiveness is thrown quite "off the track" by wrong terms applied to pigments, and by confusing experiments with the pigments themselves? There is no scarlet and blue in my paint box, which mixed will give the color of the Cullingfordii chrysanthemum. Yet I know that if these colors of the prism could be drawn together the carbuncle tones of the Cullingfordii would be there.

Blue is of course blue without red or yellow in it, but what shall we decide upon as a standard? The pure prismatic blue is hard to put your finger on. It is there, though, however difficult it is to define. In nature and in the paint box there are blues innumerable, some of which are reddish and others greenish—still they are *blues* without shadow of doubt.

Yellow, whether it is that of the tropæolum or the nasturtium, is a color found pure enough in nature or the paint box. It only requires the discriminating eye to find it free from red or green.

To study nature's colors means that in the end we may be able to detect the zero point (for it is a very fine one) where yellow exists untainted with either red on the one side or green on the other. I should think that such delicate discrimination could only be attained through practical experience, and practical experience means a long course of comparative

examination. It is only through comparison that we know what is best in all things. I do not think that Mr. Ferris' apparatus is a good medium for the attainment of knowledge about color. I think that primroses, nasturtiums, marigolds, sunflowers and eschscholtzias will teach us more about yellows; roses and poppies more about reds; and violets, gentians and forget-me-nots more about blues; and further, the worst of it all is Mr. Ferris gets pigments and colors confused, because he says "this machine enables one to mingle colors and not paint." He is quite mistaken, because, if he will allow me to make the suggestion, a disk of well distributed prismatically arranged pigments whirled around by his machine will not show the same result as a complete blending of the prismatic colors. In one case we do *not* see a disk of white and in the other case we *do* see white light.

If this machine mingles *color* and not paint then the results of experiments with it should be parallel with those made with the prism. I therefore maintain that the machine mingles pigment, particularly as it is *pigment* which is on the disk. That the mixing of these same pigments on the palette produces a different result is a matter which may be referred principally to the constituents of the pigments themselves.

I must also disagree with Mr. Ferris' statement about the "brilliant grass green." The two colors I would use to produce such a green (antwerp blue and gamboge) whirled around on the machine produce a beautiful *very green sage green*. That Mr. Ferris' experiment differs from mine is, I believe, entirely due to the fact that his pigments were not so pure in tone as mine. That I need in my studio the purest powder (unmixed) colors, besides the standard water colors in pans or tubes, is proof of the fact that colors differ greatly in purity. That an artist uses the most subtle discrimination in the selection of his colors (pigments) to produce certain color tones is another fact which may account for the difference between Mr. Ferris's experiment and my own; not that I would insinuate that the artist *alone* can be discriminating, but I point to the fact of his experience and quickened perceptions which enable him to arrive quickly at accurate conclusions. In a word, I can produce by the machine's assistance all the grays Mr. Ferris speaks of, a number of greens sufficiently well pronounced in tone, and I *cannot* produce pure white! In the face of all these facts I must reiterate the statement that the best study of color is aside from the consideration of the prism and I will add that the *machine* is confusing in the study of color by pigments.

To establish by name a red, yellow or blue, with the assistance of pigment in the flower petal or artist's paint box is not a difficult matter, but to get wound up in the intricate meshes of the scientist's analysis of "basic color" is to get caught in a web of theories which will not assist us in the decision that the tropæolum's color is a pure yellow. But if we have beside us a patch of artist's yellow which has been exactly matched with the prismatic yellow (i. e., the zero point between the red and green) then we may put the particular tropæolum flower in question to the test. We may try the buttercup, the forsythia, the nasturtium, the marigold and the eschscholtzia by as perfect a material standard yellow as we may hope for.

In conclusion we may be sure that color *in genesis* is subject to the same principles and conditions as color in pigments, and that the great distinguishing difference is the absolute purity of the former and the compromising, chemical impurities of the latter. What then does it signify whether green is a primary color or not, or that the emerald green in my paint box is a *unique* green?

F. SCHUYLER MATHEWS.

The Season.

Almost all through the eastern section of the country there is a general complaint that roses are not producing as good as usual, and the causes advanced are very varied, some of which may be right, and, in a certain measure, many of the theories mentioned may have something to do with it. On the other hand we may be all wrong in our views of the causes. One says the extreme warm weather in September and October is largely the cause of the trouble; another, want of sunshine during November and December, while another says it is because we have had scarcely any snow. With many other theories of ε like nature on hand it seems very difficult to arrive at any safe conclusion, and the more I think the matter over the more I am inclined to think that we may be all groping in the dark, or in other words, have not found the true cause, for this reason: we have had hot Septembers and Octobers before, cloudy Novembers and snowless winters, in short have had to contend with all the advanced causes before and came out somewhat better than the present season. This induces me to think that we have to search further yet for the true cause of this very general complaint, notwithstanding that one grower is positive that over-watering has been the root of the evil in his particular case. But let me be clearly understood that I do not wish to infer that each and all the causes suggested may not have some influence in the matter, in fact, I have good reason to think that they very largely affect the whole crop, yet, as I said above, I think we may have not yet struck the real cause, and until we do we must go on investigating this subject in every way possible.

In several cases that have come under my own observation I am convinced that "Club Root" has a great deal to do with our present trouble. Now the question in this case is to decide what causes "Club Root" and what can be done to remedy it. As, probably, some of your readers may not be familiar with "Club Root," particularly in roses, I will describe it as nearly as I can, and would advise all growers who have sickly plants, or plants with yellow foliage, to examine carefully the roots and see if they can find any small nodules or wart-like swellings on them, varying in shape but mostly oval, and usually about an eighth of an inch long but sometimes much more elongated. Where these are at all abundant the young roots will generally have an unhealthy appearance and will turn a dark brown color, the outer part gradually decaying, and when rubbed between the thumb and finger will easily crumble up, leaving only the main tissues of the center. Under such conditions is it any wonder the plants will not produce as many buds or as good as usual?

The cause and cure for the above I will leave for the next issue as I have already taken up too much space of this one.

J. N. MAY.

Tarrytown, N. Y.

If you should ever undertake a trip to see the F. R. Pierson Co.'s rose houses at Scarboro in moist weather get off the train at Tarrytown and invest your all, if need be, in a team to carry you over the intervening five miles. You don't know what mud is until you have attempted the walk from Scarboro station and looked down upon the small sized farm which you have laboriously carried along with you on the sole of each boot.

But it is grand rose soil and that is one consolation. After shovelling the mud from your boots and reducing your feet to normal size and weight step inside the houses and under the guidance of courteous Paul M. Pierson take a trip around and you will see abundant evidence of the fact that this mud is great stuff for the roses.

Not every rose seems to thrive, however, for Paul will tell you that La France is almost useless with him and will show you the proof in the few plants of this variety which are ekeing out a poor existence, also that Mermets have also proved very refractory. In further proof that soil is not the only requisite in rose growing (which same has already been ascertained by the ambitious growers who bought Nyack soil by the car load), he will also tell you that only two months ago these luxuriant beds of Woottons, Cusins and Meteors were so badly afflicted with the dreaded yellows that he seriously thought of closing up the houses for the season, and to show again the contrariness of rose growing and the unreliability of all prescriptions he will also tell you that he acted just exactly contrary to the doctor's orders and deluged those plants with water. Whether on account of the water remedy or in spite of it, yet it is true that at the present time no handsomer buds are going into the New York market than the roses cut from those very plants, and almost all traces of the yellows are obliterated.

American Beauty has been doing grandly; 3,000 blooms of this variety was the cut in one week recently. Blind wood is conspicuous by its absence, every shoot large or small bearing a flower.

The Wootton rose as grown here jumps at once into the first rank as a market rose. Great strong stems 18 inches or more in length, splendid foliage, blooms of bright color, high fragrance and almost as large as first quality American Beauties.

Cusins and Meteors are also in first class condition and are producing enormous crops. Mr. Pierson believes in a high temperature for the Meteor and says there is nothing so fatal to good buds on this variety as a draught of cold air. When it gets what it wants as it appears to do here, it is a tremendous grower.

These rose houses have been so often described and so much has been written about the method of heating them that a description is at present unnecessary. The propagating house appears to be remarkably successful, American Beauties rooting readily with the most trifling percentage of loss.

At the old establishment at Tarrytown which is under the more immediate supervision of Mr. F. R. Pierson, there is a

large stock of kentias, arecas and pandanuses, big and little, besides quantities of Harrisii lilies with Easter peeping out of their crowns, and enough Star and Crozy cannas to insure a small fortune to the owner at prospective prices. Mr. Pierson has just received the beautiful colored plates of Mme. Crozy Canna which are to be issued with his spring catalogue.

New York.

The florists report a good trade for the past week, although the warm spell in the first few days had a tendency to overstock the market with some varieties of flowers. The worst glut at present is on bulb stuff. Harrisii lilies are in particularly bad shape and many lots are sold as low as $4 and $5 per 100, and the sellers consider themselves fortunate to get even that. Lily of the valley is also overstocked and is being piled in by thousands. Price varies according to quality, and it must be extra fine to bring over $2 per 100, while much of it is sold as low as $1.50. Tulips are too abundant. The pink varieties sell rapidly at good figures, but scarlet is difficult to dispose of. Callas are sold for anything they will bring. Mignonette is also in the dumps on account of over-production.

Roses still hold their own in good shape. Cusin maintains its lead among the small roses bringing $10 per 100 on an average, and some extra fine specimens selling as high as $15. American Beauties, Magnas and Laings of best quality bring from $6 to $9 per dozen still, but Jacqs are too plenty and demand slow at $15 to $20 according to quality. Young Bros. are receiving some very handsome Laings grown by Christy, of Stamford, Conn. The handsomest Brides in the market are coming in from the original home of the Bride, John N. May's, at Summit.

Finer Brunners and Magnas were never seen than are being received from Julius Roehrs at present. The American Beauty will have a hard tussle to hold its own with such competitors as these are. La France as a rule is in bad form just now. A "detriment to the trade" one of the dealers says of this rose. He is not far from right, for like the little girl in the nursery rhyme, "when it is bad it is horrid."

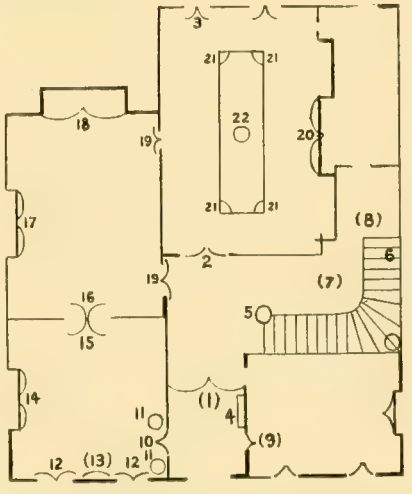
Fortunate is the man who has a nice stock of smilax or adiantums at present. Smilax has taken a sudden upward turn and everybody wants it. Prices run from 20 to 35 cents a string according to quality. Good adiantums sell at sight for $2 per 100.

Carnations still go lively, the Grace Wilder just now being in special demand and somewhat scarce. Lilacs are badly overdone, violets fast approaching the same condition.

Butler did a fine decoration for the Columbia College Freshmen at Morello's. The entire work was done with daffodils, tulips and other spring flowers, and is said to have been one of the best arranged decorations of the season.

Alex McConnell is making preparations for a big Jewish wedding which is to take place on March 2. The ceremony will be performed under a peculiarly constructed canopy, the form of which will be strictly in keeping with the old Jewish laws. The canopy will be composed of smilax, roses and carnations. Over the folding doors will be two hearts composed of pink roses, joined by a bowknot of white carnations.

A fine piece of work was done by J. Condon at the Oxford Club House at Brooklyn on February 25. Large quantities of roses were used in the decorations, which were very lavish.



The store of the Klunder Co. on 5th avenue has been attached by Jas. Hart for an account of $940. It is claimed by friends of the company that the trouble is only temporary and Mr. Hart's action unnecessary. It has been generally understood that there was abundant capital behind the concern.

Herman Kuhn, of 896 Sixth avenue, is making merry over the addition of a boy to his family.

J. J. Heinrich, of 121 Court St., Brooklyn, has disposed of his business to A. C. Schaeffer & Co.

Washington.

Among the many decorations of private houses on the occasion of receptions and teas during the present gay season, that of the Misses Davis of Philadelphia, who temporarily occupy the spacious Lawton mansion, eclipsed anything of the kind heretofore attempted in this city. The decorator (Small), who was evidently given *carte blanche*, performed his task with an unstinted hand and yet avoided in the airy lightness of his designs and the delicate materials used that overloaded effect so often the result of elaborate decorations.

First of all the doors and portieres were all removed. On entering from the vestibule the first thing in the hallway to strike the eye was a large double curtain of Asparagus plumosus (1) caught up on either side by artistically arranged clusters of Harrisii fastened with bows of satin ribbon, while a superb specimen of Nephrolepis davalloides furcans firmly secured to the center, suspended in a cluster overhead, like fairy tassels, its graceful fronds.

Some distance beyond, at the entrance to the dining room (2) there was another and smaller curtain of A. plumosus, similarly treated, while far in the rear as seen through this vista appeared a third yet smaller curtain (3) imparting the effect of an interminable succession of archways beyond. Immediately to the right of this first curtained archway was an elegant pier glass (4) completely encased in smilax, its base richly banked in ferns. Passing through the archway to the rear the elaborately treated stairway came into view, the newel post (5) being completely covered with closely laid ivy so as to preserve its fine proportions and on it a beautifully formed vase made up of camellias, filled with a fine cluster of Beauties. The handrail was overlaid its entire length with camellias, while the banisters were completely hid from view by foliage plants. The ceilings here were overlaid with wired wild smilax, likewise the walls up to the landing where an orchestra was hid from view by a screen of laurel (6) dotted over with sprays of camellias. The area (7) at the front of the stairway leading to the cloak room (8) was lined with palms, pandanus and azaleas. The entrance to the library (9) on the right entering from the vestibule was likewise curtained with A. plumosus gathered up on either side over clusters of Harrisii tied with satin bows. In the library where lemon punch was served from a huge block of crystal ice upon a salver set in ferns, the two windows and mirror were liberally draped with smilax, the hearth filled with latanias and ferns and the mantel banked with maidenhair ferns and hyacinths, while palms graced each corner.

The entrance to the first reception room (10) on the the left was also curtained with A. plumosus. Here it was that the decorator seemed to be most lavish in his art. Within on either side of the entrance upon richly gilt pedestals (11) in golden wicker work stood superb specimen plants of white lilacs in full bloom, their delicate odor gratefully greeting each guest upon entering. The heavy damask curtains covering the large front windows (12) were made to serve as a base for closely laid strands of A. plumosus studded all over and fringed with sprays of valley. The large mirror between the windows (13) was partially covered by a single curtain of A. tenuissimus carried diagonally across and looped up with a satin bow over a cluster of White La France. A basket of select cattleyas, principally Warneri, was suspended from the cornice of the mirror and hung directly over a beautiful broad low golden vase full of long sprayed valley on a gilt tripod of exquisite workmanship.

The hearth was filled in with foliage plants, the mantel banked in ferns and pink carnations, while the large mirror (14) was likewise curtained with A. plumosus dotted over with sprays of valley. Vases of Wattevilles, Mermets and Duchess were placed on stands in every niche, while the tallest of Areca lutescens with their base backed in ferns occupied the corners. The communicating archway (15) was doubly curtained with A. plumosus, in the front room dotted over and fringed with sprays of La France and looped up at either end with satin bows over clusters of the same. In the rear room the corresponding curtain (16) was treated in the same manner with Brides. Here too the large mirrors (17) and mantel were made to correspond in white with the one in the front room, where the prevailing color was pink. The doorways (19) were here also curtained like those already mentioned, while the alcove (18) in the rear was converted into a veritable fairy bower of azaleas and foliage, partially hidden from view by looped curtains of A. plumosus studded over with Perles.

Entering the dining room to the right another large banked mantel and curtained mirror (20) came to view, treated the same as in the other rooms, as were also the windows. The four corners (21) of the refreshment table were treated in a novel manner, being covered with mossed wire shields decked with loose sprays of La France dangling down, yet well secured, giving these corners the appearance of a shower of roses falling down over them to the floor. The floral centerpiece (22) of the table consisted of an immense bowl shaped vase filled with the

most luxuriant overhanging adiantums, from the center of which rose a great cluster of the grandest specimens of American Beauty which it has been my privilege to see, fitly holding aloft their fragrant heads to meet the corresponding gems of the their kind that hung down in graceful garlands from the great crystal chandelier above enveloped in the daintiest of A. plumosus. Z.

At the annual meeting of the Florists' Club of Washington last Tuesday evening officers for the ensuing year were elected as follows: A. B. Garden, Pres.; W. Gude, Vice-Pres.; G. W. Oliver, Sec'y; A. Gude, Treas.; E. Cadmus, Cor. Sec'y; Auditing Committee, W. H. King, E. Cadmus, W. S. Clark.

After the business meeting the club sat down to the annual banquet, which was a most enjoyable affair.

Boston.

The cut flower trade is booming this week. The retail florists are to be found right behind their counters full of business and have no time for visiting their friends or indulging in any other recreation at present. The rush is most welcome, but if it would only last!

Roses of all kinds are scarce. There are nowhere near enough to fill the demand. The same is true of carnations. The call for carnations is unprecedented. It comes from every direction and includes all colors, although as a rule white takes the lead. And there is some fine stock coming in. The quality of the carnations this season is far ahead of any former year. Bulbous stuff is plenty. There is a pretty good sale, however, for all of it excepting the various single narcissi, which nobody seems to want at any price. Harrisi lilies are also too plenty and a good many that are brought in bear the marks of long keeping. Violets are also overstocked. They average well as to quality, but they seem to hang fire, and the street peddlers, who are unable to handle roses and carnations at present rates, find abundant solace in the condition of the violet supply and one sees violets, violets everywhere, along the curb stone, on the street corners and on the dresses of the shoppers.

The single violet which Mr. C. M. Atkinson grows he describes as very sturdy and almost proof against disease. He asserts that it throws from ten to fifteen blooms to one of Marie Louise. From twelve sashes he can pick five thousand a day. It is very fragrant and the color is a fine, deep purple.

On February 20 Jas. Comley exhibited at Horticultural Hall very handsome plants in full flower of Eriostemon myoporoides and E. salicifolius. C. J. Dawson showed Daphne cneorum and other hardy shrubs forced, and Jackson Dawson had exceedingly fine specimens of Andromeda speciosa and Exochorda grandiflora, both of which are admirably adapted for forcing and can be brought into flower in from four to six weeks' time.

Among the notable visitors to Boston during the past week were Mr. A. Ingram, representing Hugh Low & Son; Mr. A. Dimmock, representing Sander & Co.; and Mr. C. B. Weathered of New York. Mr. Dimmock among other novelties in orchids shows a new break in cypripediums, which has been named C. Chamberlainii. This cypripedium, which was collected about two months ago "somewhere in the eastern hemisphere," bears a most beautiful flower and is totally distinct from any cypripedium heretofore introduced. The lip is profusely dotted with magenta purple, petals twisted, white with rows of dark purple spots, dorsal sepal broad, yellowish white, green shaded, with several lines of dark purple markings. The most remarkable peculiarity about it is the number of flowers on a spike, which often number as many as thirty. The spike is erect and the flowers branch alternately from peculiar looking bracts on both sides of the stem. The foliage is very massive, leaves measuring 15 inches in length and 3 inches in width.

The Boston Immortelle Letter Co. has added some new machinery whereby they now strike out at one stroke of the die a whole inscription in script letters. No one would imagine that enough letters were used in the florist business to support such an establishment as this is. The work room is 80 feet long and 8 to 10 employes are kept busy all the time. The machinery is all driven by an electric motor. The process is quite interesting and novel. The letters are stamped out with hardened steel dies from heavy card board, which after being soaked in shellac to harden them are then treated to an application of glue, after which they are ready to receive their coating of the prepared immortelle powder. The letters are then put up in neat envelopes and boxed. The machinery cost in the neighborhood of $6,000. One man can strike out 4,000 script words a day and the dies used for the block letters are capable of turning out 48,000 letters per day.

Mr. L. J. Doogue, son of Mr. Wm. Doogue, city forester, has opened a florist store on Beacon street, near Charles.

The Gardeners' and Florists' Club meeting last Tuesday evening was well attended although a stormy evening. President Morton being absent, Vice-President Long presided. The committee on dinner reported they had arranged for same at United States Hotel the evening of Thursday, March 31.

Thos. H. Flinn's essay on the nursery business advocated more interest and intercourse between florists and nurserymen. That we should learn a lesson from European nurseries. Our most successful florists and growers are graduates of European nurseries and the nursery was their first school. He recommended that local florists should seek to supply local demand for small nursery stock and not leave customers to be victimized by unscrupulous tree agents with misleading pictures. He detailed the progress of the nursery business during the past 70 years. The first nurseries in New England were established in 1816 on a very small scale. And up to 1850 the nurseries were mostly near the seaboard. Since then there has been rapid progress in the Central and Western States. We have only recently begun to realize the value of decorative shrubbery about our homes. We were first disappointed because we relied on imported stuff and we find we must propagate, grow and test on our own grounds. The people are beginning to understand the value of home grown stock, and local nurseries foster local trade. There is an increasing demand for ornamental trees and shrubs for parks and large estates. Examples like Mr. Hunnewell's and the Arnold Arboretum are more valuable than all catalogues published. He emphasized the value of careful packing and truthful labelling. There have been many losses through unskillful packing. The essay was a valuable one and was well received.

In the discussion Benj. Grey said that the trade in ornamental shrubbery to local florists means increased income for balance of the year when no flower trade. It is good stock to have, for if you can't sell this year for twenty-five cents you can keep it till next year and sell for seventy-five. Mr. Dawson spoke highly of the influence exerted by the Arnold Arboretum. The example set there of home propagation has resulted in the condition that more shrubs are now home grown than are imported. He spoke of the value of the dwarf evergreens which we have in such great variety. They are useful for many decorative purposes both outdoor and indoor. He also spoke of the profit in growing shrubs for forcing. The discussion was also participated in by Messrs. Ewell, Gormley and others.

Two new members were admitted.

The bowling club then held a meeting and adopted by-laws and regulations. The club will meet March 16 and 30 at Brookline street alleys. Mr. C. V. Whitten extended free use of his private alleys at any time the club desires. A unanimous vote of thanks was voted for the generous offer.

Chicago.

At the meeting of the Florist Club last Thursday Mr. F. Kanst, superintendent of the floricultural department of the South Park system, read an essay on the growing of bedding plants in large quantities, which appears elsewhere in this issue. The essay was well received and a vote of thanks tendered the essayist.

Announcement was made of the death of Charles Reissig and it was decided to attend the funeral in a body. Arrangements were made for a suitable floral tribute and a committee was appointed to draft resolutions expressive of the sentiments of the club regarding the loss of so old and valued a member. A request was received from Mrs. Reissig that the club select six of its members to act as pall-bearers and the request was complied with.

On the table was a plant of Cyclamen persicum giganteum that attracted a good deal of attention. It was in a 6-inch pot, excellently grown and splendidly flowered. It was from Mr. Wm. Kirkham, gardener for Mrs. Rockafellow at Maywood.

The project of a spring exhibition at the Lincoln Park conservatory has been practically abandoned and all effort will now be concentrated on the great chrysanthemum show next fall.

Never in the history of this city has there been such a scramble for flowers as at present. The scarcity of stock can in a measure be accounted for in part by the extraordinary dark and cloudy weather which has prevailed for a month, although it can not be wholly laid to this cause. In fact the majority of growers trace it back to the severely trying hot spell we had last fall. Whatever the cause the fact remains that stock of all kinds, and roses in particular, never were so scarce as at present. The prices have of course kept up to the top notch. Mermets and Brides sell at 7 to 8, Perles 6 to 7, Gontiers 5 to 6.

Hybrids are at last coming in, although in too small quantity to meet the demand. Jacqs also are in the market in very small quantity and are of rather poor quality.

The supply of carnations has kept up better than any other stock, still there is not enough to go around. Violets are fairly plenty though no over stock. The

same might be said of all bulbous stuff. The supply of this class of stock is, generally speaking, fair and finds a ready market at good figures.

Among recent visitors to the city were F. B. Wenderoth and Judson Kramer.

The florists were kept pretty busy during the week the congressional excursionists were here. It was a continual round of entertainments and the floral decorations were numerous and elaborate. But the scarcity of flowers made it uphill work to meet demands.

Philadelphia.

Business has been at white heat the past week, everybody busy and flowers of all kinds in great demand. Prices stiffened up a little, but most growers were satisfied to sell out clean at the old rates. Daffodils and tulips are now to be seen at their best and are very popular, with the supply hardly equal to the demand.

The Brunner is king. All other roses are thrown into the shade. For all the swell occasions it is the Brunner or nothing, and how the boys did hunt for them the past week. Messrs. Anderson and Heacock were the particular dispensers of his majesty's favors and their bank account must now present a very satisfactory appearance.

Laings have also sold very well, but at about half the price of the Brunners. Heacock is cutting some particularly fine roses of this variety.

Mr. Lonsdale is very enthusiastic over the Buffalo convention and says the exhibit of cut flowers was the finest he has ever seen.

Habermehl of Erie avenue has a particularly fine batch of cinerarias. They are very well grown and find a ready sale.

The second assembly ball was held Friday, the 26th. There were about as many bouquets carried as at the first, possibly a few more. All the Brunners that could be obtained were made into bouquets for this event, at prices ranging from $20 to $40 each. One bouquet was arranged with choice orchids and roses, in which valley was used as smilax to fill in and back up the bunch. Another had valley sewed over the ribbon. The decorations were very elaborate, the committee having undone their purse strings. Graham put his best foot forward and as a result it was the best decoration seen for a long time. Fine palms, asparagus, Brunner roses and orchids were used liberally, as well as southern smilax and pines in the background.

Lilacs are scarce in this market. None of the growers make a specialty of them. Campbell and Kennedy have had quite a batch and George Uber has tried his hand successfully. It would certainly pay a grower who could keep up a supply of this flower the season through.

The bowling element are now in their glory. In the tournament McLean and Heron are tied for first place, Anderson is third, Longinette fourth and Kennedy has fallen to fifth place. This is the first class. In the second and third classes the leaders hold their own.

By the way, in a little match at the Hub recently, we believe the Philadelphians came out on top. Thus may it always be.

If the Philadelphia growers don't make a change soon in the matter of dirty flower pots there is going to be war. The dealers have come to the conclusion that the growers should find time and a scrubbing brush and so change the appearance of pots that it will no longer be difficult to tell whether a plant is potted or whether it has just been pulled up from a bed of soil, there being so much dirt clinging to the side that one has really to feel for the pot.

Charles Price's paper on how to grow hybrids profitably is looked forward to with a great deal of interest. He has been gathering matter from all the successful growers of these roses and this, in addition to his own experience, should give material for a very instructive essay.

St. Louis.

Fully two weeks have passed us with scarcely a sunny day. Who can wonder at the general scarcity and poor quality of roses under such circumstances? The lack of sunshine has had such an effect upon the coloring of the roses that La France and other colored roses sent in to one of the stores during the past week were thought to be new kinds by the customers.

There is no very material change in prices. Funeral and other set work is fairly plentiful.

The Florists' Club has succeeded in getting the Exposition music hall for its next annual chrysanthemum show in November.

Mr. Frank Fillmore is carrying a nice stock of young healthy pelargoniums this year.

Mr. Koenig has just returned from a trip to Chicago. Mr. Jordan is about to go west seeking two weeks of pleasure.

Mr. Robert Tesson is propagating a good stock of young roses for the trade. An inspection of his steam heating plant revealed a few good points that might well be stated here. The house is 304x18½ feet and built after the eastern style of rose houses. The boiler is a 75-horse power capable of heating two other such houses as the one just mentioned. A higher pressure is kept in the boiler than is used in the pipes and the water of condensation is pumped back to the boiler, or to the water tank as may be required, by an automatic pump. Attached to the steam gauge is a metal point that the indicator strikes when the steam pressure falls to such a point as to be unable to work the pump. This sounds an alarm in the fireman's room and thus reduces the danger of freezing out and lightens the work of firing considerably. The side walls of the boiler instead of being brick as is generally the case are hollow steel cases 14x4 feet and 6 inches thick. These are connected with the main boiler in front and on top by 3-inch pipes, thus increasing the efficiency of the boiler very materially.

While at Young's greenhouses your correspondent saw one of their steam fumigators in use. This is very evidently a good and safe way of fumigating and bids fair to supersede the old method wherever its use is practicable. They had just filled a novel wedding order in which 120 sprays of lilac were used.

In your last issue is an article by Mr. Wm. Falconer headed "Naming Plants." In it he discussed the difficulties encountered by gardeners and florists in naming many kinds of cultivated plants and suggested a way out of the trouble. In talking with Prof. Wm. Trelease, Director of the Missouri Botanical Garden, about this matter, your correspondent learned that the Garden stood ready to do all it could so far as its facilities would allow, to render assistance in this matter by naming either dried specimens or growing plants sent in proper condition for identification. J. W. D.

Baltimore.

Washington's birthday was a beautiful day, ideal in fact. It was marked by a reduction in railroad fares between us and our next neighbor to the very low rate of $1 for the round trip, and, though Washington is a nice little place, the inhabitants show their good taste by taking advantage of such times to visit us, and when here by buying flowers to wear. So that in connection with the usual brisk trade of a holiday the addition to the strollers about town made things decidedly lively in the flower way.

The rest of the week was nearly as good, though the weather Thursday and Friday was dull and sloppy. Prices held about the same as last week, with a very considerable falling off in the quality of stuff offered, except violets, which are fine. Smilax very scarce, and the supply of Perles and La France short.

The Club met Monday evening with a public ball in full swing above, and frequent accompaniment of brass band from the side, so that at times things literally rattled in the hall.

The report of the committee on the annual banquet called out a surprising diversity of opinions from the members; one gentleman expressing himself to the effect that any such embellishment of life was "a piece of foolishness," and the money would be better spent in helping some poor fellow florist along, or, best of all, in starting a fund to build a hall. It was a good natured discussion though, and after the man who wanted plenty of wine, and the man who wanted none, the extravagant man, and the economical man and numerous others had all had their say there was a general laugh; then the club decided to invite the two gentlemen of longest standing in the business here, Messrs. W. D. Brackenridge and Jas. Pentland, to be their guests on the occasion and the whole matter was dropped.

A meeting of all members interested was called by Mr. Ed Kress for March 2nd to organize a bowling team, and enable Baltimore to take the place she deserves in the front ranks of florist bowlers. Hurrah! Set 'em up again!

There was no essay and the question box not bringing up any matter to provoke discussion, the club adjourned at a comparatively early hour. MACK.

Toronto.

Other clubs (notably that of Hamilton) are beginning to move in the matter of botanic gardens for Ontario, and it is to be hoped that before next fall things may be in such a shape that pressure sufficiently strong can be brought to bear on the Provincial Government to make it give the subject at least its "serious consideration." But the clubs have got a good summer's work before them in order to make a success of it. Governments always seem to have especially foggy and incomplete ideas on horticultural matters, so that any deputation appointed to interview them should be well posted on all possible points so that objections may be promptly squelched, questions effectively answered and doubts settled.

"Chrysms" is certainly the best contraction yet and Mr. R. Ferris, the inventor, is I think entitled to "go up head." Chrysanthemums is exhausting, "mums" is brutal, "chrysanths" is too long to be short enough, but "chrysms" is elegant and just right, let it be put in the glossary and perpetuated.

The prize list for the coming July flower show held by the Toronto Electoral District Society has been looked over and

improved by a committee of the Gardeners' and Florists' Association. Thanks to this committee this July show has improved 50 per cent in the last three years and many injustices have been remedied. Some really very fine specimens of stove and greenhouse plants, palms, etc. are exhibited at this show and it might be worth Mr. Thorpe's while to give us a look about that time. Between $700 and $800 is all the prizes amount to, but the amount gets bigger every year. E.

Montreal.

Business still good. Roses and carnations scarce. Tulips, narcissus and other bulbous stuff plentiful and does not sell as freely as last year. Tulips in particular "go" very slow. Probably the political situation here has something to do with it.

At Premier Abbott's place for the last three weeks there has been a splendid show of cattleyas, chiefly Trianæ and Trianæ alba, one of the latter being remarkably fine, so Wm. Wilshire, the man in charge, says and he ought to know.

Campbell is afraid he has got the violet disease. Mac has got a sore throat (this is an annual with him). Murray has some good hyacinths this year. Kirkwood is all right again. Stanford got "Kitty." W. Mott, of H. A. Dreer, has been in town this week and reports very fair business. J. B.

Detroit.

Mr. J. F. Sullivan has completed his new place and it is so well arranged for a general florist's business that a description may be of interest.

The grounds, 6½ acres, are situated 5½ miles from the City Hall on Gratiot Ave., on an elevation affording excellent drainage. The new greenhouses, ten in number, are each 100 feet long; 5 of them are 16 feet wide to be used for carnations, palms, smilax, etc; 1 10½ feet wide for small pot roses; 2 6 feet wide for propagating, and 2 18 feet wide for rose forcing houses. They are all built in the most substantial manner of cypress lumber; the entire upper woodwork is painted with two heavy coats of best white lead and all joints well saturated with white lead before being put together. A large shed 30 feet wide by 100 feet long runs north and south; on the west side are the rose houses and propagating houses; double thick glass, 16x20, is used, and glazed with zinc joints; a walk 2 feet 10 inches wide runs through the center of the rose houses, with a narrow walk on the outside of the two tables, each 6 feet 6 inches wide; the steam pipes are carried along the outside of these walks far removed from the roses and thus avoiding trouble from spider; these houses have 1¼-inch iron pipes for ridge and purlin posts, placed 6 feet apart in line, secured on the bottom with flanges screwed to heavy cedar posts. The six houses on the east side of shed and entering into same are glazed with single thick glass, 12x12, bedded in putty; all the houses have continuous ventilators running the entire length of the house, operated by the lever system, which is simple and satisfactory; the ventilators are all fastened with brass hinges and screws placed two feet apart; the use of brass in such an exposed place is a great improvement, as it precludes any possible danger from rusting and the annoying and expensive consequences.

There is a large cellar under the entire shed, half of which is devoted to the boiler and storage of fuel, the other half to the storage of bulbs, etc. The heating is done by steam furnished by one large boiler. One-inch pipe is used throughout the place for radiation; large main pipes run along both sides of the shed over the doors entering the houses supplying the coils of 1-inch pipe running under the tables, each coil having a return pipe entering a larger one running across the ends of the houses next to shed and giving excellent circulation, the large return pipe for condensation being nearly as hot as the steam pipes. Crude petroleum is used for fuel and gives entire satisfaction even at the high price of 75c per barrel. The shed has a 2-inch plank floor, double doors at each end affording facilities for driving teams directly through the shed for loading and unloading for any purpose in shelter. One corner is fitted up for an office, being partitioned off from the main body of the shed, with ice box, tables, shelves, etc. for floral work. Another portion is fitted up with stalls for all the different sizes of pots. Large water pipes are laid all over the place, with faucets in every walk in both center and ends of the houses, and in the shed at any and all places where water is likely to be wanted. The water is obtained from a creek running through the place and is pumped by a large windmill to a tank of 400 barrels capacity, elevated 60 feet above the ground, giving a strong water force which is very valuable for the destruction of spider and speedy watering of a large place. A neat barn 32x32 is built in the rear of the place for wagons and horses.

The residence, also new and of modern style, stands on the edge of a bluff overlooking the creek and Gratiot avenue and far enough removed from the latter to avoid annoyance from dust and passing traffic. The soil on the place is of clay loam and sandy loam which is well adapted to the culture of plants of all kinds. Large permanent beds of hardy roses will be planted and great quantities of lilies, for which some of the soil has a peculiar fitness. A considerable portion of the grounds will be devoted to ornamental shrubbery, perennials and small fruits.

OBITUARY.

CHARLES REISSIG, one of Chicago's oldest and best known florists, died at his home in Riverside February 24, aged 73 years.

He was born in Hamburg, Germany, August 20, 1818, and after leaving school was employed for a short time at the trade of boiler maker. In 1836 he went to Rio Janeiro and entered the employ of the Brazilian government as boiler maker, which position he filled two years, and was subsequently employed in the Brazilian government navy yards for two years, afterward for five years in the employ of the Brazilian Steam Packet Co. as a boiler maker. In February, 1845, he left Rio Janeiro for New York and from there went to Geneva, Wis. Not finding any opening there for his business he walked to Chicago, arriving in the spring of 1845. Two years later he opened a steam boiler and engine factory and built up a large business, giving employment to some 200 men. He did a great deal of work for the city of Chicago, especially for the city water works. In 1869 he disposed of his manufacturing business.

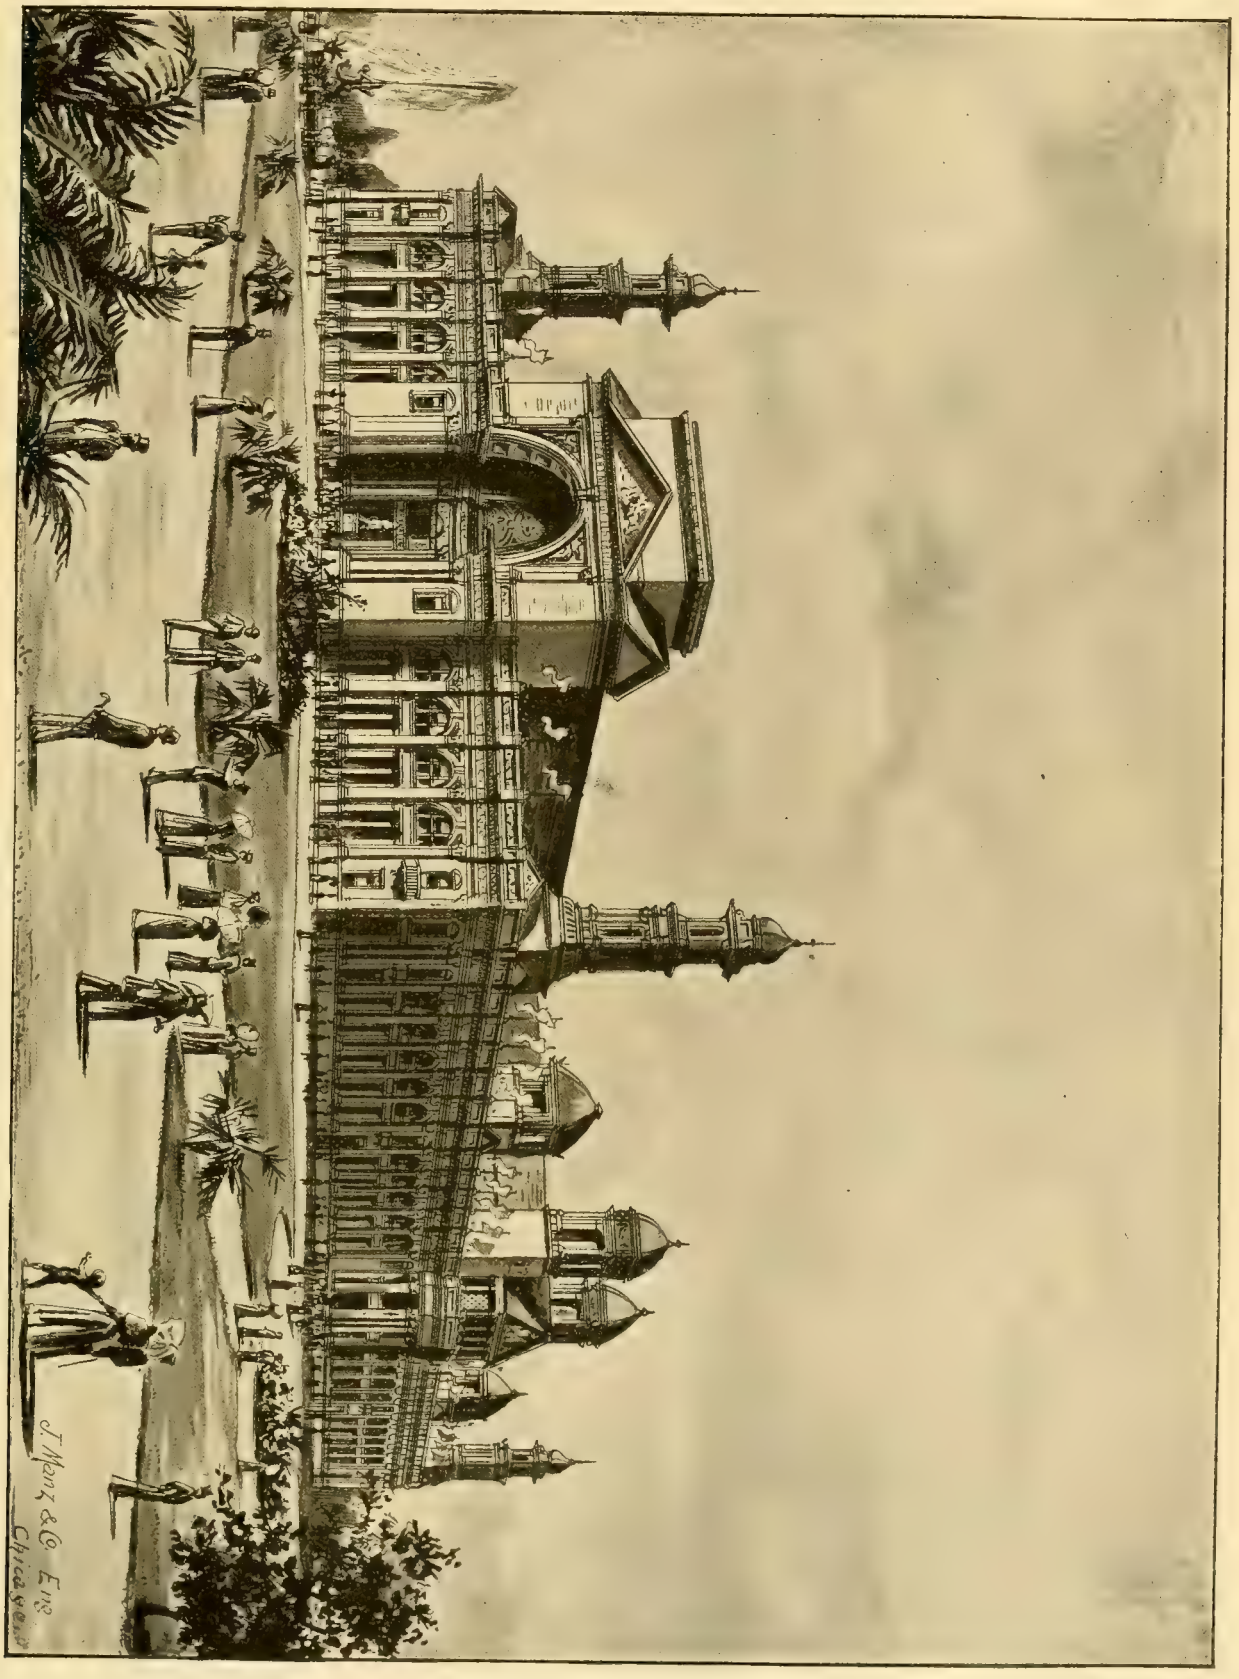
In 1856 he had built a small greenhouse at his home on West 16th street and began to cultivate plants for pleasure and after disposing of his boiler business in 1869 he enlarged his place and engaged in the florist business as a commercial venture and opened a floral store in Crosby's Opera House, which he retained until wiped out by the fire of 1871. After the fire he built a small greenhouse and store connected with it on Wabash avenue, near 14th street, later on removing to 86 Washington street and then to 66 Washington, where he maintained his city store for 3 years. In 1873 he built five large greenhouses at Riverside, to which additions were subsequently made until his glass surface reached 50,000 feet. In 1879 he removed his city store to Wabash avenue, occupying numbers 175, 167 and 169 at various times until 1889, when he moved to 31 Washington and from there to the Auditorium Building. He retired from active business July 1, 1891, disposing of his retail store and renting his greenhouses, with the exception of a house devoted to orchids and palms, which he kept and maintained for his own pleasure.

Mr. Reissig was married in 1872 to Mary Becker, who with the six children—Flora, Rose, Lily, Charles, Daisy and Paul—survive him.

That Mr. Reissig was held in high esteem for his many noble qualities was evidenced by the great number who braved one of the most unpleasant days of the year to pay a last tribute of respect on the occasion of his funeral, which was held at his residence in Riverside last Sunday. Though the roads were execrable and a cold rain was falling the large house was crowded and the funeral cortege was of unusual length. There was a large delegation from the Florist Club, from whom, in accordance with the widow's request, the pall-bearers were selected. He was laid to rest in the Forest Home Cemetery.

The floral arrangements at the funeral were very rich, but not over ostentatious. Many of the arrangements were of orchids of which Mr. Reissig was passionately fond.

Mr. Reissig leaves an estate of some magnitude, in spite of the fact that he was very liberal and lived well. He was very hospitable and his many friends were always sure of a warm welcome at his home. A good man has gone to his reward.



NEXT WEEK comes our special spring number and it will be a beauty. If you have not yet sent copy for an advertisement in it send at once or you will be too late.

MR. FRANCIS FELL has succeeded Mr. Thomas S. Ware of the Hale Farm Nurseries, Tottenham, London, England. Mr. Fell was for many years manager for Mr. Ware and the change in ownership will make no change in the management.

THE CHAIRMAN of the Committee on Floriculture, Horticulture and Viticulture of the Pennsylvania World's Fair Commissioners, estimates the cost of a proper display of trees, plants and flowers at the Chicago Exposition at $18,000 or $25,000 in excess of the amount assigned to the committee by the managers.

A NEW FUNGICIDE.—We are advised by Mr. C. H. Joosten, New York, that he will soon have completed arrangements for the introduction of a new and improved fungicide that is claimed to be not only more effective but cheaper and more easily applied than any of those at present in use. It is a very fine powder, applied in the dry state and will, it is said, like a cloud of smoke reach every part of plants to which it is applied.

LAST CALL for advs in the special number to be issued next week.

ELECTRICITY BUILDING FOR THE WORLD'S COLUMBIAN EXPOSITION AT CHICAGO IN 1893

The Electricity Building at the World's Fair.

The building covers a space of 700 by 350 feet, or more than five and one-half acres. Like most of the other buildings the style of architecture is Italian renaissance. It is 60 feet high and ornamented with designs suggestive of the department. It is one of the handsomest of the grand central group, and will cost $650,000. There will be four entrances to the building, the main one on the south. It will be built of a material resembling granite in color. A statue of Franklin will rise conspicuously before the south entrance.

SEND COPY at once for your adv. in our special spring number to be issued next week. This is your last chance to secure space in that issue.

Asparagus P.umosus.

I have a small stock of Asparagus plumosus. How shall I increase it? L.

C. L. WATROUS of Des Moines, Ia., has been selected as chief of the Iowa Horticultural Exhibit at Chicago.

WHEN sending us small amounts in postage stamps, please select those of the 2-cent denomination.

THE AMERICAN FLORIST

Advertisements, 10 Cents a Line, Agate; Inch, $1.40; Column, $14.00. Cash with Order.

No Special Position Guaranteed.

Discounts, 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent. No reduction made for large space.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

IN FRAMING rules and regulations for the coming exhibitions every care should be taken to have them so full and explicit that there shall be small chance for irritating differences of opinion to arise as to their exact meaning. The greatest danger is from rules enacted later conflicting with, or modifying, those earlier adopted and thus throwing the whole machine out of joint. General rules are always dangerous and should be adopted only after making quite certain that they will have no undesired effect upon any rules already adopted.

News Notes.

NEW ROCHELLE, N. Y.—The Rose Hill Floral Society gave its second annual ball February 25.

MASON, MICH., has no florist and a resident advises us that it would be a good point for a beginner in the trade.

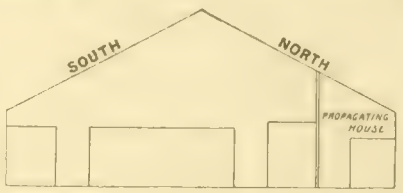
CEDAR RAPIDS, IOWA.—T. M. Giberson is building a new greenhouse. I. N. Kramer & Son are pushing the seed department of their business.

NORTH EASTON, MASS.—Your correspondent desires to correct an error in notes on orchids, Page 542, in which Odontoglossum Hunnewelliana is mentioned as one of Mr. Robinson's seedlings. It was sent out by a prominent European firm.

DES PLAINES, ILL.—F. L. Pruse, florist, suffered a loss of his greenhouse sheds by fire February 12. He suffered a loss of about one fourth of the plants in each house besides considerable damage to heating apparatus. Mr. Pruse was severely burned on his hands and face.

SAN FRANCISCO.—Roses have been very scarce since the middle of January and growers can command no price for them, the trade having fallen off about 50 per cent in comparison with last year. Narcisus and violets are now plentiful and some florists have piles two and three feet high in their show windows.

DEERING, ME.—Chas. Ramsey, landscape gardener and florist, died at his home on February 23, aged 76 years. He was born in Scotland. He lived in Deering for over 40 years and was for many years superintendent of Evergreen Cemetery. Many evidences of his skill as a landscape gardener exist in various parts of the state, where he has laid out many private and public grounds.



CHESTNUT HILL, PA.—Florist Thomas Butler of Wyndmoor, near here, arrived home on Tuesday from a week's stay in Sidney, Champaign county, Illinois. He was accompanied by his mother, aged 81 years, who will spend her remaining days with him. The old lady, who is enjoying excellent health, came all the way in a day-coach, preferring not to take a sleeper. This is the kind of stock florists come from.

GERMANTOWN, PA.—At the meeting of the Horticultural Society on Feb. 16 the subject of a chrysanthemum exhibition, to be held in the fall, was discussed and preliminary action taken. There was quite a display of plants and flowers, premiums being awarded to F. Smith for bletia and other plants, A. Muldoon for specimen azalea, Rob't Morrison and John Kirby for collection of azaleas, Woltemate Bros. and A. Muldoon for Chinese primroses and to Thos. Meehan & Son for collection of carnation blooms.

ELMIRA, N. Y.—Grove P. Rawson is building a new house 26x370; to be used for blooming roses in summer. The roses will be planted in solid beds. The house will have just enough steam pipes to keep frost out in winter. In these houses he gets his first crop in May and continues to cut high grade blooms until November. Mr. Rawson has also just completed a rose house 22x250 for winter forcing. The house is of cypress lumber put up in first-class shape, glazed with 16x24 first quality double thick Pittsburgh natural gas process glass, which he considers fully equal to first quality French.

North Side Propagating Houses.

For the benefit of those who have been asking what a north side propagating

house is, we present herewith a diagram showing a cross section of a house with a "north side" propagating house at the right.

POTASH SALTS.—Your correspondent can obtain potash salts of H. J. Baker & Bro., 215 Pearl St., N. Y. E. S. M.

VIOLETS.—Mr. Grove P. Rawson, Elmira, N. Y., sends us a bunch of 100 blooms of Marie Louise that it would be difficult to beat. All exceed an inch in diameter and the flowers are on strong stems and with handsome foliage. It is evident that Mr. Rawson has no need for a cure for the violet disease.

SITUATIONS, WANTS, FOR SALE

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—Any firm desiring a good all round man, please apply to ANCHORAGE ROSE CO., Anchorage, Ky.

SITUATION WANTED—As assistant Florist; general knowledge of greenhouse work. T. KEYS, 96 Linden Ave., Middletown, N. Y.

SITUATION WANTED—By thoroughly experienced florist to take charge of private or commercial place. Age 30; first-class references. FLORIST, Box 765, Kalamazoo, Mich.

SITUATION WANTED—By a gardener; two years foreman Botanic Garden, Hull, England, 1 year foreman and 2 years, private in Chicago. Address S. J. care American Florist, Chicago.

SITUATION WANTED—By gardener, married, no family; understand fruit, flowers and vegetables and general care of a gentleman's place. Age 35. Address J. T. Piermont, Rockland Co., N. Y.

SITUATION WANTED—By a reliable sober man; 9 years' experience in the cut flower and plant trade; 25 years of age, single; Swede. Address P. G. PERSON, care J. B. Heiss, 116 South Main Street, Dayton, O.

SITUATION WANTED—By a thorough, practical florist and gardener, fully competent to take charge of a first-class private or commercial place. Roses, carnations and violets a specialty. Address W. H. care News Co.'s Store, Elizabeth, N. J.

SITUATION WANTED—By a florist gardener, on large private place, or otherwise. English; single, 30 years' experience in England and America, private or commercial; East prefered. State wages. STRATTON, 610 19th, Street, San Francisco, Cal.

SITUATION WANTED—In store or office as general clerk or as bookkeeper. Experienced in seeds bulbs and florists supplies and with fair knowledge of plants and nursery stock: also through accountant, first-class references; moderate expectations. JOHN W. COBURN, 2207 Fifth Ave., New York City.

SITUATION WANTED—By a young American who speaks the German language; in greenhouse or outside work. Am good at growing stuff on the outside, also on landscape work. Have had charge of a number of first-class places in this country and can give good references. A good place and fair wages expected. Address M M. care American Florist, Chicago.

WANTED—A man acquainted with seed and nursery business. M 2, care American Florist.

WANTED—A good, reliable man for general greenhouse work. Give references and state wages expected. I. N. KRAMER & SON, Cedar Rapids, Ia.

WANTED—A first-class gardener to take care of a small greenhouse and grounds. Will furnish cottage for a married man. Address F. M. HUBBELL, Des Moines, Iowa.

WANTED TO RENT—With privilege of purchase, a greenhouse establishment, near Boston. Southern roads prefered. Address LOTHROP WIGHT, Framingham, Mass.

WANTED—A thoroughly reliable man, married or single, for general greenhouse work. Good wages. Reliable references indispensable. Address C. RAYNER, Anchorage, Ky.

WANTED—A young man one who has had experience and is willing to work at anything about a commercial place, either in store or greenhouses, single man prefered; good wages; must be well recommended. W. A. WETTLIN, Hornellsville, N. Y.

WANTED—A young man as salesman for a Floral department in a large dry goods store. Hours 8 to 6 and no Sunday work. Must have had experience in design work and decorating. Apply by letter giving particulars and reference to, BROWN, THOMSON & CO., Hartford, Ct.

WANTED—A thoroughly good man to take charge of a commercial place, one who understands the growing of greenhouse stuff and the forcing of roses, carnations and Bulbs of all kinds, also palms, orchids and smilax. $25 00 per month with room and board. MRS GEO R. FRAVELL, Marion, Ind.

FOR SALE.

Nine Green houses and seven hotbed frames, 12 000 square feet glass with circa two acres of land and stock for sale very cheap, and on easy terms. The houses are in splendid conditions situated in one of New England's best localities, with a large and extra good home market and established trade. The stock represent a wholesale value of over $5,000, in good and saleable condition for spring trade. New steam boiler with 3 000 feet of pipe, cost about $1,250; 20,000 pots all sizes; tools and implements. The price on property, land, houses with stock, heating apparatus etc, is $6,500, largest part of which can stay in the property. It is a splendid opportunity for one wishing to buy an established business, as the property is in first class condition, ready for the coming season. For further particulars write to

H. C. HENKING, Springfield, Mass.

FOR RENT,

ON ACCOUNT OF BAD HEALTH.

Ten greenhouses with stock. This is one of the best places in the United States for shipping purposes. You can ship plants all through the South in Jan. and Feb'y in open boxes, and that is a great advantage to a florist. You can establish a very large shipping trade from here south, as it is a great point to ship cut roses, as a man can ship all the roses he raises to Mississippi, Louisiana and Texas, and all other principal cities. There is one drawback to shipping roses from the North here—it is too far. This place has a large local trade and has been established since 1868, and is all heated by low pressure steam. We will be ready to rent by the 1st of June—with or without stock—and that is plenty time to plant your roses. Those that are planted in July produce more roses for the holidays than any other time. This is a good chance for a man to get a big start on a little money. For further information, apply to **H. MOORE, 54 Beal St., Memphis, Tenn.**

Rooted Cuttings.

CARNATIONS, CHRYSANTHS, GERANIUMS, COLEUS, VERBENAS and MISCELLANEOUS BEDDING PLANTS. Cheap for cash. Send for price list.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

FLORAL PARK, N. Y.—Mr. J. L. Childs has recently purchased a tract of land near the station, on the north side of the railroad, on which he will erect a large printing house, size 50x100 feet. It will be fitted up with the best machinery and will be a perfect model of its kind, costing when complete $40,000 to $50,000. It will be devoted to printing the *Mayflower* which now has a circulation of nearly 300,000 per month.

THE MAIL TRADE in the east to date is evidently off from 10 to 15%, not counting the prospective increase some always look for. Advertising is affected in the same way. One man explains it because the west is sending all the money east to pay off mortgages. The mail has miscarried to some of us if this is the case.

E.

G. J. LAMBRIGGER, the seedsman at Big Horn, Wyoming, is reported to have failed and left that part of the country.

MRS. WAYTE, wife of Alfred Wayte, formerly a florist at Queens, now a resident of Chicago, died recently.

THE Philadelphia seedsmen report business up to February 22nd considerably behind that of last year.

J. LEWIS CHILDS, of Floral Park, N. Y., is taking a rest for a few days in Washington, D. C.

FLORAL PARK real estate is booming.

The World's Fair.

The frame work of the supplementary greenhouses is already up. These houses are to be used to shelter plants received from now on and to grow them into exhibition shape, and also for the propagation of the vast number of bedding plants that will be needed for general decoration. The houses are eight in number, of which four are 100x26 and four 100x24.

The first exhibit on the grounds has been installed, and it is in the Horticultural Department. It is a group of six very large trees placed at the north end of the Hort. Building by P. S. Peterson, a Chicago nurseryman.

The cyclamen seed sent to Chief Thorpe in response to the circular published some time since, and planted under his supervision, is now coming up and the race is on. Pending the completion of the houses mentioned above Mr. Thorpe has space in the South Park greenhouses and here the little fellows are making their start. The European seedsmen responded as generally as the Americans and the contest will be very interesting.

Chief Thorpe's office at the World's Fair grounds is nearly completed and he expects to make his headquarters there in a few weeks.

The framework of the dome of the Hort. Building is completed and the roofs of the wings are also nearly finished. The staff covering of the sides of the building is also nearly all on. As it takes shape the building presents a noble appearance and its immensity fairly takes one's breath away. Certainly horticulture will be magnificently housed at the great fair.

MRS. J. S. R. THOMSON, Fort Mills, York Co., S. C.

New Double White Daisy Snow Crest.

—)o(—

A most distinct variety and an improvement on all existing sorts. Its habit of growth and size of flowers, in comparison with older varieties, is gigantic. The flowers, which are borne on stout, stiff stems from 6 to 10 inches long, are of the purest white and full to the center. When fully developed they rise to a conical or sugar-loaf form, and well grown specimens will cover a silver dollar.

It makes an admirable hardy garden plant or may be forced for cut flowers under the same treatment as violets. $2 per doz.; $15 per 100.

Dreer's Quarterly Wholesale List now ready; mailed free to the trade on receipt of business card.

The Violet Disease.

We print below a letter received from the director of the Purdue University Experiment Station, Lafayette, Ind., containing a request for diseased violet plants for the purpose of experiment. We hope this request will be freely complied with. This station has already done some valuable work in the investigation of diseases of plants of special value to florists and we feel confident that if the station is supplied with proper material the gentlemen in charge will give us some important information regarding the exact nature of the violet disease and best means of prevention and cure.

PURDUE UNIVERSITY
AGRICULTURAL EXPERIMENT STATION OF IND.

LAFAYETTE, IND., Feb. 24, 1892.

EDITOR AMERICAN FLORIST.—This experiment station is much interested in experimental work bearing upon diseases of ornamental plants and is already, as you are aware, conducting researches in that line

The violet disease discussion in your columns has attracted considerable attention, but there seems to be considerable diversity of opinion upon the matter. We have not been able to secure specimens of diseased plants for examination and experimental purposes. I wish that you would please state in the columns of your journal that we desire very much to secure specimens of diseased violets for study here, consequently I take the liberty of requesting all violet growers having diseased plants to send three or four plants to this station for examination and propagation. We would very much appreciate the favor of receiving such specimens. Plants may be sent to my address, expenses collect. By thus sending us specimens violet growers will be contributing to a work which is intended for their own ultimate benefit. Very truly yours,

C. S. PLUMB, Director.

THE Michigan State Horticultural Society held its winter meeting at Port Huron, Feb. 17 to 19.

ROSES.

A Chance to Triple your Money.

G. J. HORLACHER, Dayton, O.

New Style Rose Pot.

I send you a description of a new rose pot. The smallest size used in potting off cuttings from propagating bench is 3½ inches across top, 3 inches across bottom, 1½ inches deep, perforated with four holes in bottom. The advantage over the deep and narrow pots called rose pots are, first, in the growing of plants for forcing, the roots spread out more than they do in our present rose pots and are not injured by transplanting in shallow soil in beds, the depth of soil in bed being 2 to 3 inches; second, there is no necessity to tear away the soil from plants and thus injure the roots, as we do in our 3, 4 and 5-inch pots, called standards; third, being broad on the surface they have more benefit from the sunlight; fourth, being shallow the soil is not liable to become sour; fifth, they drain off surplus water more readily. I have tried them in a small way and have found them preferable to the deep and narrow so-called "rose pots." D. W. FOWLER.

Wabash, Ind.

Red Ants and Cockroaches.

In answer to F. G. I would say that I had several large colonies of ants located in my greenhouse and I treated them to a good sprinkling of dry snuff in and around where the ants frequented and in a very short time none were to be seen, neither was I troubled with them afterward.

Cockroaches may be killed by mixing together one part dry oatmeal to three parts dry plaster of paris and well sprinkle the dry floor at night where the cockroaches frequent.

G. M. STRATTON.

San Francisco, Cal.

American Carnation Society.

REGISTRATION.

Mr. Fred Dorner, Lafayette, Ind., registers Mme. Diaz Albertini, light pink, large and full; Mrs. Elizabeth Reynolds, large pink with long stems; Richmond, dark rose deeply fimbriated, large and good; Esther, light pink similar in color to Daybreak; Blanche, white, large flower on good stems; Spartan, brilliant carmine, large flower on long stems; Wabash, crimson, large flower with good stems; Lafayette, carmine, very large and full, long stems

DE WITT BROS.,

Cash with order. **BRISTOL, PA.**

Transatlantic Enterprise.

The following is a clipping from the enquiry column of an English horticultural journal. It is difficult to decide which is the most delicious, the question or the answer. On the whole we think we get more real fun out of the answer:

FLOWERS FOR PROFIT.—Would you kindly tell me what would be the best kinds of plants to stock a small greenhouse, size 4 feet by 3 feet 4 inches, and 6 ft. high at the back, sloping to 4 ft. 9 inches, facing west, with a brick wall on the south and east sides, so as to make a little money? I have bought some mosses, but did not get the name. Would you tell it me; also the name of the other, No. 3?—BLACKPOOL.

[We fear you cannot make any appreciable amount of profit from such a small house; and, as we have no idea of your skill as a cultivator, we can scarcely tell you what to grow. Some persons could grow several tea roses and sell the blooms. Others would strike fuschias, pelargoniums and other plants suitable for windows, also raise ferns and sell them to their friends. It is a question of individual aptitude and perseverance. Such dried scraps as you have sent are quite insufficient for identification. See the notice under "Names of Plants."]

Ants.

If your correspondent F. B. has never tried the following, I can recommend it as having proved effective with me whenever used: Take some "Coeters Rat Exterminator" and mix it well with some ordinary gum arabic mucilage; spread it on sheets of paper and place it in the runs of the ants and you will find that they have "come to stay." A. J. LOVELESS.

I see in the FLORIST a request for a cure for red ants. I will give a *sure cure* for ants, red, white or black. Get five cents worth of tartar emetic, mix with sugar and water and place in saucers where they are troublesome. I have never known it to fail, it is a *sure cure*.

J. R. B.

I place fresh bones among my plants and when the ants cover these, preferring them to the plants, I destroy by dipping in hot water. C. H. GLEASON.

Seneca Falls, N. Y.

VERBENA and PANSY BASKETS.

L. T. SEAVER, the leading Pansy Grower of America, and who wholesales in every city in New England, and many large cities in N. Y., now offers to the public a new **Verbena and Pansy Basket,** which is better and cheaper than any yet made.

ADVANTAGES OVER OTHERS IN USE.

1st.—They have a wooden ball that can be adjusted to the basket as easily when filled as when empty, by inserting a wire from outside, without disturbing the plant.

2d.—All balls are formed when shipped, causing no breaks or bending while adjusting.

3d.—In place of tacks, so generally used, they are secured with wire clinching staples—a new patent method. Size 5x10 x 3 inches deep.

Price $12 00 per 1000 net. Must order early. Samples sent if called for. Also a specialty of Bugnot and Seaver Pansy Seed.

L. T. SEAVER, N. Somerville, Mass.

SUPERIOR STRAIN OF

ASTERS

GROWN BY

JAMES SEMPLE.

I offer my superior strain of Aster Seed for sale for the first time. White, pink, and mixed white and pink. Trade pkts. $1.00. The stock being limited all orders will be filled in rotation as they are received.

For Sale by

JAMES SEMPLE, BELLEVUE, PA.

AND

LUDWIG & RICHTER, Florists, ALLEGHENY, PA.

Pittsburgh, Jan. 20, '92.

MR. JAMES SEMPLE, Bellevue, Pa.:

I consider your Asters "Mary Semple" and "Semple's White" the finest strain without exception, that I ever saw. Yours truly, N. PATTERSON.

Allegheny, Pa., Jan. 30, 1892.

MR JAMES SEMPLE, Bellevue, Pa:

We can tell every florist in the country it is the best Aster in cut flowers for florists' use; has long stems and in good colors. LUDWIG & RICHTER.

Allegheny, Feb. 1, '92.

After years of careful selection of the most perfect flowers of Asters saved for seed, Mr. J. Semple has brought this fine strain of Asters up to perfection. The fine perfect flowers, long stems and delicate colors make this a perfect gem of Asters. As I have seen them growing in the field must pronounce them the finest sight that ever came to my notice of Asters. WALTER HARVEY, Florist.

"Decidedly the best Aster we have seen." AM. FLORIST, Sept. 24, '91, page 141.

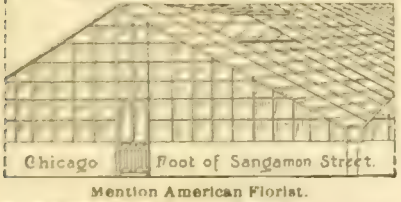
When writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

Shading Greenhouses.

As to shading greenhouses, I find white lead made thin with naptha and sprayed on with a syringe, to answer every purpose, as a shade. In the fall on a rainy day it can be washed off very quickly with a long-handled brush and a little concentrated lye in water.



For protection against frost, I use outside board shutters, made of half-inch spruce, three feet by six feet. They are easy to handle, save their cost in coal every month and give a feeling of cosy warmth in the houses not attained in any other way.

For partial shade lattice made of mason's lath, with one wire nail at each end of a lath, the laths running only one way and parallel; this sort of lattice gives a shade which can be regulated by moving the slats more or less toward a diagonal position to the end laths. R. FERRIS.

[The plan of protection by board shutters might do for one or two greenhouses, but for the average commercial establishment, and where houses adjoin one another, it would be hardly practicable. We are assuming that the shutters are placed on the roof by hand and securely attached, for if not well secured to the roof, they would be dangerous on windy nights—and it is on windy nights that we need them most.—ED.]

WE THINK this issue may safely be called a mirror of the trade in America at date.

THE THEORY OF DESIGN IN DECORATION

I.

It has been suggested that I should give the readers of the AMERICAN FLORIST some practical suggestions for floral decorations, based upon the theory of design.

Nothing is easier than to give suggestions and perhaps nothing is more difficult than the attempt to carry them out. It is at once a question of practicability. Theories are sometimes apt to be impracticable, yet there never was one which did not prove itself to be a stepping stone over impassable ways to the solid ground of truth. If the artist is safe in the following of certain principles of design the florist will be likewise safe. Differences of opinion in regard to the force and value of these principles will in no wise nullify them, and he who casts them aside is like the mariner without sun or star; he travels on dead-reckoning, incurring immense risks.

I will try to explain simply what these principles are, but it must not be forgotten that they are always subject to modification by circumstances.

FIG. A.

If one should say to me: "Here are smilax, roses, pinks, laurel and azaleas, and yonder are doors, windows, chandeliers, mirrors and vases, now what is your advice for combining all these things into a unit of artistic effect?" I should answer: "Try to use them simply and naturally."

Naturalness and simplicity are two fundamental principles of all good deisgn. It is a mistake to believe that the artist creates by the aid of complicated rules; his best work is always characteristically spontaneous and simple.

The point where failure begins is that marked by an attempt to overdo matters. It is not impossible that an abundant use of flowers and greens in decoration may result in the worst possible taste, for no other reason than the fact that such an abundance may tempt the decorator to crowd, confuse and thus ultimately destroy all refined artistic effects.

A wreath hung in one part of the room may be exactly proper and artistically perfect; another hung somewhere else to *balance* the effect will destroy every element of success in the decorator's work. The little festoon under the title of this article, though conventional in type, will show what the florist can do in a simple bit of *balanced* decoration. Figure A, which is the same idea rendered still more conventional, shows how far we may carry exact symmetry with perfect good taste. These festoons are admirably adapted to the decorations of Colonial houses. But to look well they must be made in the proportions given in the sketch (note the dotted lines).

It is a faulty idea to suppose that any good decorative work must preserve a certain exact balance either in its details or in its prominent points. Nothing is so unnecessary as this to perfect art. Whatever there is of value in balance of design I will have something to say about later on. But at present it is the *last* thing we need to bother our heads about.

Open spaces or plain undecorative surfaces possess an absolute value in decorative art. If every space and every wall is completely filled up with ornament (whether floral or not) there is no rest for the eye any where; and the impression conveyed to the mind is sure to be confused.

The arrangement of contours and lines is a matter needing the utmost care. All lines are of special value in the definition of certain spaces which the decorator wishes to emphasize in his scheme of ornament; whether curved or straight they should not intersect each other, unless for the purpose of producing certain relative ornamental spaces. The indiscriminate crossing of curved lines is sure to produce an impression so confusing that the eye can not follow any single graceful curve (see Fig. C).

Passing now from these general principles to some of the conditions which surround the florist, especially in his work of decorating rooms, we will presently see where we may apply such principles with advantage. I would *not* cross the surface of a mirror by any festoon. This is a matter of opinion and not one of principle. The value of a mirror lies in its ability to double space and quantity. A festoon cutting across it will double quantity where we do not want quantity doubled, besides interfering with an effect of space which we wish retained. Such

AROUND A MANTEL MIRROR

FIG. B.

an intersecting line would interfere with perspective which we should be careful to preserve, particularly in a moderate sized room which is to be filled with company.

If it is possible to place a large handsome vase of flowers where the mirror will reflect it such opportunity ought not to be neglected. And the skillful arrange-

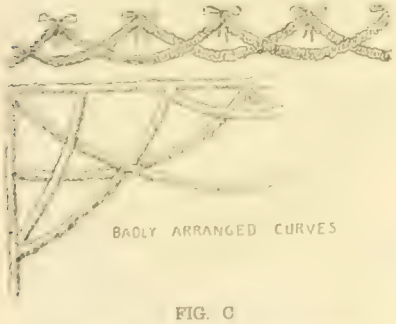

FIG. C

ment of his flowers by the decorator in a position opposite a large mirror will prove no small element of success in his decorative scheme.

Sometimes a solid, unbroken background of laurel leaves extending over a good portion of one wall in a room will produce an astonishingly rich effect, and columns or posts twined with green interspersed with white, yellow or pink blossoms will always look dainty and fresh if the green is not scrawny and the flowers substantial and evenly distributed. A mantel over which a large mirror is set is a splendid chance for doubling the effect of flowers in a mass; pansies, primulas or violets may be bedded on the shelf with charming results, but by no means is it ever advisable to mass such flowers solidly without their foliage.

The outlines of the mirror may be followed in a free or severely straight line by whatever green is near at hand; and at only *one* side a vase containing a naturally disposed group of tall stemmed flowers will complete the artistic appearance. The illustration B will show in a rough fashion about what the arrangement of different groups ought to be. A may be a tall vase of roses; B will be a group of straight stemmed flowers like the carnation or narcissus; C should be violets or some similar flower; D should be an accented part of the same group, and from E to F a trailing vine like ivy should help out the line effect by a few curves. Around the mirror any graceful green like smilax may be trained. Thus the mirror will reflect uninterruptedly everything opposite and the number of blossoms about it will be apparently doubled.

It is unnecessary to say that any arrangements like the following will not do as well artistically. It is always advisable in a decorative scheme that there should be a well defined motive which is best expressed in color effects. Thus the predominence of pink, yellow, lavender or blue, or of certain flowers like the rose, sunflower, violet and lilac will produce an impression on the mind at once unique and permanent.

The unity of such color effects is charming, and it must be remembered that the florist needs every possible accessory to help him in his art. Ribbons of satin, fairy lamps, candles and candle sticks (silver if possible) and certain colored vases and draperies are all essentials in the success of his color scheme, and it is perfectly just to say that the public is

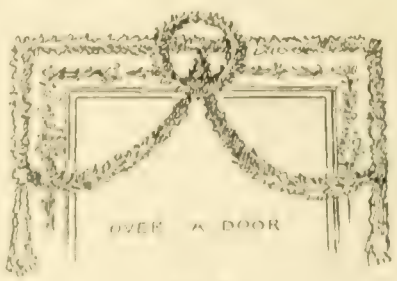

FIG E

quick in appreciation of any attempt made by the florist to follow out an æsthetic idea.

The use of delicately colored tissue paper for accentuating the color effect is a great help in a wide scheme of decoration. The tying of festoon ends with glossy ribbons harmonious in color; the nice adjustment of colored artificial light over a group of queenly roses; these are all the properties of the florist decorator. Then, too, in certain times of the year the florist should take advantage of materials in season. For instance, wheat, hops, maize and autumn leaves.

Figure D is an arrangement of a doorway for some autumnal occasion. Autumn leaves, bitter sweet, chrysanthemums and Indian maize are capable of producing a fine effect together. A little ingenuity, a few fine specimens of maize stalks, plenty of laurel leaves, some yellow chrysanthemums, and if possible some well dried bitter sweet—these will astonish one with their artistic possibilities. We need to get away as far as possible from the conventionalities of custom; and such an arrangement as that in Fig. E, though good, is less desirable than that in D.

There are other arrangements which are thoroughly good, but they will require considerable space and attention, and we must reserve their discussion for a later issue. F. SCHUYLER MATHEWS.

Covering up the Stumps of Trees.

I had this photograph taken to show your readers how easy it is to render an unsightly old stump of a tree quite pretty by encasing it in a covering of vines. The old trees (2), as you will readily perceive,

FIG D.

are red cedars (Juniperus Virginiana) and the vines used to encase their trunk are Ampelopsis Veitchii, two years planted. The ground they are in is good, to be sure, but just see what can be done in this way in a couple of years! Now, if you are a local florist and had a stump about your place covered up with vines in this way, don't you think that old stump would sell a good many plants of ampelopsis for you? Show it to your customer and let his own eyes convince him that he needs just such vines as they are and just for such a purpose.

In the same way we use several other vines such as Ampelopsis Roylei, which is like a major Veitchii; also the climbing hydrangea and schizophragma and Decumaria barbara. In sheltered shady places a few of the hardier ivies (Hedera) are also used.

1 2 3 4

COVERING UP THE STUMPS OF TREES.

Referring again to the illustration, the long needled pine tree (1) to the left is Pinus excelsa, the Bhotan pine and one of our handsomest evergreens for a sheltered nook; (3) represents the tip of a large triangular bed filled with the white day lily; (4) is quite a pretty specimen of Picea Smithii or morinda, as it is also called, a handsome spruce tree from the Himalayan Mountains. WM. FALCONER.

Adiantum Capillus-Veneris.

This useful fern seems to be very little known among growers, though one of the easiest grown and most useful of all the adiantums.

We have on the place here a piece of bench 4x20 feet which was planted with this fern seven years ago and it is now a solid mass of crowns—originally 80 plants. This bench has paid us better for the labor and outlay than anything else we have ever grown. During these seven years the house in which the ferns are growing has contained various crops requiring radically different treatment, but the ferns have kept on growing and furnishing the daily supply of beautiful dark green fronds, 12 to 18 inches in length, summer and winter without intermission.

They stand watering with the hose and tobacco smoke with impunity.

Compared with A. cuneatum it is more easily grown, adapting itself more readily to adverse conditions, and its keeping qualities after cutting are far superior; on the whole a much better paying sort to grow. Those who are compelled to grow a mixed lot of plants in one house will find this fern very useful, for the conditions most advantageous for geraniums, fuchsias, etc., suit it to a dot.

Bay City, Mich. JOHN IRVINE.

ROSES

Eel-Worms in Roses.

During the past few months there have been many complaints on the part of rose-growers because their plants failed, or partly failed, to produce a healthy growth and a good supply of blooms. While there are several causes for this sad state of things one of the leading reasons for distress is a microscopic worm that works principally at and in the roots.

These worms are in form like that of an ordinary eel and under the microscope are seen in almost constant motion. They cause an enlargement of certain portions of the roots, which swellings are sometimes called galls. These galls or knots are easily detected with the naked eye when a plant is removed from the soil and carefully washed of the adhering earth. The engraving is designed to show the general appearance of a portion of a root of a rose that had sickened from the inroads of these worms. As the minute animals are not unlike the worms found in vinegar they are sometimes spoken of as vinegar eels. The term nematoids is also given to them, but whatever the name they go by there is no doubt of their injuriousness.

The point that most interests rose-growers is how to get rid of the pest. In order to do this it will be of much assistance to know where the worms come from, how they propagate and get into roots of the infested plants. These eel-worms are much more abundant than generally supposed and it is only when they get numerous that their mischief becomes apparent. In looking up the subject of tomato blight in the south last spring it was observed that the tomato plant was, almost without exception, more or less affected with the root-galls; and the same is true for a large list of plants both herbaceous and woody. The nematoids, are as a rule, much more abundant in warm climates than elsewhere, and the unusual abundance of these pests in nothern gardens for the past two years is likely due to the lack of freezing of the soil.

The greenhouse furnishes the proper conditions for the propagation of the eel-worms provided they are there to begin with, this naturally raises the question of how they first got into the bed. This may be in one or more of several ways. They may be already in the roots of the plants, but in small numbers, when the plants are placed in the house. To guard against this the roots should be examined as closely as possible for the galls when the beds are set. All galled roses (and violets as well) should be excluded. The nematoids may come in with the earth. As before stated the worms infest a large number of kinds of plants and it is an easy matter for them to come with the soil. Soil that has not been used for growing plants in the garden is not necessarily free, but may if taken from a pasture or meadow contain many nematoids. Then again they may be taken with the manure that is used.

ROOTS OF A ROSE INFESTED WITH EEL-WORMS.

Just what may prove to be the best precautions remains for the practical rose grower to determine. Cold in excess will probably destroy the worms and likewise a high temperature is inimical to them. Both of these conditions may be impracticable to apply to the soil, the one being impossible in some cases and the other too expensive. Rose growers might make the experiment of heating the soil of a small portion of the bed before setting the plants and satisfy themselves if such a treatment will pay. If manure is the chief vehicle of the worms it may be possible to grow roses without so much of this constituent of the rose soil. It may be that roses can be grown with a formed soil to which all the necessary elements of plant food have been added in the form of commercial fertilizers. It may be however that the pampered rose will not perform her part unless fed in the ordinary way to which its ancestry has been accustomed.

The fact is that the worms are doing much damage and when they are once in a plant there is no known way of driving them out. New conditions may induce the formation of new roots and a sickened plant may revive but this is not to be expected under such circumstances.

It is possible that some substance may be put upon the soil that, while not injuring the roses may kill the worms not already in the plants. Lime has been thus used and with favorable results. Sprinkle the lime upon the surface of the bed or better mix it with the soil and each watering will tend to bring it in contact with the tender bodies of the worms. It is not unlikely that some of the fertilizer compounds may be found that at the same time they furnish food for the plants will deal a death-blow to the nematoids. Kainit may thus prove an efficient remedy and it only remains for some enterprising rosarian to take the matter in hand and demonstrate the truth or falsehood lurking in the suggestion. It is easy to obtain and apply and the amount to use must be determined by trial. This an age of experimentation; therefore experiment.

BYRON D. HALSTED.

N. J. State Exp. Sta. New Brunswick.

WE ARE advised that Mr. F. L. Moore has changed the name of his new rose from "The Hugh" to "The Bridesmaid."

HOUSE OF ROSES FOR SUMMER BLOOM.

Summer Roses.

The demand for high grade summer roses is annually on the increase. From the middle of June to October, as a rule, the supply of roses is decidedly limited and what there are to be had are of only moderate quality. Roses that force well during winter may not prove desira le for summer bloom, and vice versa. Brides and Mermets are a good instance of this rule. In summer heat Mermets are small and Brides are apt to be spotted and malformed. La France is the ideal summer rose for pink, Cornelia Cook for white, while Perle and Sunset are both first class in every respect. Provided Perle and Sunset could be equally well relied on for winter forcing there would be no need of looking farther in this line of color, but in the dull days of winter one sighs for a golden Mermet. Aye, and a crimson Mermet wouldn't be bad either! When these two roses put in an appearance what a scramble there will be for stock! I should not be surprised if that in the over-propagation resorted to even *root* cuttings would be made and possibly both varieties lost altogether, illustrating the old adage, "haste makes waste." However, one need not worry, sufficient unto the *evil* is the day thereof!

For summer roses grow Perle, Sunset, M. Niel, Niphetos and other half hardy sorts together in one house, with just enough heating capacity to keep out severe frost. La France, Cornelia Cook, Am. Beauty, Meteor and others require no fire heat in winter, yet it is advisable to have some heating surface, for occasionally even in summer a little judicious firing will give better buds and protect from mildew in a protracted spell of cool damp weather. Houses for summer roses can be built much cheaper than for winter forcing—no side light required. An equal span roof is to be preferred and with continuous ventilation, but don't give even summer roses pneumonia with too severe draughts.

I have several houses 13x100 feet and one, now in the process of erection, 26x370 feet, side walls 4 feet, ridge 10 feet. A house 26 feet wide gives you four 5-foot beds (I much prefer solid beds for summer, as I do benches for winter), with three 2-foot walks. Some would make the middle bed wider and have but two passage ways, but I consider three better, giving easier access to the roses in cutting besides saving time in working among them.

Give these solid beds good preparation on the start, free drainage and a generous depth of suitable compost. The first season the roses are planted you cannot reasonably expect very much, but thereafter, with any sort of decent care, you will be amply repaid by generous bloom and of good quality. In November the roses are dried off for the winter, by simply withholding water, and this dormant or resting period gives them renewed vigor for the summer campaign, a la nature. Prune them back before they start in the spring, cutting out all useless or weak wood, mulch well and they will soon be ready for business. The first crop can be brought in for Easter, with sufficient heat, or left to come on naturally in May. One advantage in having houses for summer roses, the forcing houses can be cleared sooner, thus affording an early start towards the next season's crop, an important item too. It certainly does not pay to be late in planting roses for winter forcing, otherwise you are quite apt to feel it the whole season through.

A house of hybrids treated in this way, with or without heat, furnishes a quality of flowers impossible to secure in the open air. Rich coloring, perfect shaped blooms, with fine foliage, which I think will repay the grower who has any use for good stuff, even if the hybrid crop is necessarily a short one. I find my summer roses very useful indeed and profitable. Roses even in summer have a cash price, according to quality, and like fresh eggs will sell at some price while other available flowers at the same season may go begging.

The engraving shows one of several houses, each 13x100, the heating pipes arranged overhead so as not to lose any ground room. This house contained when photographed 550 plants of La France, 150 of American Beauty and 100 of Perle. The photograph was taken June 20. GROVE P. RAWSON.

Elmira, N. Y.

Answers for Beginner.

1. It will pay well to put from 16 to 20 inches of glass in front of all outside benches.

2. Use only sashbars grooved for drip.

3. Eight 2-inch steam pipes will give plenty of heat for the house described. Would strongly recommend a 2-inch overhead pipe. Two of our houses, 16x124 feet, 9 feet to ridge, we heat with a 2-inch flow overhead and eight 1-inch return pipes under benches, and we have a good carnation temperature, when it is 30° below zero outside.

4. When firing heavy we syringe every evening. At daytime do it often enough to keep spider down, and never allow plants to droop for want of water at the roots. Use slate and iron for benches if you are going to stay at the business long. Benches 3 feet wide, 6-inches deep for light soils, and 4 or 5 inches deep for heavier soils, may be made of 2x4 studding and rough 1-inch pine lumber, that will do nicely for from 3 to 5 years.

5. Smoke at least once a week. We find it better to smoke lightly twice a week. It is a great deal better to keep Mr. fly out of our houses, than to let him get a good start, and then injure a lot of plants trying to kill him.

6. Smoking is much more effective than scattering stems and much neater too.

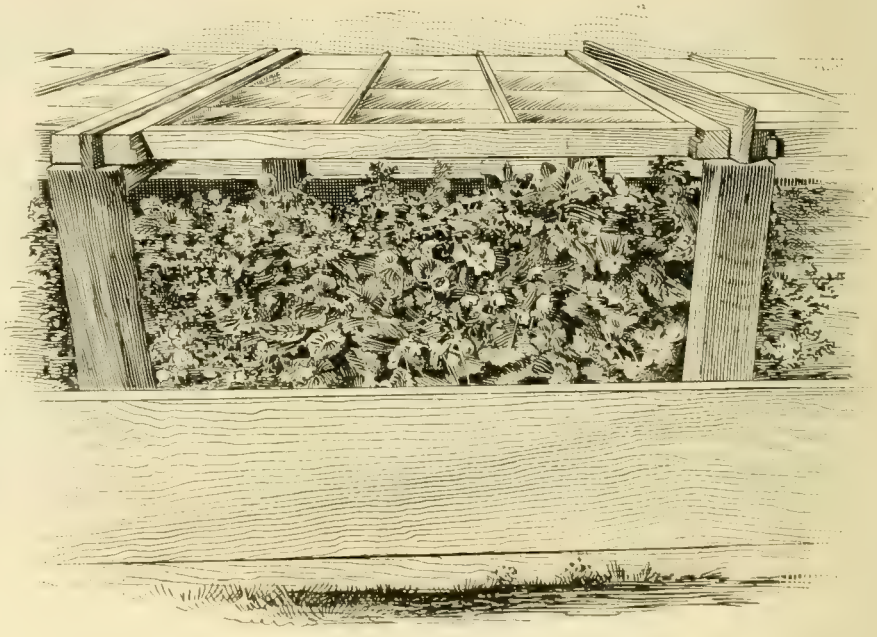
7. We generally dissolve insecticides in water and apply with a syringe.

Des Moines, Ia. J. F. MARSHALL.

Carnations and Picotees.

In the AMERICAN FLORIST of January 28 Mr. Benary expresses surprise that carnation Germania is not cultivated in America. It is a great pleasure to me as an old florist to read the AMERICAN FLORIST, which comes to me regularly, and to see that the carnation is so very popular in the States and that carnation societies are being formed. But with you the tree, or perpetual, carnation varieties are in request and are grown in large quantities. We also have these varieties, and although we have some very fine varieties they are not so popular as compared with the grand selfs, fancies and show varieties of carnations and picotees recognized by our florists as exhibition flowers.

Germania is everything Mr. Benary says of it, a grand flower of large size with broad well formed petal of large size, smooth on the edge and on the surface, a well formed pod and an excellent grower, throwing plenty of grass. It took our English florists by storm when first introduced five or six years since, and Mr. Benary has followed it up by the introduction of other splendid varieties, many of them of new shades of color and possessing the admirable properties of Germania. In such new sorts as Stadrath Bail, Schleiben, Von Helmholtz, Frederich Alexander, Esmarch and Nora, all of Benary's introduction, we have some superb acquisitions.



Our English florists are also at work with the hybridization of the carnation and picotee, and the veteran, E. S. Dodwell, of Oxford, has raised and sent out some very fine sorts, of selfs and fancies especially, and almost all our fancy varieties have a yellow ground color. Mr. James Douglas, of Oxford, is also to the front with some superb yellow ground varieties such as Almira, Colonial Beauty, Terra Cotta, Annie Douglas, and especially with that wonderfully fine variety Lillian, sent out last year, truly a grand yellow with bright crimson and carmine markings. Mrs. Robert Sydenham is another splendid variety raised by Mr. Douglas. A neighbor of mine, Mr. C. H. Herbert, grows a wonderfully fine collection of quite 200 leading varieties, and almost all in pots eight inches in diameter. Quite 800 pots will be flowered this year and he has recently added quite 50 new varieties from Germany, besides English raised kinds and two new varieties of his own raising, Blushing Bride, a superb self of a blush tinted white color, and A. W. Jones, deep yellow striped with bright scarlet, are two flowers you would be greatly pleased with.

Mr. John Thorpe, whom we know this way, for he was a near neighbor at one time, when a resident at our famous Stratford-on-Avon, and whom we rejoice to see in the proud position he has attained in the States, was rather laughed at some time since for what Prof. Bailey called "John Thorpe's ideal bloom." But we have reached that for some time and many of our fine kinds are, when in fine form, four inches in diameter, and Mr. Herbert has a seedling from Germania which exceeds it.

I wish we could get blooms to you in August, our blooming time here, as all are grown in pots out of doors with only shelter from rain and too much sunshine. But that is not possible, but I hope some of your florists will take up these varieties, as I think they would become very popular with you. Their exceeding beauty, large size of flower, broad smooth petals, free from serratum on the edge, for that is a *sine qua non*; their fine pods which do not split and long stems are all in their favor.

If your carnation societies will make it almost imperative that all seedlings shall be submitted for judgment before they are sent out, you will be spared the infliction of many worthless varieties, a subject on which Mr. A. M. Herr writes so well. We find over here that most raisers think highly of their own seedlings, but our carnation societies do a world of good in checking the sending out of new sorts which have not received a certificate from one of the societies.

Birmingham, Eng. WILLIAM DEAN.

SUMMERING TENDER FLOWERING PLANTS.

Kennett Square, Pa.

The meeting of the Chester County Carnation Society March 5 was slimly attended, the weather being extremely inclement.

Several exhibits of seedling and new varieties were shown by Warren Shelmire —Cæsar, Brutus and Pride of Penshurst; by C. J. Pennock—a scarlet unnamed; also a magnificent display of a strain of Marie Louise violets from Geo. Creighton, many of which exceeded in diameter a silver dollar. A letter from Edwin Lonsdale expressed regret at not being able to be present and said he was not able to send specimen blooms of Grace Battles as the supply was unequal to the demand at $4 per 100.

A sample of the McKay planter was shown by Henry A. Dreer and in practical work demonstrated that carnations and other plants could be rapidly and successfully planted. The "Scott distributor," for mixing and distributing insecticides, was also exhibited.

The members attendant at the Buffalo meeting of the American Carnation Society reported on the trip and entertained the society for some time. C. J. Pennock read extracts from Prof. Bailey's unpublished paper read at Buffalo on "John Thorpe's ideal carnation." Mr. Jos. Phillips thought the "ideal" would not be reached until we increased the constitution and strength of the plant.

The subject for the next meeting was announced: "Resolved, That our present system of propagation and growing the young carnation is injurious to the growth of the matured plant." C. J.

AN ORNAMENTAL GRASS BED.

Summering Tender Flowering Plants.

The engraving gives a fair idea of what might be termed an outdoor summer house for tender flowering plants, bulbs and miscellaneous stock kept over summer.

Take an old hotbed frame, raise the sash bars 2 or three feet by nailing a board at each end of bar, slanting the bar to the south, put on the sash, whitewash or paint glass and you are ready for business. *Always* run the frame east and west. Have 16-foot strips 3 inches wide to lay on the sash and fasten down when there is likely to be a wind storm. With a hose for watering there is no need of moving sash.

Towards the end of June the odds and ends usually seen in commercial places have a decidedly "tired" look. If they be gathered together, cleaned up, repotted and half plunged in frame here described, they will soon be beautiful plants and the flowers cut from them can be sold for more than enough to pay for all the trouble, besides giving good healthy stock to propagate from in fall and winter. Fuchsias, ivy geraniums, tuberous begonias, hydrangeas and nearly all bedding plants will do wonderfully well when so managed.

The frame as here described, and from which this rough sketch is taken, was seen at J. C. Vaughan's place at Western Springs, Ill., last summer. The display of tuberous begonias in pots grown in this frame were simply magnificent and all other plants presented a healthy, fresh appearance not seen when grown inside during the hot months. P.

An Ornamental Grass Bed.

This picture of a grass bed on our place is from a photograph taken by Mr. L. Hallock last September. The bed is both a striking and ornamental feature at Dosoris, and I think my esteemed friend Mr. Temple, of Davenport, Iowa, went into as great ecstacies over it as anything else he saw here. The bed is cut out in grass and its proportions are quite large.

The front belt of grass which you see in bloom is Pennisetum longistylum, an Abyssinian species. It is not hardy, so I treat it as an annual, save some of our own seed in September or October and sow them in a flat next March. The seedlings grow quickly, and by potting them off singly I have nice plants to set out about the first of May. Plant them a foot or 15 inches apart and 2 feet from the out edge of the bed, for they fill up quick. By July they have met and are in bloom and continue in bloom and increased profusion till October. And, let me tell you, big bunches of these grass blooms are elegant when cut in summer.

The next row is of striped variegated leaved eulalia. It is hardy and left out all winter with simply a mulching of leaves and litter drawn over its roots. The eulalias had not begun to bloom when the photograph was taken.

Back of the variegated eulalia is the zebra striped eulalia, which curious enough is the most vigorous of all the eulalias, even more so than of the typical plant.

Behind the eulalias are a clump of tall leafy waving reeds, they are Arundo Donax. It also is hardy with us in the same way, that is under a heavy mulching in winter. It does not come into bloom till the end of September, when its longest canes run about 18 feet in height. About these arundo canes I may say when we cut them down in November we use them tied erect between slats as a protection from wind to some of our finer tall evergreen trees.

Many other grasses occur about the flanks of this bed, as it touches into a

shrubbery group, but they are not shown in the picture.

Do you see, all the plants used to get up this fine clump are perfectly hardy except the pennisetum which we treat as an annual.

Passing along the stone walk to the turn of the bed the big bush with a few white flowers is Rosa rugoso alba, a splendid shrub, hardy as a rock and most always in bloom.

Beyond it is as handsome a specimen of the snowdrop tree (Halesia tetraptera) as one could wish to find, also plants of H. diptera and H. Meehani.

WM. FALCONER.

Greenhouse Ventilation and Ventilating Sash.

BY J. D CARMODY.

A proper attention to ventilation is an important part of the requirements in successful cultivation of plants and cut flowers under glass. It is a fact, however, that in the past too little attention has been paid in the construction of greenhouses to provide an effective and convenient means for the performance of this necessary duty.

It has been within the province of the writer to visit floral establishments in all parts of this country during the past few years, affording ample opportunity to note many mistakes that excited our sympathy for the proprietor, who unwittingly saddled himself with an endless amount of hard labor in the handling of badly constructed ventilators. It may not be amiss to describe some of the "freaks" we have seen.

At one place a party had just completed two new houses 100x20 feet. The ventilators were a continuous line of sash, three feet deep, hinged at the lower end, the upper end closing against the center ridge pole. So far all right, now comes the blunder. The sash at the lower end did not lap over the glass and rafters below, but were sunken down flush with nothing to cover the joint between. The result was, most of the rain falling on the sash and all the drip fell inside of the house to the ruination of plants below. On asking the proprietor why the sash were so arranged he replied, "The carpenter put them in that way, I was busy with my plants and did not notice." Right here we will say there are few house carpenters that have any correct ideas of greenhouse construction, and unless the florist knows what he wants and how to direct the details many expensive mistakes are liable to appear in every job entrusted to their hands.

Many plant houses, otherwise well built, have a very inadequate amount of ventilation, say from three to six small sash scattered along in the length of a 100 feet of glass; these hinged at the upper end so that when lifted the wind has free opportunity to blow in from front and on either side directly on the tender plants within, "tender" because grown in an atmosphere insufficiently supplied with good air.

One very common error is the location of ventilating sash between stationary ones or side rafters. The movable sash may work all right one day and the next be swelled so tight "John" will have to climb on the top of the house and pound it down with a hatchet. To avoid this trouble have the sash lay on top of the rafters, or if the house is made entirely of sashes let every other one lap over an inch on each side of the ones below, closing up the opening at the foot with a piece of plank cut to fit.

It is a mistake, where sash are hinged at the bottom, to fasten the hinges to the under side of the sash, for the water of condensation keeps them wet and rust soon destroys them. The better plan is to nail or screw a block the same thickness as the sash, the width of the hinge and 6 or 8 inches long, on top the rafters close up against each lower corner of the sash; these blocks will hold the ventilator firmly in position and make a secure place to hinge to, and if kept painted the hinges will last as long as the sash.

The duty of opening and closing the air vents in a greenhouse is a labor that must be performed nearly every day for the greater part of the year, and many days more frequent attention is necessary. It is highly important therefore that the ventilators should be so located as to be easy of access, quickly handled and firmly secured when open or shut. Furthermore, for the good of the plants they should be so arranged as to take the overheated and impure air from the house and at the same time exclude as much as possible draughts of air from without. To attain this the sash should be continuous, reaching from end to end of the house, or nearly so, and hinged at the bottom, and they should be operated by an apparatus of some sort that will move the entire line at once. There are many good appliances in the market invented for this purpose, and money invested in the purchase of good ventilating apparatus ensures a dividend that soon covers the outlay.

To secure a uniform movement of the sash so arranged they may be dowelled together near the upper end or be connected in one line by a thin iron plate 3 inches long by 1½ inches wide, screwed across each joint. Continuous sash can not be successfully handled without an apparatus that will move all at once by reason of their liability to swell and stick fast as before referred to.

The great benefit of the continuous sash system is the exclusion of side draughts; wind can not so readily blow into the house. Again a very narrow space, open the whole length of the house, will be sufficient in cool weather, being equal to the full space of two or three scattered sash; but in the narrow vent no wind will enter, and at the same time a uniform ventilation is secured.

On houses running north and south the ventilators should be located on the west side, but if east and west place them on the north side to ward off the cold winds from north and west. If hinged at the bottom two set of sash on opposite sides of the ridge pole can be opened by one line of shafting, but if hinged at the top two complete sets of apparatus is necessary. Continuous sash thus arranged afford as perfect a system of ventilation as is possible to have, for when both sides are open alike side draughts are shut off and the wind blowing over forms a suction to draw the hot air from within. By such an arrangement the sash need not be more than 12 or 18 inches deep, for when open a double space is devoted to ventilation.

In constructing a house of the three-quarter span style it is a good plan to have the short side composed entirely of full length continuous movable sash hinged to the gutter and shutting against the ridge pole. This, operated by an apparatus, makes a cheap and complete construction with a simple system of ventilation.

In constructing a plant house do it with a view to the ultimate attachment of a mechanical appliance of some sort to regulate the ventilation, for no greater time and labor saving institution can be introduced into a greenhouse.

An Introduction.

Probably there are none among those whose portraits we present in this issue with whom readers of the FLORIST have not had business dealings, and in connection therewith considerable correspondence; still probably a comparative few only have been privileged to come into personal contact with them. Hence we believe that an introduction, such as given in this issue, will be a pleasure to a very large number.

Ornamental Trees and Shrubs as Florists' Stock.

At the last meeting of the executive committee of the S. A. F. Mr. J. T. Anthony of Chicago insisted that ornamental trees and shrubs are as much the legitimate stock in trade of the florist as of the nurseryman, and no one denied it.

But as florists on account of their more limited acreage, as a rule, cannot be expected to carry such a heavy stock of trees and shrubs as nurserymen do, they should make amends for this in selectness of variety and perfection of individual. And if their ground is very limited it may be enough that they have simply a few perfect specimens of each sort as samples, something their customer can see growing, and make up his order from. And the florist should make arrangements with some trustworthy nurseryman to supply him with duplicate stock to fill his orders with just in like manner as many seedsmen who do not grow plants, but advertise and sell them, make arrangements with florists to furnish them.

Regarding what a florist can sell, I should say, that one of our heaviest mail men told me the other day, "I can sell anything that I advertise." Another more conservative florist who does a highclass, general local plant trade, told me a little while ago, "I can sell anything I can grow and which is pretty." And this is decidedly a fact. When an amateur gets interested in gardening, or it may be just in fixing up his garden in spring, he wants to get some plants but what to get he really doesn't know. He consults a friend who gives him an object lesson in his garden, or he may wander into the mazes of catalogues and get lost, but the wise man takes a walk or ride out to the florist's. Now if this florist can show him handsome little specimens of retinosporas, Japanese yews, George Peabody arborvitæs, a Douglas fir, a Nordman's fir, a blue spruce all in beautiful form and thrift, the amateur will probably see something among them that suits him exactly and will buy it. He knows it is hardy. And probably he may see a good many other things in the way of climbing vines, deciduous shrubs, hardy perennials, roses or greenhouse plants that he might conclude would look pretty nice in his garden and buy them.

There is no getting over the fact that ornamental trees and shrubs are becoming more and more the imperative decoration of all gardens, large and small, and the gay or bedding plants are simply the trimmings. The perennial beauty and pleasure of the garden depend far more upon the trees and shrubs than upon the transient or one-season stock, hence the arboreal furnishings give the amateur the most concern. His pattern beds or

D. H. ROBERTS.

variety of bedding plants he can change at will to suit his fancy, but he hesitates to interefere with the plants of a lifetime. Now, why can't the florist furnish the trees and shrubs as well as the bedding plants, design their arrangement and plant them too?

Ornamental trees and shrubs should be perfectly hardy, of handsome form and desirable kind, and the shrubs in particular should have beautiful flowers. All trees and shrubs are hardy in some place, but many that are hardy at Washington are quite tender at Minnesota, and the flora of Santa Barbara cannot be duplicated on Long Island. Further, many trees and shrubs may be perfectly hardy in the mixed timber and sheltered parts of the state, which would not exist over winter if planted in the open prairie in the same latitude. We must not be so narrow minded as to insist that any trees or shrubs not iron-clad in Dakota should be excluded from the list of hardy trees, for there is an enormous section of country to cater to outside of the blizzard states.

Every florist should post himself thoroughly on the trees and shrubs that are perfectly hardy in his neighborhood and base his recommendation of hardiness on these living examples. But he must not confine himself to these, his business is progressive, and he must load up with all the desirable trees and shrubs, old and new, that he has good reason to believe may be hardy with him, and be prepared for many losses. This gives him definite experience. He has proven beyond peradventure which are hardy and which are not.

Nurserymen's catalogues every now and again come in for a sound drubbing by some "smart Alick," on the ground that they disseminate false impressions regarding the hardiness of plants, when, most often "Alick" himself is the fool.

If a Georgia nurseryman issues a catalogue of hardy trees and shrubs and I send to him for some pittosporum bushes, tea plants, evergreen magnolias, camellias and Cherokee roses and plant them out here on Long Island and they are all winter-killed, can I blame that nurseryman for leading me astray by his description of these trees as being perfectly hardy? No. If I weren't an ignoramus I'd never expect that because a plant is hardy in Georgia it must necessarily be hardy in New York.

We simply make the assertion that the plants are hardy here with us, in whatever part of the country that may be. But the well posted florist can guess pretty well how far the plant may be trusted as hardy in other sections of the country, and advise in this respect if asked to.

Be very select in your list of trees, excluding all poor or ill-conditioned sorts. Don't let cheapness run away with your good sense. Amateurs in ordering trees from a trade list may be ruled somewhat by prices, but when you show them the sample specimens on your grounds, price will never stand between them and quality. For instance you have a very comely Norway spruce which you want 35c or 50c for, and near by it a blue form of the pungens spruce which you ask $2.50 for, the man who would buy the Norway in preference to the blue spruce, even at the difference in price, would be too mean to deserve a garden.

Every now and again we hear a glorious hurrah about the charming tints of huckleberry foliage in fall, the bewitching beauty of our swamp roses, the tropical luxuriance of our sumachs in summer, and so on, and endure a sneer at our vulgarity in neglecting these our native gems, and betaking to ourselves the coarse hydrangeas and other gay bushes of our gardens. But let them howl, they're not in business and it's recreation for them. The sort of shrubs the people want are those of free, and easy growth, handsome outline, and which bear a profusion of lovely flowers. They want Mezereon, Forsythia, Japan Quince, tree pæonias, deutzias, mock oranges, weigelias, rhododendrons, hydrangeas, magnolias, lilacs, hawthorns, and the like, and if you want to make money in handling shrubs you should restrict yourself to the choicest of this sort of stock.

WM. FALCONER.

New York.

The expected drop on cut flower prices has partially taken place, a little spring-like weather being now only required to complete the job. As it is prices have already declined from 25 to 33 per cent throughout the greater portion of the list. The outside figures on hybrid roses and Beauties of best grade is but $6 per dozen, where one week ago it was $9. Brides, Cusins and other staple roses have dropped to $6 per 100. The most demoralizing feature of the rose, violet and lilac market is the irregularity in prices which always comes as soon as there are indications of permanent overstocking. The holders get panicky and although many roses may be sold at $6 and some violets at $1, yet large quantities of the former are apt to go as low as $3 to $4, and $5 per 1,000 is often the figure on the latter. This demoralization, however, is just what some are always looking for and trying to bring about. Johnnie Weir, for instance, is always on the "bear" side and from the present time throughout the spring looms up as an important factor in the disposition of large lots of flowers. The look of inactivity and resignation which his features have uniformly borne for the past three months is gradually giving way to a smile of satisfaction and he poises his hat with the air of a man who is conscious and confident of his ability to dictate terms although he strives hard to cover up his buoyant feelings with a look of studied unconcern which is delicious to see.

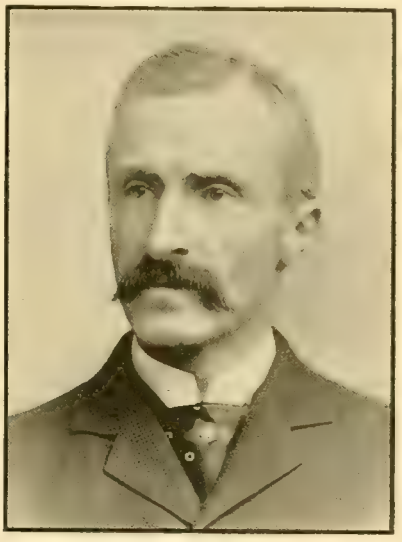
"Well, do you want that stuff put in the wagon, Johnnie?" says the wholesaler. "No, I want a little private conversation first," replies that worthy.

There are a good many inferior hybrids and Beauties coming in at present. The first class specimens generally find a good market, but those of poor quality are difficult to dispose of at any price. Carnations do not as yet suffer any from the incoming of Lent. All varieties are holding well up in price, with white in the lead. The quality of the blooms is falling off, however; the stems are as long as ever, but the flowers are smaller. Bulb stuff has not declined any farther in price for the reason that it has already got about to the bottom of the ladder. Tulips are coming in splendid form now and a fine assortment of colors. Green of all kinds, smilax, adiantums and Asparagus is scarce. Harrisii lilies are too plenty and an unusual occurence is the abundance of cattleya blooms of which there are enough for all demands. Wiegand is sending in quantities of first rate Jacqs. Alex Burns is bringing from his own houses Gontiers which for color, size, solidity and stem cannot be excelled.

One of the finest wedding decorations of recent date was that done by Henry Hession, the Madison avenue florist, for Gen. Dodge on the occasion of his daughter's wedding.

The Florists' Bowling Club meets now every Monday afternoon regularly and some of the members are getting into good practice. The subject for the consideration of the Florists' Club at its next meeting is "How can we as a Club best advance the interests of the Members?" There will be no essayist, but a general discussion. The schedule of premiums for the chrysanthemum show at Madison Square Garden next November is out; $6,500 is appropriated for premiums. Copies of the premium list and rules may be obtained by applying to Wm. Plumb, manager, Madison Square Garden, New York.

There has been a steady stream of visitors to Short Hills this week, the attraction being the annual orchid exhibition of the United States Nurseries. As might be expected, the floral treat was most superb. In addition to this Mr. Manda, as usual, dispensed hospitality with a liberal hand and the numerous visitors from the trade far and near were made specially welcome. The arrangement of the blooming orchids was exceedingly good. The great central show house with its walks winding among stately groups and borders of luxuriant palms, towering tree ferns and tropical foliage made a most effective setting for the orchid display. Hanging from fronds and branches, nestling among the foliage and stems, were cattleyas, odontoglossums, dendrobiums and lycastes by myriads in beautiful array. The Cattleya Trianæ were specially numerous and rich in coloring, many rare forms being seen. There was a good showing of Lycaste Skinneri alba and the pure white Coelogyne cristata and the Dendrobium Wardianums were abundant and showed to fine advantage as they hung from the lofty palms. One of the best groups was a big Alsophila excelsa with Cattleya citrina suspended from the fronds and surrounded by a display of Odontoglossum crispum. Among the odontoglossums was a specimen of O. Ruckeriana with two spikes bearing 48 blooms. One of the most admired plants in the whole exhibition was a well bloomed Angræcum sesquipedale. The cypripediums were shown in a house by themselves. There were 126 varieties in bloom, many of them being rare kinds, and the arrangement was very effective, neat little plants of Araucaria excelsa alternating with the cypripediums throughout the house. The other houses opening out on either side from the main show house were devoted each to some specialty, one being filled with alocasias and nepenthes, another with anthuriums and others with various species of palms, while one house was a gorgeous mass of blooming plants, such as azaleas, genistas, narcissi and lilies.



The cozy theatre of the Eden Musee was turned into a bower of beauty on the occasion of Siebrecht & Wadley's sixth annual orchid show. There was a splendid lot of plants and cut blooms from their own establishment at New Rochelle, besides liberal contributions from W. S. Kimball, Fred'k Goodridge and others. The great central group was a grand collection of tropical plants and orchids exquisitely arranged and the draping of gray Florida moss which hung from the branches overhead added much to the effectiveness. Another beautiful arrangement was the group around one of the big mirrors, composed of tree ferns, Alo-

J. D. CARMODY.

casia macrorhiza and smaller plants so placed as to take full advantage of the reflections in the mirror. The stand of dendrobiums dressed with ferns and selaginellas was also worthy of note. Among the most noticeable plants shown were a fine specimen of Cymbidium Lowianum and a plant of Dendrobium phalænopsis, var. Schroderiana, the latter attracting perhaps as much attention as anything in the show, also a well flowered specimen of the white Cattleya Trianæ, which was contributed by Mr. De Forest. The contribution from W. S. Kimball comprised 56 varieties of cut cypripediums, including such rarities as C. Lathamianum, C. Winneanum and C. Haynoldianum. The grouping of small palms, azaleas, cyclamens, tulips and other decorative plants in the galleries, around the sides and stage and in the corridors and vestibules was very extensive and artistically arranged, although some of the best features suffered from insufficient lighting. Another drawback to a full appreciation of the exhibition was the lack of room, the hall being too small for such a display.

There were many visitors to New York attracted by the occurring of the two exhibitions simultaneously, among them being M. A. Hunt of Terre Haute, Geo. Savage of Rochester and Charlie Knight and Mr. Griffin of Lenox, Mass.

The late Wm. Bennett is well remembered in New York as a gardener of exceptionable ability and his mantle must have descended in full upon his son, A. W. Bennett (or "Gus," as he is known among the boys), who has had charge of the houses of Mr. Wm. Brown at Flatbush for a number of years. That the advantage of a thorough training combined with a natural love for his calling is fully exemplified in this young man's work requires but a visit of inspection. Every foot of space shows evidence of skill in cultivation and taste in arrangement. Every plant is in perfect health and a picture in itself, while for scrupulous neatness and absence of litter or rubbish of any kind these houses cannot be beaten. The little orchid house only 37 feet by 10 is a sight. The phalænopsis are a sheet of bloom, so are the cattleyas. How so many plants were brought into flower at once in such a little spot is a mystery. The stove house also contains many gems. The crotons are unexcelled in color and the dracænas are perfect specimens. One of the most beautiful ferns ever seen is a specimen of Goniophlebium subauriculatum which is set on a stand ten feet high, the fronds hanging in luxuriant profusion to the floor. Many of the fronds are not less that fifteen feet in length and the plant would make a complete wedding canopy just as it is. In the palm house are grand specimens of Cycas circinalis, Cibotium contaminus and plants of like character. The show house is now gay with cinerarias and cyclamens, both of the finest strains. The calceolarias will be ready to take the place of the cinerarias as soon as these are finished. Mr. Bennett has some fine seedling nepenthes and other things on which he has lavished much care and it will doubtless be a severe privation for him to go away and leave them all behind him, but it is understood that he is to make a change shortly. Wherever he goes he will carry with him the respect and esteem of all those with whom he has been associated.

Dailledouze Bros.' houses at Flatbush are looking well and these industrious gentlemen are making extensive preparations for Easter and spring bedding trade. Their carnations have been paying well this year, although more or less infected with the much discussed fungus. Mr. Dailledouze does not worry much about it, however. "That fungus is old as the hills," he says; "it only comes from dampness and cold." Silver Spray is his favorite white variety. Mermets, Brides, Wattevilles, Hoste and Waban are all doing finely.

The old Bennett establishment is not far from here and is run now by Mr. Geo. Bennett. Not much addition has been made to the place since the death of the elder Bennett, but the houses have in some cases been rebuilt and have been kept in good repair. The old camellia house is now devoted to carnations, a glorious bench of Portia occupying the entire space. There is one house of remarkably fine cinerarias, some single blooms of which measure full three inches across. There will be a big stock of hydrangeas here for Easter demands.

The Long Island city florists have suffered heavily through using the new supply of city water during the past season. The water proves to be ruinous to many plants and all the growers have been obliged to give up using it and make arrangements to supply themselves from wells and cisterns. There is some talk among the florists of bringing suits for damages against the city.

Ernst Asmus has gone to Florida, whither he has been ordered by his physician on account of his health.

Chas. Henderson has gone on a similar errand to Viriginia.

Wm. Falconer has been seriously ill for the past two weeks.

The Klunder Company failure proves to be worse than was at first supposed. They owe some very heavy bills and the assets at present seen very elusive.

Benj. Ezickel, the Union Square florist is also in care of the sheriff, and owes quite a number of accounts.

Philadelphia.

The March Meeting of the Florists' Club was well attended despite the disagreeable weather. The proceedings were very interesting almost all of those present taking part. A vase of fine flowers of Mr. Dreer's new daisy "Snow Crest" was much admired. Mr. Craig not being able to be present Mr. Ball occupied the chair.

Mr. Westcott, as chairman of club house committee, made his report for the past three months. The club room is more than paying expenses, the income increasing every month, although the price of bowling has been reduced. Mr. Westcott also, as superintendent of the exhibition of the Hort. Society, asked the club to turn in and decorate the hall for the spring show, commencing March 29th. This was agreed to and the entire club will turn in and do their best to make the surroundings beautiful. A very important matter and one that will be of interest to quite a number of members, is an amendment to the bylaws prohibiting smoking during the meetings of the club. One of the sections allows this, but it will now be speedily done away with, as even old smokers say they are glad of it, and the motion to amend passed without a dissenting vote.

The following gentlemen were elected to membership: S. S. Pennock, Henry A. Bower, Otto Thedston, M. C. Cheney, F. D. Cheney and Thos. B. Meehan.

Two silver cups were on exhibition, one worth fifty dollars, a handsome cup offered by Robert Craig for 12 best blooms of a carnation not yet in commerce, to be competed for at the spring show, March 29, of the Penna. Hort. Society. This is certainly a very handsome prize and we believe the finest ever offered for 12 carnation flowers.

The other is a very fine solid silver cup worth 100 dollars, given by Mr. James Simpson of Philadelphia, a gentleman whose love of flowers has led him to offer this elegant cup. It is for the best plant of Chrysanthemum Mrs. M. Simpson, a fine early yellow Japanese, with very large incurved flowers. It was raised by Robt. Craig and named for Mr. Simpson's mother. As a matter of course all the growers in this neighborhood have a plant or two of this variety which is being guarded with great care. This competition is sure to be a leading feature of the show next fall.

The periodicals on the library table have all been placed in neat binders with the name of the paper in gilt letters across the back. The committee, of which Mr. Geo. Watson is chairman, certainly deserves a great deal of credit for the very careful manner in which every thing is arranged. Our genial Dan, the librarian, has become so familiar with the books that he can place his hand on any volume wanted at a moment's notice.

Business the past week has not been so bad for the first of the dull season. Fortunately the most of the hybrid men managed to get through with their early crops in time, as such a supply as there was just before Lent would hardly sell now.

Prices have fallen some. Gontiers, Perles and Sunsets, sell for $5; Brides and Mermets 8 to 10, Cusins and La France 6 to 8, Hybrids and Beauties 25 to 50. The best carnations still bring $2.50. Violets are getting smaller and bring $1 a hundred, tulips and daffodils 4 to 5.

There are three fine pink carnations to be offered to the public in a short time. One will be sent out by Mr. Colflesh. This is a very fine bright pink, good bloomer with strong stems and large flower; Mr. Lonsdale's Grace Battles, described before, and growing in favor with everyone who sees it; and Edna Craig, a beautiful light pink; at Craig's they think this is the best pink yet and as it is growing there, it certainly is very fine, having all the requisites of the perfect carnation; the color is the ideal light pink, the flower large with heavy stem, does not burst and free in bloom.

Some time ago Mr. Westcott held the opinion that carnations could not be grown in Philadelphia as well as in the carnation belt in Chester County; for said he "they have such pure air, and that accounts for their success." Well there must be a little fresh air about here, for Mr. Craig's carnation house is pronounced a wonder by all who see it. By the way, the folks up in the girdle say it is not spots of rust that has tarnished the belt, for there isn't a particle of rust about, except possibly a little on the nails in the benches, and that in a very short time they expect to have everything as fresh and vigorous as before.

The store occupied by La Roche & Stahl, at 13th & Chestnut, considered by many to be the best business stand in the city, has been purchased by Boothby the large restaurateur who occupies the adjoining building. They will now have to seek other quarters, but that they can carry their business with them we have no doubt as Wm. Stahl, who is a great worker, is always on deck and this means success in any business.

JOHN A. SCOLLAY.

J. G. SCOLLAY.

C. H. JOOSTEN.

In the bowling tournament McLean is now 117 pins ahead of all competitors and likely to win handily. In the second class it is Campbell and Nesbit and in the third, Fancourt and Knapp are first and second. Anderson wound up an evening recently with a score of 232 and many high scores are made in the practice games.

Mr. Price not being present his paper on growing hybrids will be read at the May meeting. Mr. Thos. Cartledge was appointed to read a paper on decorative plants and floral decorations at next meeting.

The club will hold its annual banquet on the second night of the spring show. This will no doubt be a fine affair.

Boston.

Cut flower trade has been dull all around for several days. Prices are on the downward scale—even carnations are beginning to weaken. There is some very fine erica being received now and it is extensively used here in all kinds of work. There are fine plants of it in all the florists' windows. Azaleas, spireas and cinerarias are also quite abundant.

Much enthusiasm has been excited in the Bowling Club by the generous action of Mr. C. V. Whitten in placing his splendid private alleys at the disposal of the club. The first practice meeting at these alleys was held on March 5, about 18 or 20 members attending. With characteristic hospitality Lawrence Cotter, who has charge of Mr. Whitten's rose houses, acted the part of host and the boys were not allowed to go away either hungry or thirsty.

Mr. James Doogue, brother of City Forester Doogue, was run over and instantly killed by a dump cart on Boston Common, where he was superintending the dumping of some snow from the neighboring streets. The wheel passed directly over his neck. Mr. Doogue has held the position of assistant superintendent of the Common for some years, having been formerly connected with the gardening and florist business. He was widely known among the florists and highly respected.

Two beautiful solid silver cups costing $100 and $50 respectively are offered by Waban Rose Conservatories for the best Waban roses to be shown at the spring exhibition of the Mass. Horticultural Society.

Col. H. H. Wilson gave an interesting lecture before the Mass. Horticultural Society on Saturday, March 5, his subject being "Some Consideration of the Effects of Heat."

UTICA, N. Y.—The monthly meeting of the Florists' Club was held March 2, Pres. Aucock presiding. The reports of the secretary and treasurer were presented and accepted. Peter Crowe explained his method of growing violets, and was given a vote of thanks therefor. C. F. Baker read an instructive paper on "Looking Ahead," and a vote of thanks was tendered him. The old officers were re-elected as follows: Jonathan Aucock, President; C. F. Seitzer, Vice-President; J. C. Spencer, Secretary; C. F. Baker, Treasurer. In the question-box were these questions, and they were discussed at some length: Which is the most economical, hot water or steam heat? The opinion seemed to be that for large houses steam was most economical. What is the best paying rose to grow in this locality? Nearly all answered "Niphetos." The matter of holding a flower show next fall was discussed, and E. J. Spencer, Frank Baker and J. C. Spencer were appointed a committee to work up interest in the matter by next meeting, which will be held April 6.

(Wood Bros.)

WICHITA, KANS.—Rose & Mueller have dissolved partnership by mutual consent. Mr. C. A. Rose retains the store at 404 N. Water street and Mr. Chas. P. Mueller the greenhouses at Fairmount. W. H. Culp & Co. have rebuilt their greenhouse and now have a very fine place. They have a M. Niel rose from which they have cut some 500 good buds this season. Stinebuchel had the misfortune to have all his plants frozen.

THE Pennsylvania Hort. Society has issued its programme for 1892. The spring show will be held March 29 to April 1 and the chrysanthemum show November 7 to 11. The premiums for each exhibition are very liberal. Copies of the programme may be had on application to the secretary, D. D. L. Farson, Horticultural Hall, Broad street, Philadelphia, Pa.

THE California State Floral Society has issued a premium list for its seventh semi-annual flower show, to be held in San Francisco May 11 to 14. Copies of the list may be had on application to Mr. W. H. Smyth, 226 Market St., San Francisco.

SPECIMEN flowers from a seedling of Silver Spray carnation have been sent us by Mr. John Schafmeister, Harrisburg, Pa. But the blooms were received in such bad condition that we could not pass opinion upon them.

DENVER, COLO.—August Schenkel has again taken charge of his greenhouses, which he had rented to Mr. Scheffel. His present address is Highlands, as he now has no Denver office.

SOME cyclamen plants and flowers are sent us by Mr. R. Lauterbach, Valley Forge, Pa. They were of very good quality, the colors of some of the flowers being extra good.

MILWAUKEE.—Geo. Volk, formerly with Crosby & Jones, opened a store and conservatory at 228 Wisconsin street, near the North-Western R. R. depot March 3.

PROVIDENCE.—The R. I. Hort. Society will have a banquet March 9. The spring exhibition of roses, azaleas, carnations, etc. will be held March 15.

WE HAVE RECEIVED from Mr. W. Dean, Birmingham, England, the honorary secretary of the Midland Carnation and Picotee Society, a copy of the schedule of prizes for its annual exhibition which will be held at Birmingham August 6, 1892. The classification is as to color and other specified characteristics instead of named varieties with but few exceptions. The total value of the prizes, medals, etc., is about $500, and special certificates will be awarded to new varieties of merit.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED By a young man 20 years old, has been in the business 7 years, can make wire designs and do cut flower work. Address H F S, 1027 E Market St, Louisville, Ky.

SITUATION WANTED—Young man would like position by March 25th; have had 5 years experience at roses, carnations and mushrooms; good reference. Address J J M, Oak Lane, Phila Co, Pa.

SITUATION WANTED—By gardener, married, no family; understand fruit, flowers and vegetables and general care of a gentleman's place. Age 35 Address J T, Piermont, Rockland Co., N. Y

SITUATION WANTED—By a florist and gardener; German; age 32; small family; strictly temperate; 19 years in the business. First class reference. Either private or commercial Address FLORIST, East Moriches, L. I., N. Y.

SITUATION WANTED—By competent plant and cut flower grower; age 27; has thorough commercial experience; wages not less than $12 a week. Best of references. Address H, 829 Pavonia avenue, Jersey City Heights, N. J.

SITUATION WANTED—By a thorough, practical florist and gardener, fully competent to take charge of a first-class private or commercial place. Roses carnations and violets a specialty. Address W H, care News Co.'s Store, Elizabeth, N. J.

SITUATION WANTED—By a sober, reliable florist; 10 years experience in Europe and United States. Competent to take full charge of greenhouses. Age 25; speaks English. Good references Address GODFREY, 29 Horton S., Dayton, O.

SITUATION WANTED—By gardener, 24, good references, who is able to take good care of gentleman's place or willing to work as second gardener on a big private place. Prefer city or state of New York. GARDENER, Rector St. 19, New York.

SITUATION WANTED—Young man 25 years old in cut flower store; a good maker-up in every branch of cut flowers; 10 years experience in first class establishment; not afraid of work; first class references. Address J L care Robt C. aig, 49th and Market Sts., Philadelphia.

SITUATION WANTED—As manager or foreman in a large commercial place; thoroughly understands the forcing of roses, carnations bulbs, etc, also the growing of all kinds of decorative, tropical and bedding plants; has lived in some of the leading places in England; five years in this country and Canada; wages $75 to $80 per month; good testimonials. D P. NELSON, Vineville, Macon, Ga.

SITUATION WANTED—As manager or foreman in large commercial or private place by married German; 30 years old, one child; who held similar position for a number of years in some of the leading commercial places around New York; well up in growing roses, carnations, violets, smilax and bulbous stuff; rose growing establishment preferred; 15 years in the business; good references. Address, stating wages. B E, care Louis Blendermann, 143 East 59th street, New York.

WANTED—Stock plants of chrysanthemums; 50 Gloriosum, 50 Elaine. A. J. VREELAND, 200 Westside avenue, Jersey City, N. J.

WANTED TO RENT—Greenhouses, dwelling and some land near market Address WISE, Mt Prospect Ave., Newark, N. J.

WANTED—A single man to take care of ferns, palms, etc. Address with salary and references, O. P. BASSETT, Hinsdale, Ill.

WANTED—Florist for all kinds of greenhouse work; married man preferred; wages $40 per month. W. W. GREEN & SON, Watertown, N. Y.

WANTED—A good, reliable man for general greenhouse work Give references and state wages expected. I. N. KRAMER & SON, Cedar Rapids, Ia.

WANTED—A young German gardener who understands his business, to keep up a country place and to take care of horses and milking. Address R. H. SANBORN, Geneva, Ill.

WANTED—A first-class gardener to take care of a small greenhouse and grounds. Will furnish cottage for a married man Address F. M. HUBBELL, Des Moines, Iowa.

WANTED TO RENT—With privilege of purchase, a greenhouse establishment, near Boston. Southern roads prefered. Address LOTHROP WIGHT, Framingham, Mass.

WANTED—Competent man to take charge of cut flower and plant departments in commercial greenhouses; must be a good rose grower; state wages. THOS. T. HOLTON, Morristown, N. J.

FOR SALE.

Nine Green Houses containing about 10,000 feet of glass, stocked with carnations and heated by steam. Also grapery 80 feet long, recently built; about 30 acres of choice land, abundance of fruit of all kinds, large commodious house containing 15 rooms, including bath room, a new barn and necessary out-buildings, within 5 miles of Philadelphia and one mile from station. Will be sold on account of ill-health. Address I. LARKIN, Toughkenamon, Chester Co., Pa.

FLORISTS' ATTENTION.

FOR SALE.

The most desirable greenhouses in the vicinity of Chicago, with every facility for doing business 3 400 lineal feet of greenhouses bedded with plants, fitted with heating pipes, boilers, etc., windmill and tank, with pump from river; well drained, 40 feet above lake 11½ acres of ground with dwelling house, barns, tools, wagons, carts, harnesses, horses—in short, everything to continue a large and growing business. 3½ acres of fine shrubbery, apple and pear trees. Only 8 miles from Chicago City Hall. Will be sold cheap Will make the purchaser a fortune in the natural advance of Chicago property. In the meantime a business paying $8 000 profit annually can be continued. Address M E, care American Florist.

FOR SALE.

Nine Green houses and seven hotbed frames, 12 000 square feet glass with circa two acres of land and stock for sale very cheap, and on easy terms.

The houses are in splendid conditions situated in one of New England's best localities, with a large and extra good home market and established trade.

The stock represent a wholesale value of over $5,000, in good and saleable condition for spring trade. New steam boiler with 3 000 feet of pipe, cost about $1,250; 20,000 pots all sizes; tools and implements.

The price on property, land, houses with stock, heating apparatus etc, is $6,500, largest part of which can stay in the property. It is a splendid opportunity for one wishing to buy an established business, as the property is in first class condition, ready for the coming season. For further particulars write to

H. C. HENKING, Springfield, Mass.

1301 AND 1303 MARKET ST., PHILADELPHIA, PA.
WAREHOUSE: 246 N. BROAD ST.,

Telephone No. 1298. REGISTERED CABLE ADDRESS: De FOREST, PHILADELPHIA.

Chicago.

The first half of the busy season is over and things will be quiet for a few weeks. Last Wednesday ushered in the Lenten season; only a week and what a change in the market! Flowers are plenty enough now and prices have taken a tumble.

The weather is still bad, but the few days of bright sunshine we had has made a wonderful difference in the cut of roses. The quality also is fast improving. Jacks are coming in at last in liberal quantity, of fairly good size and quality. Hybrids are rather slow yet. A few Anna de Diesbach, Paul Neyron, and here and there a Brunner, comprise the list.

Violets threaten to become a glut. This stock is very fine at present; the demand for this favorite flower is still heavy but the cut is so large that it is difficult to dispose of the whole. In consequence the price has dropped considerable. The finest stock can be bought for $1 and very fine quality at from 50 to 75 cents.

Callas are overstocked and often sold at a sacrifice. Harrisiis are holding their own this season. With a liberal cut every flower was marketed at a good price. Last year at this season you could hardly give them away. We hope to see no such glut again, but Easter is very late this year and a number of batches which are intended for Easter trade will surely come in several weeks too soon.

Carnations come in finer than ever but more or less stock is accumulating in the commission men's hands and prices are coming down. The average price for long stemmed flowers is $1.50 and for extra choice lots from $1.75 to $2.

DO YOU WANT HARDY PLANTS?

IF SO, GO TO

THOMAS S. WARE

FOR THEM.

He is recognized all over the World as having the

Largest and Most Complete Collection on Earth.

The large families are grown by the acre, and the annual output is simply enormous. Among the great specialties are

CLEMATIS,

thousands of which are annually sent to America. The collection is unique, and the quantity grown immense. To meet the enormous demands has necessitated a great increase in my producing powers, not only in quantities, but in particular to enable me to furnish **stronger tops.**

BEGONIAS.

The sales this season of the Begonia tubers and seed, both double and single have far exceeded my expectations, and at the present moment the stock is exhausted of many of the sections. The machinery for next season's output has been enlarged, and I hope then to have not only the **largest stock, but the finest collection ever seen.**

OF PYRETHRUMS

From present appearances I expect to have for fall delivery about **40.000 Clumps,** including all the very best varieties in cultivation, all strong clumps from ground—not small plants in pots.

NARCISSUS.

Of the popular market varieties such as **Von Sion, Obvallaris, Stella, Princeps, Major, Maximus,** and others, I have the

LARGEST STOCK IN EUROPE.

All grown expressly for forcing. The old **Von Sion** is an extra fine stock, as many of my American friends know. My general collection is also very fine and contains all the very best of every section, all of which are described in my Bulb Catalogue, Part II, copies of which may be had upon request per postal card.

PÆONIAS.

A great specialty; **Singles,** a fine collection; **Doubles,** every variety worth growing, and **Tree Pæonies,** the best of the Japanese and French raisers; the common varieties, such as the **Double Crimson, Double Rose, Double White** I grow in very heavy lots, and at all times shall be pleased to make special quotations.

HARDY PERENNIALS.

My collection is admittedly the most comprehensive and useful collection known. Every hardy plant worth growing will be found in one or the other of my numerous catalogues. To give some idea of the extent of my collection I may mention that the details take up the space of

Twelve Catalogues Annually Published,

all illustrated, full of information, and which together will be found a splendid guide to Hardy Plants.

ALL CATALOGUES FREE ON APPLICATION.

JOHN J. CONNELLY, BRYN MAWR, PA.

Pennsylvania Items.

Robt Craig, W. K. Harris and, E. V. Hallock, while on a visit to West Grove, Pa., were delightfully entertained by A. F. Conard, G. H. Leahey and Antoine Wintzer at the West Grove Hotel (Temperence house of course).

They found "The Rose" establishment running full blast, plants looking clean, thrifty and growing like fun, free from all those diseases so common to the rose and so ably discussed by most growers. They are roses first, last and all the time apparently; still shrubs cut quite a figure. They are propagating Viburnum plicatum successfully. Any one who has tried to grow this will know what that means.

Calls were made on several carnation growers between Philadelphia and West Grove, the presence of Mr. Craig proving an "Open Sesame" everywhere. Many carnations are acting badly even with the best growers this year. Some have been swept clean, while others are slow to produce flowers, and plants look bad. Plants in the carnation belt are no exception to those grown in the old carnation districts. And Robt. Craig has as fine a house of them as I ever saw, healthy and flowers thick as clover heads.

Robert imports no more palms, he has paid his money, "learned the trick" and will grow them himself in future. He has a fine house of araucarias and showed me how much superior plants grown from cuttings were, over those grown from seed. The former are beautifully furnished down to the pot, while the seedlings are very weak in this respect for some inches up.

We called on Mr. Maule. He is much interested, and is working like a Practical Farmer to increase the circulation and improve his paper. It ought to be a good advertising medium.

A calm quiet has evidently taken possesion of Mr. Burpee which presages the important event. A visit to his seed store discloses the vigor of his touch, and the smoothness of a well organized business. We all wish him well. H.

New, Rare and Beautiful Plants, ORCHIDS, ETC.

Mention American Florist.

Toronto.

Several more valuable prizes have been lately offered for competition at the coming chrysanthemum show, amongst the number another silver medal (which makes two), a silver cup and various money prizes. The cup is given by Mr. J. A. Simmers, seedsman, a money prize from The Steele Bros. Co. and the rest from private gentlemen interested in the success of the show and in horticulture generally. This news will no doubt make the boys hustle. The prospects at present are good for the "best show on record" in this locality, I may say in this dominion, and I think I might say even on this continent as regards quality.

The customs department has been up to its tricks again. The writer was mulcted to the extent of 11 cents on P. Henderson's catalogue and 6 cents on Vaughan's. These and other petty annoyances of a like nature at the hands of a paternal (?) government have had the effect of making at least one ardent convert to the principles of free trade. The strange part of this catalogue business is that some are delivered by the letter carriers without going through the custom house at all whilst others are detained, but as far as I can see there seems to be no discrimination, it appears to be a "happy go lucky" way of doing business, and it just depends upon what clerk happens to handle the packages when received and whether it is near meal times, whether he chucks them into the custom house or to the letter carriers.

Lent is upon us and figuratively speaking the righteous have clothed themselves in sack-cloth and ashes and put peas (boiled) in their boots. However the various florists' stores look temptingly gay and though trade may have fallen off some there is still enough doing to make the day's sales pay for "three meals and a nightcap." E.

SAMPLES of the invisible bouquet pin have been sent us by Mr. G. B. Willcox, Bay City, Mich. They seem admirably adapted to the purpose for which they are intended.

L. FAWCETT, Carnationist, SALEM, OHIO.

CARNATIONS.

Rooted Cuttings of the three leaders in the Boston market, TIDAL WAVE, SILVER SPRAY and PORTIA; extra fine stock at lowest prices.

H. L. CAMERON, No. Cambridge, Mass.

New Double White Daisy Snow Crest.

A most distinct variety and an improvement on all existing sorts. Its habit of growth and size of flowers, in comparison with older varieties, is gigantic. The flowers, which are borne on stout, stiff stems from 6 to 10 inches long, are of the purest white and full to the center. When fully developed they rise to a conical or sugar-loaf form, and well grown specimens will cover a silver dollar.

It makes an admirable hardy garden plant or may be forced for cut flowers under the same treatment as violets. $2 per doz.; $15 per 100.

Dreer's Quarterly Wholesale List now ready; mailed free to the trade on receipt of business card.

S. J. REUTER,
WESTERLY, RHODE ISLAND.

Baltimore.

Lent is here and sackcloth and ashes, fasting and devotion, church going and meditation are popularly supposed to be prevalent; but the scribe has observed no falling off in the attendance at the high priced restaurant where he and others of his trade occasionally lunch. The sackcloth looks most remarkably like silk and ashes are scarce unless made from cigars. The church going does not glut the pews and to judge from the card parties, private theatricals, fox hunting meets and little entertainments for sweet charity's sake, meditation is about as usual.

There are private dinner parties—very private for fear of talk; promenade parties, which take the air on Charles street when the weather is fine; and even church parties composed of young ladies who attend Lenten services in gala dress and are afterwards joined by their gentlemen friends with violets in their buttonholes and silver mounted canes in their gloved hands.

All this calls for flowers, and as many growers time their stuff to come any time but in Lent there is good demand for all that is offered this week at the same prices as prevailed last week.

Owing to the cloudy, cool weather violets have gone off a little in quality and quantity and yellow buds are quite scarce, so is smilax, but otherwise the supply is fairly up to the demand. Of course there will be few big decorations for the next 30 days and the people who mostly get them up will feel the loss, but those who depend on funeral work will see no difference in the trade, and those who depend on a host of small orders will see but little. In short Lent is shorn of half its terrors to the florist here, for this is a fairly moral town at all times and doesn't have to go into spasms of repentance one month for the exceeding wickedness of the other eleven as some places do. MACK.

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following. Speak quick if you want them:

		Per 100
450	Dracæna Australis, 18 to 24 in. high	$20 00
325	" " 6 to 8 in. pots, 2 to 3½ feet high	50 00
1300	Dahlias, best vars., ground roots	8 00
	" " " single roots	3 00
900	Cannas, Crozy's Hybrids	5 00
5800	Tuberous Begonias from the finest collections on the Continent of Europe this lot gave us flowers 4 in. in diam. when growing in 2 in. pots last fall	8 00
200	Hibiscus Grandiflora, the best for florists' use, 3 inch	4 00
200	Hibiscus Grandiflora, the best for florists' use, 4 and 5 inch	8 00
3500	Ivy, English, 2 to 4 feet high	8 00
	Clematis, strong imported stock, pot grown, 8 in. pots; can now be shaken out and packed light	60 00
2200	Vincas, variegated, fine plants	8 00
2000	Echeveria Rosea, 2 to 4 in. in diam.	4 00
1000	Calceolaria, from a celebrated European grower. There was nothing on our place that attracted so much attention as did those last season; they sell at sight	6 00
7000	Hollyhocks, this lot embraces three of the finest European collections, separate colors	4 00
1000	Genista Pubescens, long graceful racemes of golden yellow pea shaped flowers, can be had in bloom Jan. 1, or can be retarded till Easter, invaluable as a pot plant or for cutting, fine plants	10 00
200	Crotons, stock plants, 8 inch, fine bushes, best kinds; a grand opportunity for any one to get up a stock of this rising race of plants, $2 each.	
1500	Pelargoniums, best varieties, 4, 5 and 6 in., fine bushy plants, 3 sizes assrt	12 00
1000	Hydrangea Otaksa, 6 inch stock	20 00
8000	Roses. We have a lot of mixed stock in 3 and 4-inch pots wintered in cold frames and in splendid condition for a shift, the stock is well ripened; the varieties in about equal proportions are La France, Hermosa, Duchess de Brabant, Marie Guillot, Malmaison, Gen. Jacq, Agrippina, Mrs. Jno. Laing, Ulrich Brunner, etc.; price if ordered before March 15	5 00
	American Beauty, splendid stock, clean and thrifty, 2½ inch pots	8 00
300	Phœnix Rupicola, 2½ to 3 feet high	75 00
1000	" " 1 foot high	30 00
750	Pandanus Utilis, 2 to 2½ feet high	75 00
100	Dracæna Fragrans, 7 inch	50 00

NOTE.—This stock is being rapidly depleted; if you see anything that you need hustle your order in or get left. April 1st we commence overhauling and rebuilding the houses in which most of this stock is growing in order to prepare them for other purposes, hence prices are a secondary consideration.

Our establishment, covering an area of 70,000 square feet of glass, is located in the heart of the city, where land is much too valuable for greenhouse purposes, and as we wish to devote more space to the cut flower business we are compelled to drop the plant trade for the present.

JOHN IRVINE CO.,
BAY CITY, MICH.

See here! the first order that reaches us for $5 worth or more of the above stock accompanied by the cash or satisfactory reference takes 100 Tuberous Begonias free. NEXT.

St. Louis.

The florists report a good trade for the past week. Lent is having its depressing influence, but in general there is no cause for complaint. Funeral and other set work is plenty and runs mostly in small pieces.

We have at last had a few days of sunshine, but to-day, Saturday, brings cloudy weather, and rain again. Roses are a little more plentiful than they have been recently, but still the wholesale men say they can't get half enough to fill their orders. It is said that the firm of W. A. Hanft & Co., has left the wholesale business to engage in retailing.

Mr. Waldbart is making arrangements to have his largest house lighted by electricity. Mr. Armstrong is sending in some fine lily of the valley.

The Ayers Floral Co., the newly established firm at 3026 Easton Avenue has a model store. A commodious, well lighted, neat and scrupulously clean room, with every modern convenience, and a good in show the window, do much to increase the business of this wide awake firm.

Mr. Armsby, head gardener to Mr. Kauffman, has a few nice orchids now in bloom, among them being fine specimens Cattleya Trianæ, Dendrobium Wardianum, Saccolabium giganteum (Synonym: Vanda densiflora,) and Oncidium Cavendishianum. A large plant of Cycas revoluta is fruiting thereby making itself very interesting. Here can also be found some fine specimen palms, among them being one of Caryota urens, also one of Hydriastele Wendlandiana (Kentia Wendlandiana). J. W. D.

Pittsburgh.

Business has been very good the last few weeks. The growers are sending in good stuff, but not near enough to supply the demand. Carnations and roses are coming in in fine shape. Ed. Thiel, formerly with W. C. Beckert, is making arrangements to open a new store shortly, for the sale of cut flowers, on Federal street, Allegheny. T. F. Beckert will remove after the spring sales to Neville Island and put up a new range of houses, about 15,000 feet of glass, devoted entirely to growing cut flowers. The Florists' and Gardeners' Club at its last meeting decided to engage the same building, the Auditorium, for the chrysanthemum show to be held the second week in November. The premium list will be increased and cash prizes to the amount of about $1,000 will be offered by the club, also special prizes later on. The premium list will be ready in a few weeks and mailed to parties desiring the same by addressing the secretary of the club, Mr. G. Oesterle. E. C. R.

GEO. W. CHILDS,

THE JACQUEMINOT CRIMSON CHRYSANTHEMUM

We desire to impress upon lovers of chrysanthemums, that this variety is without question the most perfectly formed reflexed crimson variety ever offered; and, like the great and good man it is named after, it will be as much admired and talked about. The flowers are of the largest size. The habit and growth is perfect. It has been tested two seasons and is thoroughly established. It was awarded the Pitcher Gold Medal at Orange, 1890, and a Silver Medal at Philadelphia, 1890.

SINGLE PLANT, $1,00; 6 PLANTS, $5.00; 25 PLANTS, $20.00.

Stock limited. Orders filled strictly in rotation. Plants shipped after March 1st.

OUR SET OF 10 NEW VARIETIES—SEE RETAIL CATALOGUE FOR DESCRIPTIONS. PRICE, $7.50.
SET OF 9 PEDIGREE EARLY VARIETIES—SEE CATALOGUE FOR DESCRIPTIONS. PRICE, $3.00. Plants ready March 1st.

More Good News Wanted.

So many of our craft are contributing suggestions for others to reflect upon, that I thought I might too, say a little, that would perhaps benefit some one. On page 480 of January 14th. issue in Mr. Wm. Falconer's article, "Good News," I find this phrase: "It is generally expected that a florist from the very nature of his calling, is a person of refined taste and neatness; do dirty pots substantiate this opinion." I say no, and so does everybody. But there is one other bugbear in the florist business, that appeals more to the sensitive feelings of every refined and just person than a few dirty pots, and that is an individual, an ignorant, brutal and profane foreman. He is a living evidence to the contrary that association with plants and flowers refines anybody. This brute in his ignorant conceit, abuses what little authority is vested in him and soon begins to make life miserable for those who are so unfortunate as to be compelled to work under him. Here is where the employer should interpose, and prove at least to the boys, that he has been touched with the refining influences of floriculture and give this brute a set-back, and demand of him courteous treatment of all hands. I can't understand how any employer can tolerate such injustice and cruelty. In all greenhouses we find boys of good families who are well bred and sensitive and it is not only painful, but galling to see such in charge of a raw, ignorant, howling brute. Every employer should deem it his duty to see that his employes are treated humanely. There are plenty of foremen to be had, who know how to treat the boys under their charge, so there is no excuse for not classing the brute with the dirty pots and fire them both.

I might make another little suggestion. We have florists' clubs; a chrysanthemum club; carnation club; a bowling club; now let us have a florists' humane club, and get these brutes out of the profession.

A FOREMAN.

Mention American Florist.

ALTERNANTHERA ROSEA NANA.

When we introduced **ALTERNANTHERA AUREA NANA** we described it as the best dwarf yellow foliaged plant ever introduced. To-day it is grown all over the civilized world, and all admit its superiority and value. It is with the greatest pleasure that we call your attention to another variety of equal worth, and one that will be as extensively grown and as highly appreciated.

ROSEA NANA is of dense compact growth so regular that it rarely requires clipping. In color it is entirely distinct from all others, being bright deep Pink or Rose. A clear and beautiful color making an elegant and effective contrast with Aurea Nana and Paronychioides Major and with the Echeverias.

The young foliage takes on this color very early in the season and maintains it until destroyed by frost. We assure you this is a most valuable plant and every grower of bedding plants, superintendents of parks and cemeteries will require thousands of them for next spring's planting. We have an immense stock of strong plants ready to propagate from at once. Price, $1.50 per doz.; $10 00 per 100; $90.00 per 1,000.

Sample plant mailed for 25 cents.

Floral Decoration.

Florist Grove P. Rawson of Elmira, N. Y., recently gave a reception at his residence at which the floral decorations were unusually elaborate. A local paper says:

"The floral decorations were the finest ever seen in Elmira. On entering the spacious hall the floral and plant decorations at once arrested attention and commanded admiration. One entire side was a huge bank of palms extending from the floor to the ceiling, also a mirror flanked with pink and white primroses. The newel post was surmounted by a perfect specimen of Areca lutescens in a tall Japanese vase, and garlanded with smilax and Papa Gontier roses. The decorations of the front parlors and library were specimen palms placed in vases, antique jars and majolica ware, giving just enough "tone" to the blue and terra cotta draperies, carpets and furnishings. The back parlor, a room of unusual size, afforded ample scope for elaborate decoration. A large mantel arranged with golden flowers and foliage was a glorious mass of genista, daffodils and tulips graded from floor to ceiling. Another side of the room, in connection with a mirror and a background of palms, was massed with LaFrance roses, and wonderfully fine roses they were, eliciting enthusiastic admiration from all beholders. The octogon-shaped dining room, with its dainty luncheon tables graced with bowls of sweet English violets, to the side-board filled in with maiden-hair fern, bright foliage plants and scarlet tulips, was all that could be desired in the way of artistic effect. The lounging room, contiguous to the dancing pavilion, was prettily decorated in Florida palm leaves secured for the occasion, and garlands of manettia vine, with its scarlet and yellow bloom. The center of attraction, however, was the improvised room for dancing, nearly sixty by twenty, crashed and elegantly adapted for the occasion. The high ceiling beginning from the center, from which was suspended a huge bell of crimson immortelles and carnations, was decorated with wreaths and festoons of laurel. The side walls were covered with blue and yellow drapery arranged with natural and bronzed palm leaves and plumes. The largest wall space was filled in with a handsome placque of crimson immortelles, carnations and smilax. In an alcove tall palms and other greens screened the orchestra, and at the same time added materially to the other decorations, superb in quality and graceful in general effect."

MR. JAMES SEMPLE, Bellevue, Pa.:

I consider your Asters "Mary Semple" and "Semple's White" the finest strain without exception, that I ever saw. Yours truly, N. PATTERSON.

Allegheny, Pa., Jan. 30, 1892.

MR. JAMES SEMPLE, Bellevue, Pa.:

We can tell every florist in the country it is the best Aster in cut flowers for florists' use; has long stems and in good colors. LUDWIG & RICHTER.

Allegheny, Feb. 1, '92.

After years of careful selection of the most perfect flowers of Asters saved for seed, Mr. J. Semple has brought this fine strain of Asters up to perfection. The fine perfect flowers, long stems and delicate colors make this a perfect gem of Asters. As I have seen them growing in the field must pronounce them the finest sight that ever came to my notice of Asters. WALTER HARVEY, Florist.

"Decidedly the best Aster we have seen." AM. FLORIST, Sept. 24, '91, page 141.

THE NEW

DOUBLE WHITE DAISY SNOWFLAKE.

The flowers of which are borne on stout, stiff and long stems, and when well grown measure from one to one and a half inches in diameter, are of the purest white and an unexcelled keeper as a cut flower. I force them for cut-flowers for the Chicago market in my violet houses. Big clumps with buds and flowers $3.00 per dozen for propagating.

Mention American Florist.

"Chrysms."

"Mums", "Chrysms", "Chrysanths", "Chrysantums." Why not fall back upon the abbreviation our grandmothers adopted—the last in the above list? The first is vulgar and slangy, the second requires two long drawn out syllables to pronounce and is not over euphonious; the third is subject to the same objections with some others added. While the fourth may be said to have slightly the features of the first, i. e., slangy, still it is a decided abbreviation, it is plain, simple and euphonious, when pronounced as the old folks did—Cre-zan-thums, or Cre-zan-tums. S. CAREW.

St. Louis.

My grandfather's abbreviation of chrysanthemum was cr-an-tum.

Trenton, N. J. JAMES MACPHERSON.

Decorative Plants.

At our last exhibition there was a difference of opinion as to the exact meaning of the term "decorative plants." One exhibitor had in his collection a number of begonias. He held that they were "Decorative plants," while a competitor claimed they were not. Which was correct? H. G. G.

[The term is a rather indefinite one. All florists' plants are decorative—or should be. The phrase as generally used refers to such plants as palms, ferns, crotons, draccenas, etc. But a more definite term, and one frequently used of late, is "Palms, ferns and like decorative plants." —ED.]

A FEW POINTS
ABOUT OUR NEW DIRECTORY.

POINT 1.—The new book will contain an accurate list of those in the trade on the Continent of North America, January 1, 1892.

POINT 2.—In addition to the above it will contain the statistics of the Florist, Nursery and Seed Trades from the last census.

POINT 3.—It will also contain a complete list of all National and Local Trade Organizations, with just the information about each that you want to have convenient for reference.

POINT 4.—It will contain an alphabetical list of Roses, up to date, and whose accuracy as to spelling of names, class, date of introduction, etc., you can depend upon.

POINT 5.—It will contain a similar list of Chrysanthemums, also up to date. One that can be relied upon as authoritative.

POINT 6.—It will contain a similar list of Carnations.

PRICE ONLY $2.00.

? Can you afford to be without this book? We don't believe you can.

"Frozen Callas."

I have seen callas, growing both in pots and in solid beds, in greenhouses, frozen until the leaves dropped down, and when thoroughly sprayed, after the air began to warm up, till the frost left the leaves, all straightened up and not one leaf or flower suffered. This experience was repeated several times as the house was heated only in the coldest weather. HARRY.

When through any accident callas or any other plants are frosted, shade at once from the sun and syringe freely. But be careful to keep shaded from the sun for at least a day. THOS. MCCARTHY.

Danville, Pa.

Snails.

We were troubled by snails; we had some 6½ inches long when moving or crawling. Now, every fall we clean thoroughly under the benches, the walks, etc., so the snails have no hiding places, and we have not seen a snail this season. Years previous we used to have our seedlings eaten off and carnation flowers injured by the snails. It pays to keep clean and tidy. W. B. WOODRUFF.

Westfield, N. J.

The World's Fair.

Applications for about 180,000 square feet in the horticultural building have been received. With the space assigned to foreign governments this about takes up the whole space and as applications are still coming in fast the exhibits will have to be cut down to the best.

Mr. Vermuth has sent word that all the leading grape growers and wine makers of Germany have made application to him for space and intend to make a splendid exhibit of viticulture.

Work on the horticultural building is going on so rapidly that it will soon be completed.

In response to the various circulars sent out by the department many donations of plants have been made and seeds of winter and early spring flowering plants sent in from many European houses as well as from American seedsmen. The Japanese commissioner, M. Tegima, and his secretary, Y. Yambe, were in to see Chief Thorpe about their floral decorations at the Fair. Mr. T. advises them to obtain most of their material in this country as there is not time to get much of it imported and established in time. He supplied them with a list of about 400 species of Japanese plants which are now cultivated in this country and Europe. Of course much of the distinctively Japanese material, the dwarf trees and other examples of Japanese horticultural art, will have to be brought from Japan as well as most of their rarer bulbs and herbaceous plants. M. Tegima returns to Japan about the 15th of March to report to the Imperial Commission; he then expects to come back here prepared to make the north end of the island in Jackson Park an exact representation of the highest Japanese floriculture and ornamental architecture. Both M. Tegima and M. Yambe show an acquaintance with our system of botany much superior to that of the average well educated American. One of their school text books is Gray's botany and a German flora.

Mr. Wittbold called at headquarters in the interest of his friend A. Lietze of Rio Janeiro, who intends exhibiting a collection of caladiums and other tropical plants.

ESTABLISHED IN 1880.

Hammond's Slug Shot Works,

MANUFACTURE

Insecticides & Fungicides

of Established Reliability

FOR ALL USES

SOLD IN ANY QUANTITY BY THE SEEDSMEN.

Slug Shot Kills Bugs.

A cheap powder destructive to Insects which are injurious and destructive to Plants, Shrubs, Trees, Vines, Potatoes, Melons, Cabbage, Currants, Etc. Used in all latitudes since 1880, with SAFETY to man, beast and fowl. Put up in perforated screw top canisters, five and ten pound packages, and barrels and half barrels.

Thrip Juice Kills Lice, Scale and Caterpillars.

A concentrated liquid insecticide for destroying the Lice, Scale, Caterpillars, Mealy Bugs, Etc. NON-POISONOUS diluted with 20 to 40 quarts of water. ARSENIATED for orchard use. It is the cheapest insecticide in the world. Diluted 800 to 1000 parts of water. Put up in packages of from one-half pint to barrel.

Scrofularia for Carpet Beetles, &c.

A compound powder of the most effective character as a preventive of Carpet Beetle ravages, and the destruction of Bed Bugs, Cockroaches, Ants, etc.

Grape Dust for Mildew.

A thoroughly reliable powder for preventing Mildew on Roses, Lettuce, Grapes Gooseberries, e'c., whether in greenhouses or not.

Solution of copper.

A concentrated liquid fungicide prepared ready for immediate use on trees, vines or vegetables affected with rot, blight or scab with safety to the foliage, (the use of the off-hand prepared mixtures of copper are frequently at ended with destruction of the foliage); this solution can be handl d safely by any ordinary careful person without danger of harm, and will positively do good.

The various Plant Diseases to which it is applicable, are

Black Rot of the Grape, Brown Rot of the Grape, Downy Mildew of the Grape, Powdery Mildew of the Grape, Anthracnose of the Grape, Pear Scab and Leaf Blight, Apple Scab, Gooseberry Mildew, Cranberry Scald, Potato Blight, Tomato Blight, Tomato Rot, Melon Blight, Quince Blight, Black Spot on the Rose, Carmation and Mignonette Disease.

DIRECTIONS—1 Quart of Solution to 25 Gallons of water.

PUT UP IN QUARTS AND LARGER PACKAGES.

Tobacco and Sulphur. In kegs or barrels.

Powdered Tobacco.—No dirt. In kegs or barrels.

These goods cover the requirements for destroying insects or fungus in a form that is immediatedly available. Our object is to combine efficiency, safety and economy and **we do it.** Correspondence solicited.

Sow Bugs.

Judging by my experience there is no remedy that will *entirely rid* the greenhouse of the sow bugs, as they are so numerous outside that they are constantly crawling in or being brought in by the soil used for potting.

Where wooden benches are used, as I do for carnations, I find the use of heavy crude pretroleum oil an efficient preventive and for the slug also. I have used the oil as a preservative of the woodwork and notice that the sow bug is absent, where it used to be so plenty as to be a nuisance. Thus incidentally I stumbled upon a way to keep them off the plants which I had long looked for in vain. Perhaps it would be sufficient to oil the supports of the benches to prevent the bugs from creeping up. Certainly the oil is distasteful to them and keeps them down on the ground where they naturally belong. If the ground under the benches was sprinkled with the crude oil, I should think it would kill or drive away all insects that infest the greenhouse. I mean to try it. S. F.

To get rid of sow bugs place slices of Irish potatoes, or better still, of pumpkin, about three feet apart on beds or benches. Visit them about every two hours during the night, knock off the bugs that will have gathered on them into a bucket or other vessel, and replace the slices. About five crops can be caught with the same stock. Destroy the captured bugs of course. ECKHARDT & CO.

Nashville, Tenn.

If S. will put a few hens in his greenhouses he will soon get rid of sow bugs. We were troubled with these bugs some years ago and after trying several plans with only partial success we let some hens range through the greenhouses in summer and they soon cleaned out the bugs and gave us eggs in return. We have had no further trouble from the bugs, but we keep a few bantams about the place and we find them very useful.

Westfield, N. J. W. B. WOODRUFF.

I found a sure remedy for sow bugs in air-slaked lime scattered under the benches and other places that they frequent. Have had no bugs since applying above. E. H. DALY.

Rahway, N. J.

THE NEW STYLE GARDEN TROWEL.

IT WON'T BREAK A TROWEL AND DIBBLE IN ONE.

P. J. Berckmans, Pres. Am. Pomological Society, writes "It is just the trowel we need."

J. HARRIS, Moreton Farm, N. Y. "For many purposes your trowel is the best I ever saw—a grand tool for setting out cabbage, strawberry and tobacco plants."

Practical gardeners all indorse it, saying it will save its cost daily in the market garden. 3 SIZES, No. 1, 8-inch tool steel, tempered and polished, 40 cts. No. 2, 7-inch bright steel, 30 cts. No. 3, 5 inch, 20 cts.

Mailed on receipt of price.

Gas Tar on Hot Water Pipes.

Can any of the readers of the FLORIST tell me how to clean gas tar from hot water pipes? Last fall, through the ignorance of some one, the pipes were all coated with gas tar and at the present time the plants present a sorry appearance. It is proposed to clean the pipes with turpentine during the coming summer. Can they be thoroughly cleaned in this way? Is there not some better way? Others besides myself have suffered from painted pipes during the past winter in this neighborhood and advice will benefit several. I hope this will be the means of warning some brother florist of the consequence of painting heating pipes.

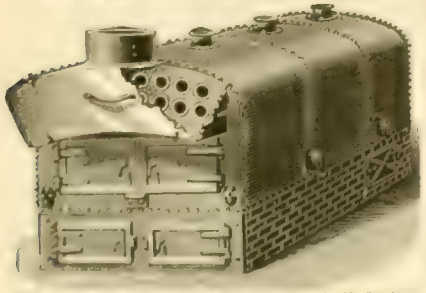
Harrisburg, Pa. JOHN FRASER.

"And ——."

A reader sends us the following acknowledgement of goods received and remarks "The curiosities of literature are not exhausted yet by a long shot." His position seems to be well taken. Here is what he bases his opinion upon:

"Dear sir—A few lines to you and will say that them seed came all right & i am ever so mutch a Blige to you for them extre packs you sent me & i have Bin getten my seed from a nother man But he has Bin acken a posum with me & it is time to stop & my order next year will Bee som what Biger & i Remain yours truly."

A Big Job Before Him.



Cholly—Me boy, are you weally in twaining?

Chappie (firmly)—I am.

Cholly (aghast)—Pwize fight?

Chappie (severely)—Do you take me for a bwute? No; I'm twaining wigidly, to be able to carry a prize chrysanthemum in my buttonwhole.—*Dansville Breeze.*

THANKS for compliments regarding our special spring number.

SEVERAL communications have been unavoidably laid over until next week owing to lack of space.

ARE YOU laying your plans so as to be able to attend the Washington Convention of the S. A. F.? It is not too early to lay out your plans for the summer and Washington should be on your program for August.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Clubs Again.

Under this heading Mr. A. H. Ewing (page 613) takes some pains to criticise the list of subjects chosen by the S. A. F. for its essays at the convention to be held in Washington.

Now, while I am quite willing to admit that some of the subjects chosen may not be particularly scientific or on a plane to meet the requirements of one as well posted as Mr. Ewing, still there are some which I think will well repay even such as Mr. E. to travel to Washington to hear. It must be remembered that a great many members of the S. A. F. are not men who have the advantage of being thoroughly well posted in matters appertaining to their business and they want the most important features of their every day requirements thoroughly discussed. If Mr. E. could be in my office but two or three weeks he would soon be convinced of that fact by reading some of my correspondence and the executive committee are well aware of that fact also.

Each member of the executive committee is required to hand in several subjects for essays and then, after carefully going through the whole list, thoroughly discussing every one, they are finally voted upon and the subjects receiving the highest number of votes are the ones selected; and this is as it should be. Many of the members for whom those subjects are particularly chosen do not have the advantage of ever being able to attend a Florist Club meeting, where, of course, such subjects, or something akin to them, are often up for discussion. I think that if "his satanic majesty" can not get much "wool" from "shearing the pig" some of his imps must have gathered considerable in his absence, as any one can see who visited many of the florist places previous to the year 1885 and has visited the same places since. In fact we need not go so far as that, for a great many men will frankly tell us that the S. A. F. has been a very great benefit to them in their business, and I think, for one, that there are very many hundreds who will be benefited by it still.

The Society was originally started with a view of benefiting every florist on this continent; and its main object in the future, as in the past, should be "the greatest good for the largest number." Now, if Mr. Ewing will come to Washington next August I think he will find many things in the essays to interest even him, for, although the subjects chosen are somewhat similar to some of previous years, yet the men chosen to write the same will no doubt treat such subjects in somewhat different form, and in such a way that they will be attractive to all.

The S. A. F. has been called upon to father a good many things; now, Mr. E. wants it to become the mother of all the Horticultural Clubs. What a nice time the lady would have nursing up the refractory children! In trying to give soothing syrup to stop the yelling of one she would invariably incite the jealousy of the next squalling youngster; but, I have no doubt, in time the babies could be quieted down for an hour or two's sleep if only to waken up to renew the fight. But on this subject let me suggest to Mr. E. that he prepare questions embracing all the subjects hammered at and present to the secretary in ample time to give that worthy officer the opportunity to place them in the hands of efficient men for answers.

I may be premature in venturing to remark that I think the members of the executive committee are amply able to take care of the best interests of every member of the S. A. F., because they are selected every year from widely different localities. I know they spend considerable time and pains to get all the information they can appertaining to the requirements of all classes of its members, and, while giving every subject presented the most careful consideration, it would not be just to the large body of its members to give any one particular person or section more consideration than others.

In conclusion, let me suggest to Mr. Ewing that before the next executive committee meeting in January, 1893, he prepare a list of essays on a plane that will lead the S. A. F. to *somewhere* and hand the same to his neighbor, Mr. Dunlop, and he can rest assured the committee will be only too pleased to give them every consideration.

JOHN N. MAY,
An ex-member of the Executive Committee of the S. A. F.

I have just read Mr. Ewing's article entitled "Clubs Again." It is an interesting article. What he says about the essays of the S. A. F. as compared with the club essays is certainly sound, but that the S. A. F. is traveling a road to nowhere I do not agree. In my opinion the S. A. F. has used up its mileage and can not travel at all. The time has arrived when it must find another job. It's all talk now. The work that was originally laid out to do is now finished. True, it was so valuable that we found it beneficial to form local clubs all over the country in order that we need not wait a whole year for the benefit of a florists' meeting, and now that the clubs are established the S. A. F. is out of a job, or more properly speaking, its efforts in that line are not generally solicited by its members.

Now let us do something for the benefit of the trade that the local organizations cannot accomplish. Let us deal with national questions and leave small matters for the local clubs.

We want a standing committee to look after express companies, to gather all in-

formation during the year, make reports and see that different points are discussed. Let this committee take up one or two cases of frozen flowers and make the company pay up; give such a committee power to test cases of difference; there is plenty of work of this kind and highly interesting. This is work we can not do alone at home. There is the supervision of our postal interests, our importation laws—of vital importance; in fact all national laws affecting the trade in any way should be carefully scrutinized by the National Society in order to put just such work before the S. A. F. as is wanted.

I would advise the following changes: First, discharge all the state vice-presidents (the majority of them are no good) and in their place look to the president and secretary of all the local clubs. When any subject presents itself before a local club which it finds too important to handle alone its officers can lay it before the secretary of the S. A. F. who will collect all these to present to the executive committee. By this means this committee can see just what is especially desired by different parts of the country and make arrangements to have all such subjects explained and settled. It will also tend to create more enthusiasm in the attendance when each club knows that some of their business is to have a hearing before the S. A. F. If this plan were adopted it would make a number of other improvements possible, one of which is this: it would virtually make all our local clubs separate parts of a *whole*; as Mr. Ewing puts it, the S. A. F. would be a sort of grand lodge. Are not all the flower shows also separate parts of a whole? If we will look at things in that light why can't the S. A. F. issue an annual pass to each member in good standing which will admit him to all the shows?

There are a few more benefits which might be derived from this plan which I think of and doubtless many which have not occurred to me, but before advocating any more I should like to hear from others. C. B. WHITNALL.

Milwaukee, Wis.

Under the above caption, Mr. Ewing, of Toronto, in the AMERICAN FLORIST for February 25, overhauls the Society of American Florists and expresses disappointment regarding the work of the organization as at present conducted.

The subjects of the essays proposed for the next meeting appear to be the especial cause of Mr. E.'s sadness. And as he contemplates the insufficiency of the program for the Washington meeting he is moved to exclaim, "It does really seem to me as if the S. A. F. had got on to a track that led to nowhere," or as he afterwards expresses it, "to a hole in the ground." Well, "a hole in the ground" is better than "nowhere," for in it you can plant a tree or a bean, and truly without holes in the ground our business would be at an end.

But let us see what is the trouble with the list of subjects announced by the committee. Here they are: 1, Hybridization and the Improvement of Plants and Flowers; 2, The Propagation of Roses; 3, The Comparative Value of Commercial Fertilizers; 4, Insect Pests in the Greenhouse, their cause; 5, Club Root, Its Cause and Remedy; 6, Flowers for Holiday Demand; 7, Marketing Cut Flowers; 8, Floriculture for Children; 9, Commercial Integrity; 10, Decorative Art.

What is the matter with that list? True, it does not take in everything. That is impossible, and if it were possible it would be too bad, for that would leave us nothing to talk about next year, but it seems to cover broadly nearly all departments, and there is no subject in the list which is not of vital interest to some considerable number of our members.

Mr. Ewing, however, believes "a list might be got up which would be productive of more benefit and provoke more discussion among the members." In this connection if Mr. E. will take the trouble to look at the AMERICAN FLORIST for December 24, 1891, he will find this note:

"The Executive Committee of the S. A. F. will meet in annual session at the National Hotel, Washington on Tuesday, January 12, 1892. Many of the members of the Society no doubt have ideas as to subjects which could be with profit embodied in the programme for next summer's convention, or could suggest to the Executive Committee plans of improvement or advancement in the Society's work. *Now is the time* to bring such matters to the attention of the Executive Committee, that they may receive careful consideration, and all such assistance from the members at large is sure to be welcomed by the Executive Committee. Communications should be addressed to the secretary."

Here was the opportunity for any one who could suggest a list of essays that would so fire the great gathering of gardeners and florists with enthusiasm and would be such an improvement on the past, that the members would all forget their sight seeing, their bowling and other social dissipations and crowd the hall to overflowing with earnest seekers after knowledge, and every member of the Executive Committee would have been delighted to so easily get rid of this hardest of all the duties imposed upon him.

Mr. Ewing further enquires: "Do not the clubs want a sort of grand lodge over them to appeal to and to settle disputes as they come up?" All that can be said in reply to this is that no appeals of this nature from any of the clubs to the S. A. F. have yet materialized.

Outside of attendance upon annual banquets and other good times the experience of the undersigned is somewhat limited. In the one club with whose affairs he is well acquainted the only subject which they are "forever hammering away at and never settle" is the surplus in the treasury, and it would take considerable temerity for any member of that club to stand up and seriously propose asking the S. A. F. to settle it for them, even though it be true that had it not been for the S. A. F. there would have been but little surplus to hammer at.

It would be a great pity to have so good a boy as our genial friend Ewing join the ranks of the "pessimistic politicians," but those who know him personally will be slow to believe that he feels half so badly as his writing would indicate. It is a pleasure, however, to inform him, the clubs, and every one interested, that looking down through the slit in the top of the "Question Box" one sees that that useful piece of furniture is not yet half full, and that there is plenty of room there still for the reception of burning questions, all of which, if received in time, will be duly inserted in their proper place in the programme, so that they can compete on even terms with the Washington Monument, the Capitol, the White House and Mades' Hotel, for the undivided attention of the visitors. WM. J. STEWART.

Interstate Commerce in Plants.

The bill introduced into the house of representatives by a California congressman, and mentioned in your edition of February 25, is very evidently intended to prevent the spreading of some of the fruit diseases which are now prevalent in some localities. For certain hereditary injurious diseases of this class it may be well to prohibit interstate transportation, and thus perhaps succeed in overcoming them.

But that cannot refer to the florist's business, we will take for instances, the scale, the mealy bug, and the mildew, three of the most formidable examples of the diseased conditions of plants, which demand the florist's attention. What would be gained, or what may be the object of prohibiting by such stringent legislation, the interstate transportation of vines or plants of florist's stock which are diseased in either of the three ways mentioned? Truly, the purchasing florist does not wish to receive plants and vines in such conditions; yet, need the government interfere in the purchaser's behalf? Will not clean healthy plants always recommend themselves, and are they not the best advertisement for any house? What is more, are not these pests the result, rather then the cause of the diseased or unhealthy condition of plants? It is well known that by proper attention, these plants can easily be rid of the pests in question. They are already to be found in every state and territory, so why attempt to prohibit their spread by such an enactment? The healthiest man will become diseased by the influence of impure surroundings, and so it is with the plants. I consider the proposed law to be as improper as if the government desired to dictate to every one how he was to grow his plants, and yet the latter law might be more effective in the desired direction than the one now before congress. It is not in the plant but in the care it receives, that disease finds its origin. So the importation of diseased plants can be of but little detriment as compared to what our honorable lawmaker would have his colleagues believe.

Add to this the punishment which is to be inflicted upon the transportation companies, which shall be compelled either to refuse to carry plants and vines, or to exact sufficient bonds to indemnify them from the shippers, who will thus be doubly liable. Candidly, I do not believe that the measure was intended in the first place to apply to the florist's business, for flowers, being in a sense merely exterior luxuries, their being diseased will not be of any consequence as far as the welfare of the people or the country may be influenced. And their transportation should not constitute a misdemeanor.

But should there be local contagious diseases of fruit trees, plants or vines, that would be spread by shipment, the law is desirable, but should be differently worded, to prevent misconstruction. In it's present shape I do not think the law will pass, especially if the florists will inform their representatives of the possible harm such legislation would do the florist's profession. E. H. M.

A Glimpse of Gardening at Dosoris.

The accompanying illustration from a photograph taken here last September represents a style of ornamental shrubbery gardening to which I am very partial. And this group is not quite two years planted. As you will observe, a sweeping carriage driveway passes along on the right hand side and is edged on both sides by a stone curbing. Next to the stone curbing is a belt of the pure white moss pink (Phlox subulata alba) which 17 months before was planted there in a single row from 2½-inch pots. It is hardy as a rock, evergreen, always mossy and pretty, and in April and May when in bloom resembles a band of white ribbon.

A GLIMPSE OF GARDENING AT DOSORIS, MR C. A. DANA'S SUMMER RESIDENCE ON LONG ISLAND.

Up till two years ago this piece of ground was occupied as a French fruit tree garden and contained the most perfectly arranged style of this gardening in America. It was a perfect maze of stakes, trellises, etc., and the contortions and intergrafting the poor apple, pear, plum, cherry, peach and other trees had to submit to and retain so as to represent the perfect form, were so agonizing in their formality that even their faultless shape could not atone for their misery. But I hated them.

The winter, two years ago, was mild and our work got pretty well finished up and the ground was still open and we felt strong. So we held a parley, then there was a great tearing up and a big bonfire and my heart grew well again.

The ground was then levelled and I staked it off for specimen evergreens, one of a kind. And in order to give these specimens ample room for mature development they were planted a reasonable distance apart. But this gave us an empty looking bed. There was no need of this though, for we had many other choice shrubs in our nursery praying for a shift even of a year or two's tenantcy, so we lifted them according to their selectness and planted them into this clump to temporarily fill up the open spaces between the permanent plants. Now some sage will probably exclaim: "There it is again, too thick planting, then neglect, and all is spoiled! It's the same old story." Ah, Mr. Wiseacre, where will Mr. C. A. Dana and I be then? We don't work that way on this place. We every year chop out and burn up specimen trees which for beauty, symmetry and rarity would draw the very blood from your heart in pity for them. And our heartlessness is kindness. We never allow trees to overcrowd each other. The member at fault has got to go, no matter how rare, handsome or costly it may be.

We also have a large number of barely hardy shrubs which we plant out in summer and lift them in November and keep them over till April in a cold pit. We keep these for variety's and old acquaintance sake, and the trouble they give us is very little. Now such an open bed as this is a summer paradise for these shrubs. Conspicuous among these you may notice in the picture the two monkey's puzzle trees (Araucaria imbricata). There are also sweet bay, Portugal and Spanish laurels, strawberry tree (arbutus), raphiolepis, azara, evergreen berberis of several kinds, aucubas, English and Japanese hollies, evergreen magnolias, crape myrtles, nandina, leycesteria, evergreen euonymuses and many others. Among these temporary plants you may notice in the border behind the moss pink a strip of rosemary in bloom, then a continuation of the row of sweet myrtle (myrtus), and towards the far end a belt of the California pepper tree (schinus) raised from seed the spring before.

Groups of fine flowering French cannas in the distance add variety, luxuriance and brilliance.

Among the hardy shrubs in this group are a fine assortment of retinosporas, Japanese, Carolina and other hemlocks, many kinds of box, Berberis Japonica, broom, single and double furze, many euonymuses, yews, podocarpus, dwarf Cryptomeria Japonica, daphnes, ruscus of sorts, evergreen elæagnuses, bamboos, hardy heaths, the southern jasmine (gelsemium) and many ivies (hedera).

This group has given us a great deal of satisfaction and it has been a source of great attraction to visitors. There is something in bloom or otherwise interesting in it all the time. Because of its great variety you cannot give it a casual glance, you have got to look at every plant because in the interior every one is different. WM. FALCONER.

In the Tropics.

Castleton Gardens, in Jamaica, W. I., nineteen miles north of Kingston, affords as interesting a study of palms, as one could well wish for. Situated along the base of the Blue Mountain range, in a hot moist valley of equable temperature the growth is all that can be desired. Individual specimens are not so massive as you will find in the Botanical Gardens of Martinique or Trinidad, yet the natural advantages are far superior. A mountain torrent of a stream, divides the grounds on one side, forming beautiful cascades and water falls with natural basins where aquatics of all sorts are in their glory of prodigious growth. The water lily tribe are just in their element, blooming to their heart's content, from the giant Victoria regia down to the tiny forms of dwarfed lotus. The freest blooming semi-aquatic is Eucharis Amazonica.

This sweet spot of cultivated nature and also the Hope Gardens, in the suburb of Kingston are kept up at Government

expense, and are at once the attractive feature of the island to tourists and naturalists. At Castleton "in habitat" every known specie of Palm is supposed to be represented, and certainly the display is grand in general effect as well as in individual beauty of single specimens. A large Phœnix rupicola is the most perfect fountain of long green fronds that could be imagined, while rare and strange forms will immediately attract the attention of the ordinary observer and impress the connoisseur. Araucarias tower up a hundred feet and more affording a pleasing change to the infinite variety. Tall graceful Cocos flexuosa over top dwarf forms. Tree ferns and draccenas bank the whole as well as tropical shrubs and vines, presenting showers of bloom, solid masses of purple and crimson and gold bewildering the senses and dazzling the eyes of the beholder. Camphor, allspice, clove and other "scented" trees and shrubs fill the air with fragrance, agreeable and rare, at least to the Northerner, while the innumerable humming birds and bright hued moths delight the naturalist.

Most all tropical trees are glorious in brilliant bloom, vivid crimsons, lustrous purples, azure blues, gorgeous yellows and the most magnificent of them all is Amherstia nobilis, with long pendent masses of scarlet and yellow flowers, surprisingly similar to Cattleya blooms.

Orchids are suspended from mimosa trees, in long avenues and boulevards; crotons, jasmine and Hibiscus sinensis in variety are almost too common, and poinsettia likewise with flower bracts often 24 inches across!

If one could gather all this glorious wealth of floral bloom for an Easter decoration in any northern city it would seem to one unaccustomed to tropical luxuriance as if the gates of paradise were opened up to mortal sight; such, indeed were my impressions on beholding for the first time the morning light in the tropics.

GROVE P. RAWSON.

Elmira, N. Y.

Cypripediums.

C. PAVONIANUM INVERSUM.—A distinct hybrid, having for its parents C. venustum and C. Boxallii, the former being the seed parent. Sepals large and pointed, of an apple-green color heavily shaded with blackish brown; petals of the same color, spotted in the upper portion; lip light green shaded with brown. The whole flower has a shiny appearance as if varnished.

C. MAGNIFLORUM.—A beautiful and rare species of recent introduction, producing its flowers on a tall stem 2 to 3 feet high. Sepals long and pointed, yellowish green; petals long and narrow, greenish and twisted several times; lip very large and long, yellowish in color.

C. JOSEPHIANUM.—An American hybrid of great merit, raised by crossing C. Javanico-superbiens with the pollen of C. Druryii. Of very robust growth. Sepals white, beautifully veined with green; petals of the same color except the purplish line through the middle and a few spots in the upper portion; lip yellowish green shaded and spotted with purple.

C. TESSELATUM PORPHYREUM.—One of the best hybrids produced up to date. It was obtained by crossing C. barbatum with the pollen of C. concolor. Leaves broad and short, beautifully tesselated. Sepals large, almost flat, veined and shaded with vinous purple; petals of the same color, twisted several times; lip long and narrow, yellowish shaded purple.

C. SUPERBIENS.—Known also under the name of C. Veitchii. This is one of the best cypripediums. Leaves beautifully variegated; flower large, well proportioned; sepals whitish veined green; petals greenish white suffused with pink and spotted all over with dark spots; lip large, purplish.

JOS. MANDA, JR.

New York.

NOTED AT THE ORCHID SHOW.

The fact that two orchid shows in one locality can attract such an extensive following, both in and out of the trade, shows in itself that the interest in this class of plants is not a temporary craze. It is doubtless a more intelligent interest than it was a few years ago; people know more about orchids than formerly and the same thing may be said of other plants.

Siebrecht & Wadley had to contend with adverse circumstances in the arrangement of their show, for the young blizzard that attacked us in the beginning of the week caused both loss and delay in the transportation. Mr. Siebrecht only reached New York two days before the show, from Trinidad, his steamer being several days overdue, and this delay caused the loss of some botanical curiosities from the firm's West Indian plantation.

The first noticeable feature of the show was a pyramid of foliage plants in the entrance hall, crowned by a beautiful cycas. The arrangement was so graceful and the effect so imposing that it was enough to convert anyone to the belief in plant decorations, as opposed to those of flowers alone. Siebrecht & Wadley were pioneers in the use of decorative plants; most of us can recollect the time when flowers, and flowers only, were the rule in house decorations. Speaking on this subject, Mr. Wadley stated that when arranging a dinner table they make a point of using a few plants in the room, perhaps in a window or in any niche where they prove effective. Without them the table decoration looks incongruous and unfinished; the plants make it seem part of the harmonious whole.

The largest display at the show consisted of Cattleya Trianæ and there were some fine varieties, though no very large pieces. A most exquisite form of white Trianæ was to me the loveliest thing in the show; the color was so absolutely pure and the flower large and well shaped. A valuable form of Trianæ alba for present standards demands vigor and beauty of form as well as departure from the usual color. As a foil to this were some very dark Trianæ, the lip of unusual size, and very broad sepals. A plant of C. labiata was of great interest; its recent re-introduction has directed so much attention to the plant.

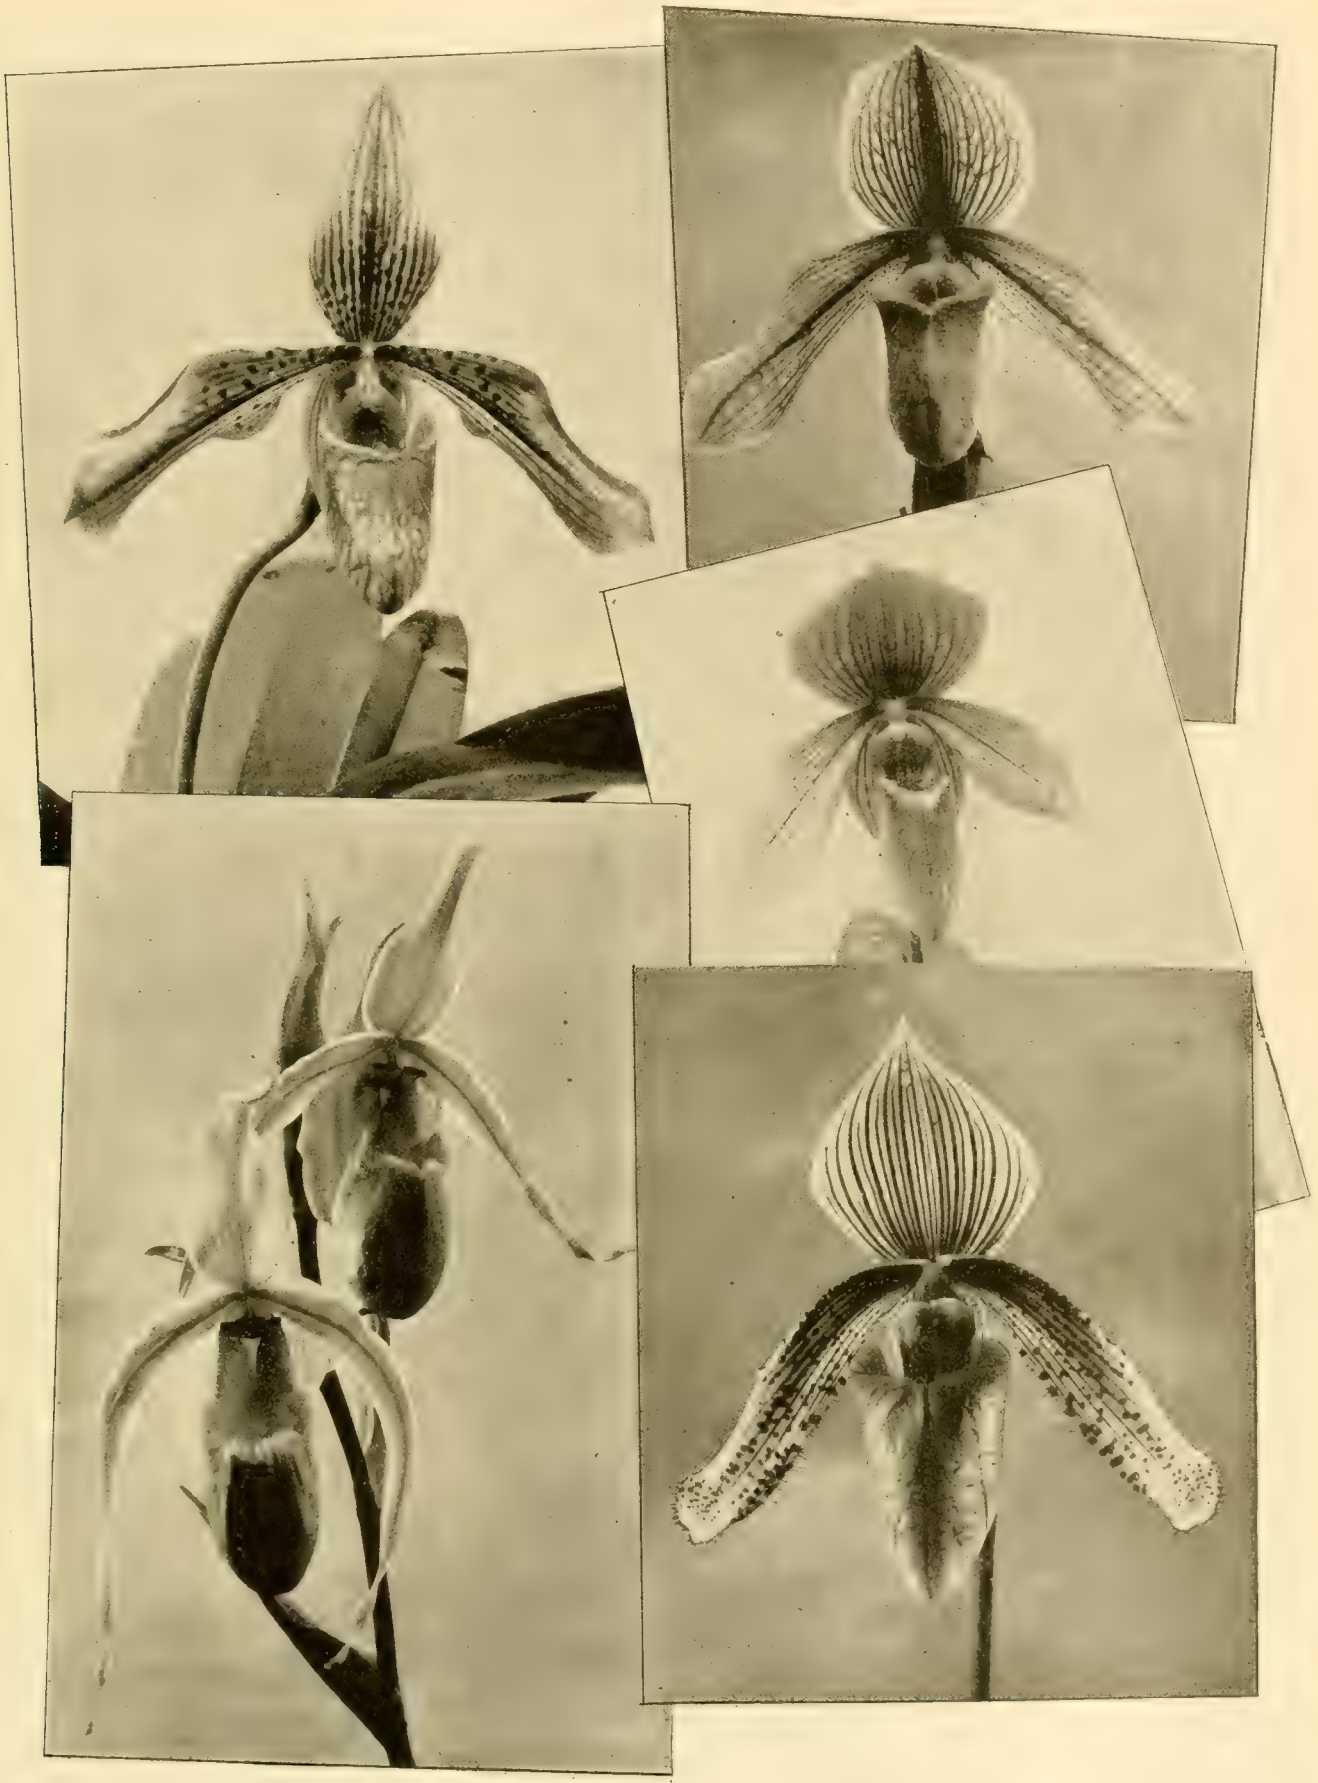
A charming little piece of Dendrobium Phalænopsis was noticeable for its excellent color. There were surprisingly few cypripediums at this show. Among the cut blooms from the collection of Mr. Hicks Arnold was Cypripedium microchilum, an exquisitely dainty little thing, comparatively rare. It is quite suggestive in color of its parent niveum, but the two little green eyes are distinct. Mr. F. L. Ames, who was a visitor at the show, is a great admirer of this family of orchids and named C. insigne Sanderianum as his special admiration; the color and marking is so handsome and distinct. C. insigne really appears to be the florists' cypripedium; apart from its easy culture it appears in so many variations of tint and harmonizes so well with brighter flowers in decoration.

A big plant of Cymbidium Lowii, with five fine spikes of bloom, occupied a conspicuous place at one end of the main table. A good many paused reverentially at this table to look at a handful of strelitzia in the Christopher Columbus jug from San Domingo. It recalled the time when a new rose—I think Her Majesty—was first shown in New York. The blooms were displayed in what was labelled as the original peach blow vase, though there is reason to believe this piece of bric-a-brac hailed from Macy's rather than the Morgan collection.

In the Goodridge collection there were some very fine phajus, also an exceedingly good variety of Odontoglossum grande.

The Kimball collection of cut flowers was, as always, extremely good, containing a quantity of fine cypripediums. Among other flowers were some anthuriums; a large bloom of A. Andreanum was of special interest to the writer, being from one or two originally imported plants, formerly in the Such collection at South Amboy. The other plant of this pair is in the Carpenter collection at New Brunswick. The flowers are exceptionally large; it appears to be the best variety known.

A rare orchid, described by the New York *World* in the Short Hills collection was named as *Cyclone crista ala alba*. It was not noted at the Eden Musee, but after wrestling with the combined inaccuracies of reporter and printer we may infer that the plant meant was Cœlogyne cristata alba. One often needs a good deal of detective ability to identify an innocent botanical name in the average newspaper.



A cluster of cocoanut bloom in its big boat-like sheath was a souvenir from the Trinidad plantation, while a big orange and crimson cocoa pod suggested another enterprise on the part of the same firm. In addition to the palms, etc., S. & W. are now planting coffee and cocoa in their tropical nurseries. The culture of palms and decorative plants at this place has already passed far beyond the experimental stage, while another annex is the culture of bulbs in Bermuda. Experience proves that home-grown Lilium Harrisii cannot possibly compete with the Bermuda-grown bulbs, if only for the lack of proper ripening.

A feature to be commended in this show was that the orchids were not mixed indiscriminately with other flowers. The arrangements was uniformly graceful, though the Musee has been altered in a manner very awkward for a flower show, and the general wish expressed by the visitors was that the firm will feel inclined to continue their annual show.

EMILY LOUISE TAFLIN.

Variations in Nature.

It has long been a recognized fact that some varieties of flowers produce more variations than others, or, rather, more correctly speaking, produce variations where others do not. One of the most prolific of this class has been that beautiful rose "Baroness Rothschild." We

CYPRIPEDIUMS

C. PAVONIANUM INVERSUM.
C. MAGNIFLORUM.

C. JOSEPHIANUM.
C. TESSELATUM PORPHYREUM.
C. SUPERBIENS.

have as offspring three distinct sports, Mabel Morrison, Merveille de Lyon and White Baroness. It may seem a little strange that one variety of rose should be more inclined to sportiveness than another. Another variety that has given us three distinct colors is the old Safrano, yet again another one (although it is very rarely that the dark varieties sport to any extent at all), namely, Agrippina, gave us a climber somewhat different in texture from the original parent.

The last one I will name is Catherine Mermet. To the florists of this country that lady has given more than any other flower of the age. Possibly some of your readers may think I am egotistical when I say that the Bride is the most valuable rose that has been introduced into America during the present century. Last year we were treated to another sport from this rose, the Waban; now we have still another, the Bridesmaid. This is a variety that has been advertised somewhat under the name of the "Hugh," but as there seemed to be considerable opposition in the minds of the growers and retailers as to the adaptability of the name to such a beautiful rose, after consulting a good many of them in regard to the matter, as there is undoubtedly a good deal in a name (in spite of Shakespeare to the contrary) Mr. Moore kindly consented to change the name, and I am sure that those who have decided to grow the rose this coming season will not regret its having been done, neither can critics claim that the name will conflict with any other now on the long list of rose names.

Referring again to the sportiveness in character of different flowers, many interesting things could be said under this heading and we would like to hear what some of your correspondents have observed in this line in regard to our popular flowers throughout the country.

JOHN N. MAY.

Some of the Seed Novelties

BY WM. FALCONER.

[*Continued.*]

CENTAUREA MARGARITÆ.—Said to be a handsome white flowering biennial, but if sown early to bloom the same year like an annual. Said also to be a new introduction of '91.

GOLDEN MEXICAN CLEOME (Cleome aurea).—An annual bearing corymbose racemes of bright yellow, showy flowers.

CYPRIPEDIUM SEED is certainly something unique in our seed lists. But now-a-days these orchids are being raised by specialists in hundreds from seed.

GLOXINIA CORONA.—Unusually large flowered. Throat, deep violet red, and veined; orifice, indigo blue.

HELICHRYSUM, SILVER BALL.—The best of the white flowered helichrysums. It did fine with me last year.

HELIOTROPE, LEMOINE'S GIANT HYBRID. Vigorous growers blooming freely the first year from seed, and the seed germinates quite readily. But we cannot reasonably expect uniformity in size or coloring from heliotropes, any more than from ageratums or geraniums raised from seed.

IMPATIENS SULTANI, HYBRIDS.—The term hybrids here is a misnomer. But the species has been broken, and now we have various shades of salmon, rose, pink and violet. These Zanzibar balsams are very easily raised from seed, and they grow and bloom beautifully out of doors in summer, and naturalise themselves with the freedom of a clover-oxalis about the paths, benches and pots in the greenhouse.

IPOMÆA SETOSA.—I grew this plant a dozen years ago, as I have grown scores of other plants not yet offered in seed lists, but this does not detract in the least from its genuineness as a novelty. It is an exceedingly rank grower running 20 to 30 feet in a season, in fact it is a pronounced example of tropical luxuriance. In late summer its reddish-purple flowers are borne in threes in cymose bunches.

IPOMŒA BRONSONI offered last year was I think, the rankest growing vine I ever planted; the vines ran out 30 to 40 feet along a fence, but showed no signs of blooming. Restricted root room or hard wood no doubt would induce blooming.

IPOMŒA HEAVENLY BLUE.—This was raised by Mrs Theodosia B. Shepherd, of Ventura, California. Last year Mrs. S. very kindly took great pains in explaining its whole history to me, and sent me flowers, leaves and stems of the plant, also seeds and photographs, from all of which I am satisfied the plant is one of exceeding great beauty, and the color is the loveliest blue imaginable. Mrs. S. is satisfied that it is a natural hybrid between Ipomæa Leari and Mina lobata, but I cannot help being a little sceptical on this point; I would suggest you grow it and Ipomæa rubro-cœrulea near each other for comparison's sake.

A MEXICAN DOUBLE-FLOWERED MORNING GLORY is now offered and presented in very high terms. Two years ago I was consulted about such a thing but I had never seen anything of the kind. We are told it bloomed profusely near Brooklyn last summer and that its flowers are as large and full double as those of double petunias, in solid and variegated colors, in all shades of pink, red, blue, purple and white.

IRIS ROBINSONIANA, Doryanthes excelsa and some others of their nature may be termed Job plants, because of the patience we would have to possess to wait to see them bloom. This iris grows 7 to 8 feet high and is the most gigantic of its race. It is indigenous to Lord Howe's Island off the east coast of Australia, and will probably be hardy and a valuable addition to the garden plants of Southern California and the Gulf coast. A few years ago it was more commonly offered in seed lists than it is today. The flowers are white, beautiful, ephemeral, opening a few at a time, but continuing in bloom for months. Noticed two years ago in The FLORIST.

MARVEL OF PERU.—A variegated-leaved one with white flowers.

MIGNONETTE.—Among the varieties made most of are "Reseda grandiflora alba pura" with pure white flowers, and Guihieneuf's Ruby or giant red.

FORGET-ME-NOTS.—Blue Perfection, a form of dissitiflora; and a rose-colored form of alpestris Victoria are highly recommended.

MALVA MOSCHATA ALBA appears again. Not at all new, but a hardy perennial, easily raised from seed and worth having.

MELOTHRIA ABYSSINICA.—A neat-habited, free-growing plant of the ornamental gourd race, bearing a profusion of small orange-colored fruit.

MOLUCELLA SPINOSA.—A gigantic shell-flower from Assyria. Annual or biennial. The commoner M. lævis has long been in seed lists and cultivated more for its oddity than beauty.

MIMULUS CARDINALIS PICTUS, with golden-yellow corolla, and purplish-scarlet eye and throat; aureus, pure yellow; and carneus, creamy-white or rose-colored are forms of a pretty species of Oregon and California. Easily raised from seed, and although a perennial may be treated as an annual.

MUSA MARTINI is a new banana plant for which much is claimed. Of smaller proportions than ensete, and hardier, and the seeds are said to germinate quickly and almost without fail.

NELUMBIUM LUTEUM, the American lotus, is made a specialty of by one firm. It is a very beautiful water plant when established in our ponds, or ornamental tanks, and like hardy pond lilies of any sort, can also be grown in tubs or half barrels in the open sun in summer, and the water emptied off and the tubs put down cellar in winter. It is perfectly hardy.

NICOTIANA COLOSSEA has appeared for a year or more. It is the most gigantic of the tobacco plants; I don't mean that the seeds are gigantic or the packets of seed, they are both minute enough. I have also sown some seed of N. glauca, an old friend, and in general appearance the best substitute for eucalyptus I know.

ŒNOTHERA ROSEA.—Why leave my little friend in the 5 cent rank and file in seeds and spread its glory as a plant in warm paint and praise?

PANSIES.—Some of the best under new names are selections from Odier, Cassier, etc., strains unsurpassed for excellence.

PYRETHRUM ULIGINOSUM.—A capital hardy perennial, daisy-flowered, easily raised from seed and blooms the first year. Being old as the hills does not detract in the least from its merits; but the illustration of it I find in many catalogues in fictitious.

THE TULIP POPPY (Papaver glaucum); A dwarf annual poppy obtained by Herr Max Leichtlin, Baden-Baden, from Armenia. It belongs to the corn-poppy race, and has bluish-green leaves, and vivid scarlet showy flowers, reminding one of a Duc Van Thol or Vermilion Brilliant tulip. The two outer petals form a cup; the inner petals are more erect and clasp the anthers.

CARDINAL POPPY has very large full double flowers of vivid scarlet on a white ground. Empress of China is a very large single flowered poppy; blossoms white, feather-margined with scarlet.

PETUNIAS.—The clematis-flowered are so named because of the resemblance of their open blossoms to those of clematises of the Jackmanii group. Ring of Emerald is a dwarf form with crimson flowers broadly banded with green. Steel-blue, veined, expresses the color of the flower, which is also prominently reticulated with nerves. The Giants of California are represented as having flowers 4 to 5 inches across and ruffled or frilled at the edges. These measurements are modest enough; some of my superbissimas last year were bigger than that, and mine were as nothing alongside some of the California Giants Mrs. Gould sent me flowers of from Ventura. Pink Mound is a dwarf bedding variety with rose-pink flowers.

PRIMULA OBCONICA GRANDIFLORA.—Said to be a hybrid between P. obconica and P. cortusoides amæna, to be perpetual blooming, and yield rose-colored flowers larger than those of obconica.

ROSEA POLYANTHA HYBRIDA.—These roses are said to be easily grown from seed and the plants to bloom the first year. I didn't try it last year, but will

this spring. Did any of your readers try it? There is nothing difficult in raising roses from seed, but, except in the case of plain species when like produces like, it is a very rare occurrence to raise anything worth saving from seed.

SAGITTARIA MONTEVIDENSIS. — One of the South American arrowheads, now frequently seen in summer in pond lily tanks in gardens. It is a capital grower, and bears long spikes of white blossoms. It must be wintered indoors as it is not hardy. But as it ripens lots of seed, and the seed if sown early in warm quarters will give blooming plants the first season, we may treat it as an annual if we want to.

SALVIA HIANS, a perennial best treated as a biennial, from the Mountains of Cashmere. Neither new nor very beautiful. A somewhat coarse plant.

SCHIZANTHUS PINNATUS NIVEUS is said to be the whitest flowered variety of this common annual.

SOLANUM ATROPURPUREUM. —A formidable spiny plant from South America, and not infrequently used in subtropical beds in our gardens in summer, both for its foliage and ornamental fruit.

HYBRID STREPTOCARPUSES occupy quite a prominent position again this year. They are very beautiful free-blooming little plants, but as the seed is very fine and they don't germinate very quickly it takes considerable patience to get up a stock of them.

TRITOMA LEICHTLINI AUREA.—A rare, very interesting and desirable variety of torch lily. The plant is dwarf, altogether herbaceous or deciduous, sparsely leaved, and the flowers are entirely yellow. A curious feature about it is that the flowers at the top of the spike begin to expand before those at the base; in this particular they act contrarywise to those of the other torch lilies in common cultivation, which open from the base up. Tritomas are South African plants, almost but not quite hardy here, perennial and easily raised from seed, the seedlings, if strong, blooming the second year.

"NEW REMONTANT TRITOMAS" are said to be from crosses between "corallina, Rooperi, MacOweni, etc." These torch lilies do intercross whenever opportunity affords, just as corn or cucumbers do. And as they grow quite readily from seeds this is a good way to get up a stock of them. It is very interesting to note the difference between the seedlings, some plants will be much more vigorous than others, some will have narrow and others broad leaves. The flowers and style of blooming too may be different.

VERBENA HYBRIDA ERECA COMPACTA.—A very dwarf and compact variety, forming little cushions about 6 inches high and wide; flowers of good size and various colors.

VESICARIA SINUATA.—Vesicaria græca and V. utriculata are pretty little yellow flowered crucifers that we used to treat as hardy biennials. They bore their yellow blossoms in late spring and these were soon succeeded by inflated seed pods. But the sinuata I am unacquainted with.

AMONG ZINNIAS the dwarf habited double flowered form of Z. Haageana keeps well in front, and it deserves to, for it is quite pretty. There is also a variegated leaved variety of the common zinnia. But really I don't know that gold splashes or spots on the leaves will be much of an extra attraction to these coarse but indispensable annuals.

Washington.

Electricity has of late played an important part in many of the most effective floral decorations, and the novelty of its application was strikingly illustrated the other evening at a dinner given at the Arlington by the Montana millionaire De Lamar to Mr. and Mrs. Russell Harrison, where the Smalls surprised the guests with what one not inappropriately styled "floral pyrotechnics."

The table was an elongated oval set for 39 covers. In the center was an oval mound some five feet in length made up of maidenhair ferns interspersed with clusters of La France and white lilacs. From the middle of the mound rose to the height of four feet above the table a superb specimen of Areca lutescens, the base resting on the floor, while its long and gracefully overhanging fronds were strung with innumerable closely wired miniature incandescent electric jets of various colors. Near either end of this table, opposite to one another, were two small round mounds of ferns from the midst of which rose great clusters of long stemmed Laings encircling sprays of white lilacs. Beneath the maidenhairs in these fern mounds, hid from view, incandescent lights imparted to the foliage a wonderfully vivid yet delicate green. Immediately above the areca, from the center of the ceiling, were suspended 16 electric cables—four larger than the rest, extending to the four corners of the room, entwined with smilax and studded with 16 candle power incandescent jets, while the intervening shorter cables were twined with Asparagus plumosus and studded with vari-colored miniature jets, the whole forming a marquee shaped canopy of which the central portion constituted a closely woven net work of A. plumosus.

From the center immediately over the areca was suspended a large magnet, the sides of which were encased in steel springs clamped at the base by an iron catch which adhered to the magnet by virtue of its polarity, the catch being so arranged that any interruption of the electric current would cause it to drop and the springs to suddenly fly from their perpendicular into a horizontal position, not unlike the sudden opening of a closed bud into a full bloom rose. And here the ingenuity of the decorator came into play. He wired innumerable short stemmed full blown La France roses to bits of iron which readily adhered to the strongly magnetized steel springs and iron plate clamp so as to form a huge ball of real roses, two similar balls or globes of roses being suspended over the table from chandeliers on either side, equal distance apart. These floral globes proved to be the feature and surprise of the evening, for, constructed as they were, it enabled Mrs. Harrison, seated at the right of the host at the close of dinner, just as the guests were arising, by touching a concealed electric button to break the current of electricity and drop the clamp a few inches below the magnet, causing the springs suddenly, amidst exclamations of wonder and delight, to fly open and rain down upon the assembled guests a veritable shower of roses.

The ladies at this entertainment were all supplied with the choicest of corsage bouquets and the gentlemen with boutonnieres. The reception, ball room and buffet were all elaborately decorated with foliage plants, azaleas and lilacs, while vases of the finest Magna Chartas, Beauties and Brides occupied every available space. The Smalls on this occasion certainly scored a decided success.

With the commencement of Lent closes the great rush of this winter's season. All larger society entertainments will cease, but also with Lent commence here in Washington more especially, those attractive little social gatherings which in the height of the season had to be neglected—so-called informal teas, familiar calls and brief visits of Sunday afternoons among foreigners. Florists who have the requisite material will always find a ready demand for novelties. Among the busiest of the busy are the two end men of the florists' line along F and Fourteenth Sts., C. F. Hale and the genial Durfee, of the Masonic Temple flower store (Strauss & Co.) The Gude Bros. and Freeman, in their new and more spacious establishments, have evidently also done well. Violets of fine quality are plentiful again, while carnations are decidedly scarce. Jacqs are not about yet, and Brunners, Meteors and Woottons do service in their stead. The old favorites, La France, Brides and Perles, are plentiful and fine.

The last of the White House State dinners for the season was given in honor of the Supreme Court and the floral decorations were all in yellow. The table was set for 50 covers, the same as at the Diplomatic dinner. In the middle at either end and in the center were low vases filled with narcissus (double Von Sion and Trumpet Major). On either side of the center piece, along the middle, were low oval baskets containing fine specimen plants of Ananas sativa variegata, and on each of the four corners of the table stood low vases filled with choice Perles. Each finger bowl contained sprigs of lemon verbena and valley. The boutonnieres of the gentlemen were Perles and the ladies had yellow satin Watteau bows with their names on one, while on the other was the White House, both in gold. One of the mantels was banked in Perles and Niels framed in overhanging adiantums, the other in Trumpet Major narcissus with a similar border. The chandeliers and wall brackets were draped with Asparagus tenuissimus. The reception parlors, and especially the east room, were rich in their array of foliage plants most artistically arranged in center and alcove groups, while the broad mantels of the east room were fairly aglow with the brilliant hues of exotics, many of the finest plants I am told coming from the government nursery in charge of Mr. Geo. H. Brown.

A noticeable design was recently prepared by Strauss & Co. for the funeral of the late captain of the Capitol police. It consisted of a large scroll of galax leaves, five feet high, with a placque of white La France, Mme. Pierre Guillot, Brides and valley, running diagonally across it and tied at the upper left hand corner with a broad satin ribbon. At the upper right hand corner a small silk U. S. flag was draped with crape and over it hovered a dove with outstretched wings.

Cadmus has removed from his old place of business on R street and opened a fine establishment near by on Fourteenth St., between R and S streets.

Miller has closed his city salesroom on Fourteenth street for the season.

An appropriate and somewhat novel center piece appeared on the table at a dinner recently given by some prominent gentlemen here to Mr. Frank Thompson, president of the Pennsylvania railroad. It consisted of an embankment 6 feet long, 15 inches high and 3 feet wide, made up of smilax and laurel. The road bed was laid with select white gravel, the ties were of Roman hyacinths, the base of the rails of yellow campernelles and

their upper surface of white carnations. On each side of the embankment appeared in pink carnations the word Pennsylvania. The table itself was festooned with Asparagus plumosus and was adorned with several large vases filled with Mme. Pierre Guillot and Wootton roses. The design came from the Masonic Temple floral establishment (Strauss). Z.

The formal opening of J. R. Freeman's beautiful new flower store on 13th street took place on February 25. The place was magnificently decorated with plants and flowers and was crowded constantly with visitors. The store is 103 feet long, the back part being finely lighted by an immense skylight and the finish is all in white and gold so that everything shows off to best advantage. Throughout the store, in corners, on pedestals and vases and in a grand group in the rear portion were choice azaleas, genistas, Harrisii lilies, amaryllises, dracænas, ardisias, kentias, arecas, latanias, araucarias and other show plants, some of the palms and araucarias from 8 to 12 feet high, besides masses of lily of the valley in boxes, tulips, narcissi, English primroses and daisies, Adiantum Farleyense and other ferns. Among the most noticeable ferns were specimen plants of Nephrolepis davalloides furcans with a natural spread of over 6 feet each and one of N. davalloides spreading at least 8 feet. Some fine blooming plants of cattleyas and other orchids added richness to the display.

At the end of the counter was a handsome green shaded vase 6 feet high, filled with 150 spikes of Harrisii lilies with Asparagus plumosus trailing to the floor. On the white marble counter was a superb display of cut orchids and Farleyense in cut glass bowls set on mirrors, and behind these were tiers of choice flowers in every variety, beginning in front with violets, forget-me-nots, mignonette, lily of the valley and lilacs and backed up by large vases of Brunners, Luizets and Beauties.

The window display was also very attractive and was composed entirely of growing plants. A margin of maidenhair fern, then boxes of lily of the valley, next Azalea Mme. Van der Cruyzen flanked by groups of white lilacs and the background formed of Harrisii lilies, nephrolepis and palms.

One experience connected with the opening we will let Mr. Freeman relate in his own words: "In conversation with a representative of a morning paper I said my intention was to present each lady visitor with a small bunch of flowers, but that I had not advertised the fact for obvious reasons. Judge of my surprise when I picked up the paper next morning and found he had announced the proposed distribution of flowers. The result was that we had as much as four men could do all day to attend to the recipients of our bounty. Just how much stuff we disposed of I am afraid to tell lest I may deprive somebody else of the experience to be gained by such an experiment.

"But the most peculiar experience came in receiving all through the day and evening missives requesting that on account of the weather or the indisposition of the writer, would I please send by bearer the flowers that would have been received had the writer been present. Probably the richest of all was a young fellow who said he was employed in the auditor's office, U. S. Treasury, and represented that there were 4 or 5 ladies in his office who were unable to come on account of the weather and had requested him to call and get their flowers for them. I reached for the order book and said, 'will you kindly leave the address of each lady and I will send a wagon to their respective homes and deliver the flowers, as I should hardly care to trouble you to carry them.' He hesitated a moment as if about to comply, when catching the eye of an employe who was enjoying the situation he suddenly 'caught on,' and saying 'I believe I won't do that,' he took a hasty departure.

"All through the day we had old servants, male and female, presenting the compliments of their mistresses, and 'would I please'? etc., etc. And still on Friday and Saturday they came by the dozens, belated but none the less earnest in their requests, and I suppose they will keep coming until the days are too warm for them to make the necessary exertion and probably this may follow me for all time, as they are liable at any time to pick up an old paper containing the fateful adv., and persuading themselves that it is a perpetual offer, I may be allowed the opportunity and privilege of reducing my stock in so cheerful and effective a manner.

"This was the funny part, but the number who received and fully appreciated the compliment with words of thanks and congratulations and good wishes and whose sincerity was plainly written on their faces fully recompensed me for the experiment."

New York.

The break in prices of cut flowers has been remarkable in its suddenness and completeness. The market has gone entirely to pieces.

The quantity of flowers coming in is rapidly increasing, and the commission dealers are at their wit's end to dispose of the accumulating stock. Two or three wintry days during the past week have acted as a slight check to the panic, but the respite is only temporary.

Roses of all kinds are piling up fast. For large quantities prices are quoted as low as $20 per 1,000. None are sold at these figures in small lots, but the heavy buyer has had no trouble to stock up at such prices. There is still a fair supply of extra fine hybrids and American Beauties in the market, and the price on these remains in the neighborhood of $6 per dozen. The Baroness Rothschilds and Mabel Morrisons from J. N. May, and Magna Chartas from Julius Roehrs are superb, and L. C. Nash and F. R. Pierson & Co. are still on top with their Beauties. The Gontier seems to hold its own better than any of the other small roses and is sold out readily every day. Jacqs are getting very plenty, the price realized now for average stock running but slightly ahead of Mermets and Cusins.

Carnations, violets, lily of the valley and Harrisii lilies are faring as badly as the roses. Valley is offered as low as $10 to $15 per 1,000 and Harrisiis as low as $3 per 100. Tulips also have been sold as low as $10 per 1,000.

The retailers have not begun to complain much yet regarding the effect of Lent. Thorley claims to have had no trouble from that cause so far. He is particularly elated over the success of his decorations at the two Havemeyer dinners recently. There were two tables used each time, each table being 18 feet long. The decoration on one table was a mound of Anna Alexieff roses, and on the other lilacs and cattleyas, each mound being 13 feet long and 4 feet wide. Daffodils, acacia and mignonette tied with apple green ribbon form a very handsome combination for opera bunches. These bouquets are placed so as to form a mound in the center of the table at dinner and are afterwards distributed.

The regular meeting of the Florists' Club was held at Germania Hall on Monday evening, March 14. The interests of the members and the club's best course to advance such, was the subject for discussion. The discussion was brief, however, most of the evening being devoted to arguments on the proposed club room.

Mr. May showed some drawings of the proposed vases for exhibition of cut flowers, which gave general satisfaction.

A communication from the manager of the coming Actor's Fund Fair was read offering a silver cup as a trophy to be competed for by the retail florists on different evenings during the continuance of the Fair. The matter was referred to a special committee.

An invitation from the Buffalo Florists' Club inviting members of the N. Y. Club to attend their annual banquet was read and a vote of thanks for the same was passed.

The committee entrusted with the duty of selecting and recommending a suitable location for a permanent club room which should be open continuously for the use of the members, reported and were instructed to engage rooms at a cost not to exceed $1,000 per annum, including all expenses.

The bill relative to the shipment of diseased plants, now pending in Congress, was discussed at considerable length, and a committee consisting of Messrs. O'Mara, Dailledouze and May was appointed to protest against its passage.

Dailledouze Bros. made an attractive exhibit of Carnation Miss Moore.

The meeting was well attended and more interest than ever was displayed by the members.

The Klunder Company's store is closed up. Creditors who have been hunting for assets report nothing favorable as yet and it looks dubious for them. Several wholesale dealers are badly bitten. The name of Klunder seems to carry ill fortune with it wherever it is used.

Johnnie Weir's store in Brooklyn was the scene of quite a little sensation recently. A colored man who lives next door rushed in, revolver in hand, shouting "Where's the man who destroyed the peace of my family?" All the customers made a bolt for the door. As the colored gentleman had been married but 24 hours at this time his conclusions were regarded as premature and he was locked up. Johnnie says the man had a "hallucination," but it was full two days before Johnnie was himself again.

The auction rooms begin to show signs of spring activity. Young was the first in the field with a lot of fine trees and shrubs from Holland on March 10. Prices obtained were good. A lot of young pink pond lily plants also brought satisfactory prices. Elliott's first sale will take place on Friday, March 18, and will consist of dormant stuff, such as Holland shrubs, tuberoses, gladioluses, caladiums, etc. Mr. Elliott reports the seed trade as having recovered from the slight depression of February and now quite good.

Mr. W. A. Bridgeman, of Thorley's, met with a sad bereavement recently in the loss of an 11-year old daughter and a 2½-year old son from diphtheria.

Mr. Chas. Thorley proposes to go south for a ten days' recreation trip.

J. A. Penman reports the sale of the Dictionary of Gardening as still continuing steadily.

The sudden cold snap of March 11 caught some of the growers napping and in some cases they had a very narrow escape.

The chrysanthemum show at Madison Square Garden next fall will close on November 6 instead of 7 as previously stated.

Visitors from Pittsburg this week: Mr. B. L. Elliott and Mr. A. M. Murdoch.

Philadelphia.

The crop of Easter lilies promises to be very good, all the lily growers having fine benches in various stages of growth.

C. D. Ball of Holmesburg has great success with L. longiflorum; he confines himself to this variety and claims it to be much better than Harrisii, being the earliest, most graceful in appearance and a great deal the best keeper. If it should happen to be warm weather at Easter time, and it very often is when Easter is as late as it is in this season, the Harrisii fades quickly, as it cannot stand the heat, while the longiflorum, having more body to the flower, will hold out much longer. The erect habit of the flowers makes it easier to pack when shipping, which is another point in its favor.

There is some of the lily disease around, but not enough to be alarmed about. Robert Craig claims it is in the bulb and can be easily seen in bulbs affected when cut open. Joseph Becker is of the opinion that careless watering and condition of the atmosphere in the house is productive of most of the trouble. He says that he can trace what little he has to these causes. His lilies will be fine, as will also Mr. Craig's; he is growing a lot in 10 inch pots, three bulbs to a pot. He had a few planted this way last season and there was great demand for them.

No *ixias* this year, however. We believe it was a gentleman somewhere in the neighborhood of Brooklyn who first saw the gold mine in these little bulbs and then smole a smile when he heard his Philadelphia brethren had commenced to dig there too.

Just before Mr. Harris sent out his lily he was planting some of the bulbs, when Mr. Craig happened in and remarked that he wouldn't get much out of that lot until next year. Picking up a bulb not much larger than a pea Mr. Harris said: "Why, there's a bulb that will produce a flower this season." "I'll go you a high hat it don't," was the reply. But it did, and Mr. Craig is now a better judge of high hats and Lilium Harrisii.

Business is moving very well for Lent, Saturday last being a very busy day all around. Roses are plenty, but do not seem to accumulate to any great extent. Mermets, Brides and La France sell for 8; Perles, Gontiers, Sunsets and Niphetos bring 5; hybrids from 25 to 50. Bulbous stuff is plenty. Valley is selling for 4, tulips 4 to 5, daffodils 4. Carnations hold up very well. Baker, who handles the greater bulk of them, has dropped the price one-fourth of a cent and now asks $2.25 a hundred for the best. It must have caused him several sleepless nights to do this.

The result of the investigation of club root in roses is anxiously looked forward to by rose growers about here. Mr. Lutz has had some specimens of club root examined by professors at the University of Pennsylvania and they say it is caused by a minute insect not visible to the naked eye.

The same gentlemen have also under examination Bermuda lilies which seem to be affected with some sort of disease. It is to be hoped they may be able to find out what is the matter and suggest a remedy.

Mr. M. A. Hunt paid a flying visit to this city this week.

Boston.

The bottom has fallen completely out of the flower trade, not gradually and gently, but all at once and with a "dull thud." Everything is plentiful. Roses have fallen 50 per cent in prices and carnations have not fared much better. The street fakirs wear a smile such as has not been seen on their faces for a long time as they parade with their big displays of carnations and violets. Carnations and street fakirs have been strangers to each other for many months. Lily of the valley, too, is in the same plebeian company and is to be seen piled up actually by the thousand on the street corners.

It does not cost the retail florists much to keep a gorgeous display in their windows at such times and just now there is quite a respectable horticultural exhibition to be seen in some of the larger establishments. Yellow seems to have its inning at present. There are quantities of yellow daffodils, genistas, nasturtiums, coreopsis, primroses and acacia, and the big vases of Jacqs which are also to be seen everywhere make an effective contrast to the brilliant golden colors. Galvin's windows looked especially pretty one day this week. One of them was bordered with selaginellas and yellow primroses massed together and in the other were some pans of orange and purple crocuses overshaded with araucarias.

Passing flower stores on these spring-like days the fragrance of candidum lilies, which comes through the open doors, forcibly reminds one of the fact that Easter is near at hand. Preparations for this important event are everywhere apparent. The crop of lilies, all varieties, will be heavy and the prospects are good for a fine supply of roses. At Waban Rose Conservatories there are a couple of houses of Jacqs, which, according to present appearances, will be unprecedentedly fine. Fred Mathieson is bringing in superb Grace Wilder carnations. The color has been good all through the season with him.

Horticultural building in this vicinity in the future bids fair to be of a more substantial character than much of that hitherto erected has been. The best is the cheapest in the end. Two representatives of horticultural building establishments, Mr. L. Pierson and Mr. C. W. Wethered, have been in town this week looking over the ground.

The tickets for the March dinner of the Gardeners' and Florists' Club at the United States Hotel are out and may be obtained from any of the wholesale or retail florists in the city.

The Mass. Horticultural Society's spring exhibition will open on Tuesday, March 22. A fine show is promised. Mr. J. H. Woodford has been elected chairman of the committee of arrangements for 1892, Mr. P. Norton having declined to serve longer in that position.

A. P. Calder, the Boylston street florist, has been arrested on a charge of embezzlement of $15,000 as secretary of the Mutual One Year Benefit Order. Bail to the amount of $15,000 was furnished.

Baltimore.

The Baltimore Florist Club met at the old quarters Monday, March 14, at 8 p. m., about 60 members present. All routine business was left over till next time for there was a feeling of a good time coming and a hilarious good fellowship among the members that made them very impatient of any delay in the proceedings and probably contributed largely to the speedy result of the election, as in one instance only was there the least trace of a close vote, viz.: the vote for president. Messrs. J. Clark, A. Scott, Jas. McNab and P. C. Erdman were elected members of the club, and after a report from the hall committee recommending a new place for meeting and the reading of special premiums offered for the chrysanthemum show (among which were one of 12 of his newest seedlings by T. H. Spaulding, silver cup by Pitcher & Manda, silver cup by Mrs. M. J. Thomas, and gold medal by J. C. Vaughan) the boys proceeded to elect officers for the ensuing year.

At the start it seemed that the night would be spent and nothing accomplished, for a tie was the result of first ballot for president, Wm. Fraser and E. A. Seidewitz being in nomination. A second ballot was taken which resulted in a victory for Fraser who was thus re-elected for another year. For vice-president there was only one nomination, Mr. I. H. Moss, who was accordingly elected. The secretaryship was apparently not wanted for no one would accept the nomination. So the present incumbent, Mr. Bauer, consented to serve another month pending selection of a successor. Pretty much the same thing happened with the nominations for financial secretary, all declining the honor till at last it was narrowed down to F. G. Burger and Robt. Halliday, Jr., the ballot resulting in a majority of 28 for the former. The only nominations for the offices of treasurer and librarian were the previous incumbents who were re-elected, Wm. B. Sands, treasurer, Chas. H. Wagner, librarian.

The treasurer's report was then read and received with enthusiasm, for it showed that the club is in better financial condition than ever before; the financial secretary's report contained one item of interest that was remembered after all the rest was forgotten; it was this: The returns from the last chrysanthemum show were $1,520. The librarian's report was put off till next meeting night, and nothing further demanding action all hands adjourned to Tierney's where a sumptuous repast was served, and where the genial effect of solid and liquid nourishment was soon apparent in the smiles and quips and merry jests that circulated freely. Much to the regret of all, the two pioneers of the trade who were expected could not be out, but while Halliday's kindly smile and Sand's hearty laugh were enjoyed there was a pleasant feeling that the old war horses were still in the field. And then what a host of new faces were there, what jokes were told in undertone, what shouts of laughter encouraged fresh sallies until everybody was talking at once. The tables were decorated with several handsome floral baskets by the city florists, but a vase of superb La France on stems three feet long was the most striking. They were presented by the Annapolis member, Mr. Seidewitz. The guests who were present were Wm. R. Smith, of Botanic Garden, Washington, and Wm. J. Stewart, of Boston.

After a few words of welcome to the guests by the president toasts were given and responded to as follows: "Horticulture—a progressive art demanding patience, intelligence and skill for its successful practice," eloquently replied to by W. R. Smith; "Gardening in the North and in the South," was responded to by Mr. Stewart, who referred to the great services rendered to the art by the Society of American Florists; "Gardening—in what direction may it advance?" was replied to by H. Ekas; "What are the true purposes

of the Gardeners' Club?" by H. Bauer; "What should the gardeners of Baltimore do for the World's Fair?" by Mr. Seidewitz; "Is the chrysanthemum furor likely to cease?" by Mr. Huggins; and "The ladies," by J. Clark. A quartette composed of Messrs. Walters, Fisher, Bauer and Kress rendered acceptable music and at the close the company joined in Auld Lang Syne. The occasion was a most enjoyable one throughout.

An event of the week was the bazar for the benefit of the Hebrew Orphan Asylum. All the booths were original in design and pretty, the floral bower, in the center of the hall, being a very neat piece of rustic work, rendered additionally attractive by numerous donations of flowers and plants from Washington and Baltimore florists. Mrs. Harrison also sent a large lot of flowers from the White House conservatories. Naturally enough the sale of all these flowers had its effect upon trade, for who would buy flowers from an ordinary florist when he could be waited upon by elegantly dressed ladies and have the proud consciousness of doing a charitable thing besides? Whether it was this occurring daily among our non-observers of Lent, or the blizzard, or merely a drop that might occur at any time, certain it is that trade seemed a little off during the latter part of the week.

The scribe was sauntering along Baltimore street the other day with the air of affluent leisure so characteristic of scribes in general, and florist scribes in particular, when he was abruptly halted and held spellbound with emotion by a sight which met his eyes in a store window. A wire window box about three feet long and six inches deep was filled with beautiful green moss; over the edges ran long trailing strands of smilax more exceeding green than the moss, and from the center there sprang in luxuriant beauty a plant which, to judge from the foliage, was a pandanus, but which produced on a stem about a foot long from the center of its crown of leaves a brick red cattleya bloom. On either side of this wonder arose from the moss, plants which were as to foliage one a Dracæna indivisa, the other an aspidistra, but bearing in full glory of expansion on long smooth stems a vermillion stanhopea and a sky blue cattleya streaked with red. To say the observer was dazed and paralyzed temporarily would be to say no more than the truth, and when he had collected himself sufficiently to turn his gaze to surrounding objects his admiring approbation was increased tenfold. Here were roses far surpassing the most ardent imaginings of his heart in size and brilliancy of color. Here were palms bearing gorgeous clusters of parti-colored blossoms and begonias which were an astonishment to behold. In short the whole window was full of colors that would give the color men work for a year to name, and forms of plants and flowers that would take the genius of Linnæus to classify. But when the name of the firm who held these rarities for sale was sought and "Milliners' Supplies" seen in bold letters beneath it, the wonder and amazement gave place to good natured contempt, which in turn gave place to to another feeling, when a few squares farther on a window was passed which contained a collection of equally marvellous flowers worked up into funeral designs. No need to attempt to describe them; they can be seen almost everywhere. "Would it not be better," your correspondent mused, "for those who put 'Please omit flowers' after funeral notices in our daily papers to say 'Please omit wax,' 'Please omit porcelain,' 'Please omit tin'?" But then, after all, there must be those who admire these horrible caricatures, or they would not be manufactured, and, if they admire them, they have a perfect right to gratify their crude taste.

Messrs. Wm. Fraser, Rob't Halliday, Jr., H. Bauer, Jno. Wiedey, C. Hess and Ed. Kress were at work at the bowling alley Friday night and the result of the contest was cause for jubilation, as it showed what could be done without preparation and also demonstrated the fact that though Hess is a little man he is a big bowler and loves the sport enough to tarry past car time and walk all the way out home. MACK.

St. Louis.

Business has been good during the past week and compares very favorably with that of other years at this same time. Large orders have been conspicuous by their absence, for few are the parties, receptions, etc. during the early part of Lent in this town. Flowers of all kinds have been plenty among the retailers, but the wholesale men still cry for more and better roses. The same thing holds good in St. Louis as elsewhere, good stuff sells well and at good prices, but poor stuff is hard to dispose of at any price.

The few days of sunny weather in the early part of the week brought out the roses some. Sunshine has been a scarce article with us for some time, and we were looking forward to a continuation of such profitable weather when, lo, the unlooked for windy and very severe cold snap came, freezing up somebody's unprotected violets and freezing most of the Florists' Club's members to their homes and furnaces on last Thursday afternoon, for they were not at the meeting. Wednesday and Thursday were the cold days, the weather since has been better. Three new members were proposed at said meeting and much interesting discussion was engaged in. Among other topics was that of fumigators. Mr. Fillmore's plan of fumigating is simple and effectual. He holds that "Prevention is better than cure" and so smokes every week, fly or no fly. His fumigator is in shape like a large milk bucket, 17 inches deep and 14 inches wide at the top and somewhat narrower at the lower part; this is without the rim at the bottom which would add about 2 inches to the height. It is made of galvanized iron. Near the bottom and just above the rim two rows of ¼-inch holes, about an inch apart in the row, are punctured and continue around the pail. It has a common handle and also a punctured lid which can be used when the operator wishes to smoke heavily and not have to watch to prevent too rapid combustion. A dry piece of kindling wood suitably prepared and a few dry tobacco stems cover the bottom and then damp ones, previously soaked, fill the remaining space. The idea kept in mind is to smoke light and often. This is by no means a new fumigator, but rather an old one, nevertheless it is good and cheap. They sometimes have legs and then the holes are usually at the bottom. Mr. Fillmore is rejoicing in the possession of a new $150 market wagon. Your correspondent found some cinerarias in blossom at Wm. Schray's with exceptionally large flowers and very fine colors.

Bletia Tankervillæ and Passiflora princeps are now making a good show at Messrs. Michel's, the flowers of the former especially make a fine display. Stephanotis floribunda, a beautiful tall climbing stove shrub, sometimes called Madagascar Jasmine, was also noticed as being full of buds. Calla Little Gem, the recently introduced pigmy calla, was in bloom but is not looked upon as a coming florists' flower by the last named firm. J. W. D.

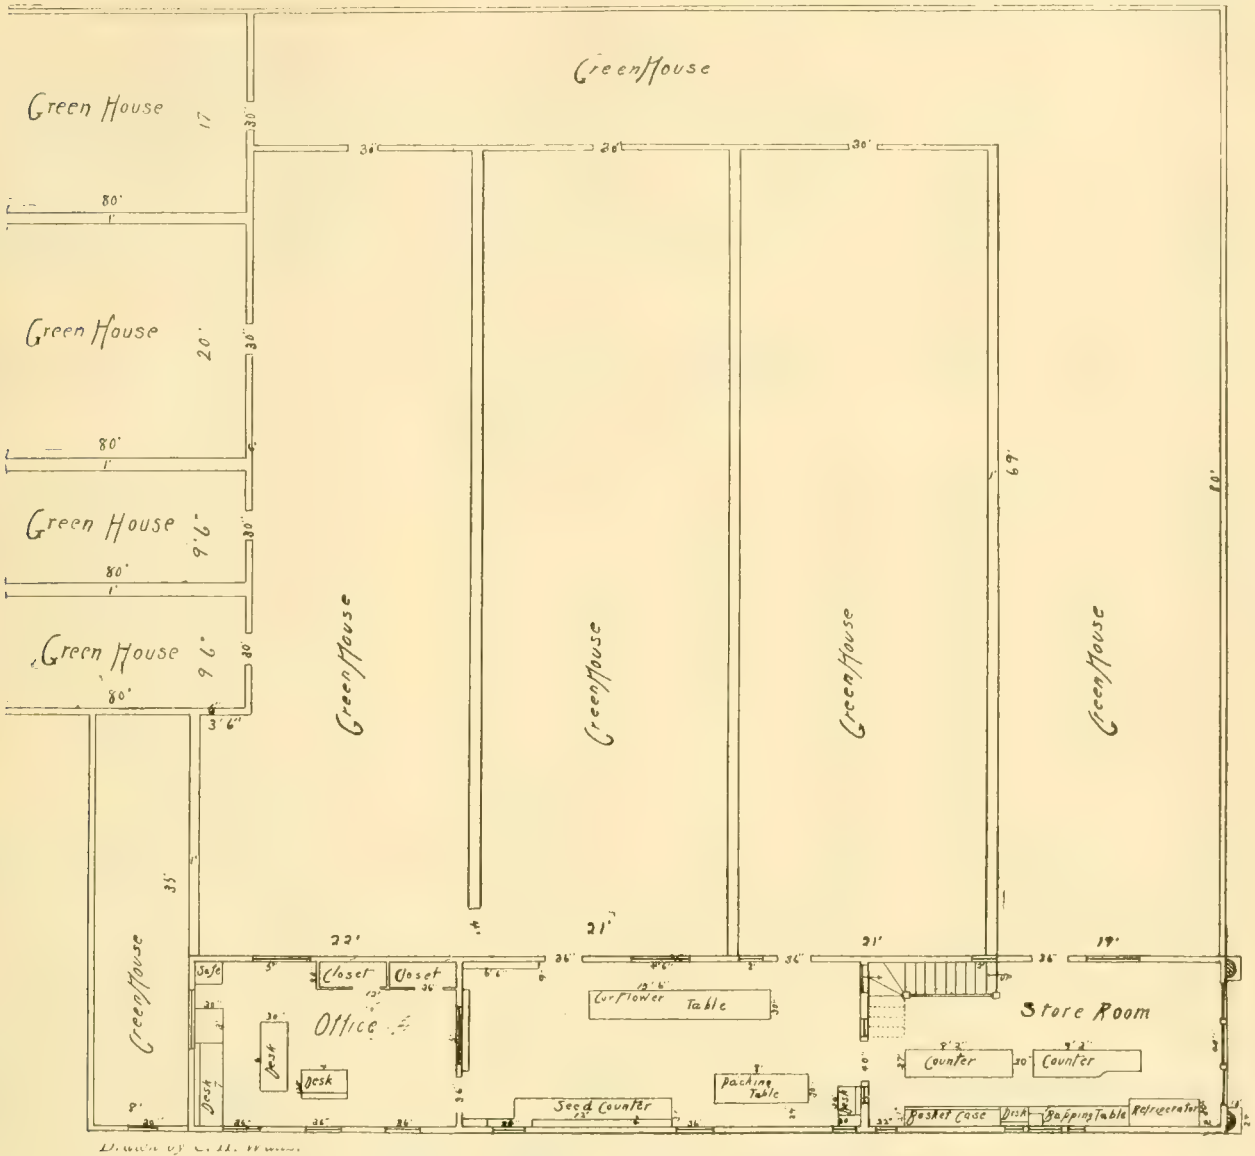
St. Paul.

The Society of Minnesota Florists held its semi-annual meeting in this city March 9. The program was as follows:

"Indoor Decoration," Walter Kerridge, Minneapolis; "Roses in Pots for Marketing," Jacob Hartman, Minneapolis; "Is our Business a Remunerative One?" August S. Swanson, St. Paul; "Hardy Shrubs that are Easily Forced, and Therefore Useful for the Florist," Prof. Green, state experimental station; "The Red Spider—How to Kill and Prevent his Appearance," F. G. Gould, Excelsior; "How can we Make this Society more Interesting and Useful to the Average Florist?" Gust Malmquist, Minneapolis; "The Best Way for Marketing Plants," R. Wessling, Minneapolis, and August Swanson, St. Paul; "Carpet and Foliage Bedding," John Vasatka, Minneapolis; "Soil Chemistry," Prof. Otto Lugger, state experimental station; "Best Way of Growing Pansies," E. Nagel, Minneapolis; "Old Neglected Plants Worthy of Better Treatment," J. E. Sten, Red Wing; "Hardy Perennial Plants Useful for Cut Flowers," Mrs. Underwood, Lake City.

Surburban Flower Stores.

At your suggestion I reply to "E. W." in January 21st issue of the AMERICAN FLORIST, by submitting plans of store etc., which are not given as models in any sense, but simply to show what we have done in this line that others may profit by the good and bad points here shown.



Our location is on a city lot 100 by 200 feet in the residence portion of our city, hence the necessity of utilizing every inch

FRONT OF MR. CHAAPEL'S STORE.

of space. The architecture of the store is in keeping with the surroundings, while the cost of the structure is comparatively low. The exterior is stained old wood brown and olive, with roof stained moss green.

The interior of the front sales-room is rich, yet simple. The wood work is of oak, with high wainscoting; the walls of rough sand finish are painted in oil (a

SUBURBAN FLOWER STORE AND GREENHOUSES.

light blue), the border decorated with a few artistic sprays of wild roses in delicate tints; the ceiling is a sky blue, shading into an autumn sunset with bright colored leaves and sprays of foliage; the expense of this is not so great, though the effect is rich and pleasing to the eye. The packing, or work-room, is beaded hemlock finished in oil.

Not depending on transient trade to any great extent, we depensed with elaborate window space, giving it up to architectural beauty outside, simply decorating the windows with a few palms and blooming plants or using vases of choice flowers, reserving the bulk of the stock of cut flowers for the ample refrigerator, provided with two large sliding doors, which at a moment's notice can be opened wide, giving a complete view of the stock of flowers on hand; when flowers are not wanted for immediate use we plunge their stems in jars of water; zinc jars made of different sizes to nest together we find durable, neat and inexpensive, but we also use the long glass jars and find hyacinth glasses convenient for small bunches of valley, Romans etc.

Referring to the plan, we find the location of the counters, wrapping tables, desks etc., very convenient; sliding boards under counters increase the available space very materially; when very busy, all boxes as soon as packed are carried by boys to the wrapping table in the packing room where they are carefully wrapped, addressed, etc.

All designs and other heavy work are arranged in the packing room thus avoiding all annoyance and confusion in the front store. A cool room in the cellar provides ample storage for designs, flowers, etc., and a stock of lumber in different widths is always ready for making up into boxes of any required size.

Having a catalogue business we find it a convenience to have the office, with telephone, etc., some distance from the sales-room; of course where only a local trade is done, this is not necessary or convenient. Electric bells and speaking tubes connecting the store, office and packing house (in rear of greenhouses), are indispensable for quick, easy and economical work, in the rush of the busy seasons, when every minute counts.

That these few descriptive notes hurriedly written may be of use to my fellow florists, is the sincere wish of

Willliamsport, Pa. HARRY CHAAPEL.

[The packing room is at the end of the greenhouses at the left—not shown in plan.]

YUBA CITY, CAL.—At a meeting held here February 17 the "California World's Fair Association of the Upper Sacramento Valley", embracing the counties of Shasta, Tehama, Glenn, Butte, Colusa, Yuba and Sutter, was organized with temporary officers as follows: Gen. N. P. Chipman, president; Judge Chas. F. Lott, B. F. Walton and John Boggs, vice-presidents; J. J. Pratt, secretary. The object of the association is to see that Northern California is properly represented in the display at the great exposition.

MINNEAPOLIS.—The Minneapolis Florist Club held its monthly meeting at the West Hotel Saturday evening, the 12th. The meeting was well attended. A good part of the time was taken up in the consideration of the advisability of holding another chrysanthemum exhibition next fall. It was decided to hold one and a committee of five was appointed to make out a premium list and have it ready by the next meeting for the approval of the club, which will be April 9.

MR. A. INGRAM, representing Hugh Low & Co. of London, England, is now making a trip through the U.S. and Canada. His address will be care of the Astor House, New York, up to April 23, when he will return to England.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00.

Advertisements, 10 Cents a Line, Agate; Inch, $1.40; Column, $14.00. Cash with Order.

Discounts, 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent. No reduction made for large space.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

CARNATION GRACE BATTLES.—This new pink carnation is very highly spoken of by those who have seen it growing and blooming, some of the most conservative men in the trade predicting that it will be *the* pink carnation of the future. Certainly anything that Mr. Edwin Lonsdale considers good enough to send out must possess very decided merit. We understand it will be introduced to commerce next year. The carnation is named after the little daughter of Mr. H. H. Battles, whose articles upon the arrangement of flowers and the color question have made his name familiar to the readers of the FLORIST.

A BUNCH of violet blooms have been received from Mr. W. A. Hammond, Richmond, Va., of the variety "May Handy," a sport from Swanley White that originated with him. The blooms are of good size, resembling Marie Louise in every respect except color, which is a very much lighter shade. Mr. Hammond writes that it is a good bloomer and strong grower.

WE HAVE received from Messrs. D. R. Woods & Co., New Brighton, Pa., a specimen plant of their new alternanthera, A. rosea nana. The specimen sent was certainly exceedingly well colored for this season of the year, and it gives promise of being very useful in carpet bedding.

PROVIDENCE, R. I.—Johnston Bros. have removed to larger and more pleasant quarters at 186 Westminster street, corner of Union.

LITTLE ROCK, ARK.—Mr. Geo. Vestal, son of J. W. Vestal, was married February 4 to Miss Lulu Hays.

CORRY, PA.—William Rhodes, the city florist, died February 25, aged 57 years, after a long illness.

MILWAUKEE, WIS.—G. Volk will remove from Milwaukee street to 222 Wisconsin street April 1.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

Appropriation.

"Who steals my purse steals trash, but he who steals" etc. But what shall we say of those who steal advertising phrases, cuts, style and arrangement of catalogue matter?

The phrase "Everything for the Garden" has been so long the trade mark as it were of a well known New York house that it seems strange to find a new firm adopting it. A western firm has an advertising cut this year of a girl working in the garden, but without copyright protection. After running it for three or four months another firm sees fit to make almost an exact copy, the original having been made from a photo taken for the purpose. Comment on such methods seems unnecessary. Has the executive committee of the Seed Trade Association provided for an essay and discussion of such matters for their June meeting?

Government Seeds and Matrimony.

WASHINGTON, March 6.—Secretary Rusk is thinking seriously of establishing a matrimonial bureau in connection with the Agricultural Department. The idea was suggested by a letter he recently received from a man out west who experimented with some of the cucumber seed sent him by the department at the instance of his representative in Congress. It appears the farmer planted the cucumber seed and his wife afterward died from eating some of the cucumbers. The farmer in his letter to Secretary Rusk said:

Your blamed cucumbers robbed me of my wife, so, instead of sending me cucumber seeds this spring, send me another wife. I hear there are a number of likely women in your department.

In reply Secretary Rusk said he had no appropriation from which he could draw money to send a wife to the widower, but suggested that the latter come to Washington and pick out one for himself. The secretary informed his correspondent that he has in the department some beautiful maidens, many sprightly widows and several well-seasoned old maids.—*Chicago Herald.*

MR. J. C. ROBINSON, of Waterloo, will add the elevator business to that of seed growing.

LEAMING CORN is said to be preferred to the large southern white sorts for ensilage and fodder purposes among the dairy farmers of Central New York, and the demand for Leaming seed is unprecedented.

BOSTON.—F. T. Emerson, the corn and vine seed man of Omaha, Neb., is in Boston on business. T. W. Emerson & Co. are preparing to continue business at the old location, having apparently effected a satisfactory settlement with their creditors.

MRS. J. S. R. THOMSON, Fort Mills, York Co., S. C.

New Double White Daisy Snow Crest.

—)o(—

A most distinct variety and an improvement on all existing sorts. Its habit of growth and size of flowers, in comparison with older varieties, is gigantic. The flowers, which are borne on stout, stiff stems from 6 to 10 inches long, are of the purest white and full to the center. When fully developed they rise to a conical or sugar-loaf form, and well grown specimens will cover a silver dollar.

It makes an admirable hardy garden plant or may be forced for cut flowers under the same treatment as violets. $2 per doz.; $15 per 100.

Dreer's Quarterly Wholesale List now ready; mailed free to the trade on receipt of business card.

FRED. ROEMER, SEED GROWER
QUEDLINBURG, GERMANY.

Toronto.

The two potters in this city, Messrs. Davis & Son and Mr. Geo. Plant, are now turning out standard pots in quantity. Mr. Plant brought down some samples to the last meeting which were said to be by all who saw them as good as the best. We have always been used to the English style of pot here and no doubt many will still cling to them for old time's sake. But why can not the standard pot be made a little larger at the bottom? Surely the root space might be as large as possible compatible with convenience in potting.

The secretary of the association hopes to get the prize list for the chrysanthemum show in November out as soon as they can be printed after the next regular meeting on the 15th inst. High time it was in the hands of intending exhibitors now.

The retail men are having their innings now. Wholesalers have had to come off the perch and prices are away down. Trade very dull is the general report this week.

Mr. Houston, gardener at the Central Prison, has a fine show of orchids in bloom just now. Cattleya citrina, many C. Trianæ, Lælia anceps, cypripediums, odontoglossums and dendrobiums in variety, make the house quite gorgeous. The fine lot of stove and greenhouse plants are all in the best of health and Mr. H. expects to capture most of the "hrsts" at the July show. E.

ROSES.

A Chance to Triple your Money.

NOW READY. (Safe Arrival Guaranteed.)

50,000 ROSES, from 2-in. pots, $3 per 100; $30 per 1000.

Plant in 3 inch pots, and they will bring you from 10c to 15c each readily.

50,000 ROSES, from 3-in. pots, $5 per 100; $50 per 1000.

Plant in 4-inch pots and they sell readily from 20c to 25c each.

N. B.—Our stock is not forced nor are the plants long and drawn, but have an abundance of leaves and roots.

Varieties you can select from by the 100 or 1000, provided one or the other sorts is not sold:

Buffalo.

Last week was an exciting time among the majority of our florists, for the annual election of the Florist Club was then held. There was a keen competition for the several honors in the gift of the club, but though the canvass was hot, no heads were broken. The lucky ones were as follows: President, John F. Cowell; Vice-President, W. A. Adams; Secretary, Edw. I. Mepsted; Financial Secretary, S. A. Anderson; Treasurer, Charles F. Keitch; Managing Committee, Wm. Scott, Dan'l B. Long, W. B. Milley, S. Pickleman and Joseph H. Rebstock.

After the election all other business was dispensed with and the members made a bee-line for the Tifft House, where Mine Host Haydon had spread a bountiful but "refined" repast. After that was disposed of the oratorical powers of the members and guests were given full scope. The late president, W. Scott, presided, and a speech, a song or a story was the order of the evening. About forty members and friends attended.

The prospects of the club were never better. The membership is strong and the officers are all enthusiasts. The Florists' Bowling Club has just been re-organized and from present scores made it will be strange if Buffalo does not make a better showing at the annual game than she has hitherto. Talk about Anderson of Philadelphia with his score of 232; our Asmus made an average of 189 in ten games and in one game 244.

Since Lent came in parties, weddings, etc., have gone out, but business is not at all bad. Good roses are in as great demand as ever and plants of all kinds never sold so well. Palmer & Son have had their windows very gay with thousands of fine daffodils, but the price is cut to 50 cents per dozen (too low). For those that have to buy such stuff this leaves an almost invisible margin. Violets were never so good and abundant here as this winter and retail now at $1.50 per hundred. From inquiry I find there are about 10,000 Harrisii growing here for the Easter trade. That ought to be enough to go round and prices are likely to be moderate.

Buffalo almost entirely escaped last week's great blizzard, which was so severe in central New York, but the weather is very cold for this time of the year, which is perhaps a blessing, for lilies, cytisus, azaleas and other Easter stuff is generally quite forward enough. G. S.

CYCAS REVOLUTA.

Special days have been set apart for the sale of Orchids.

CATALOGUES ON APPLICATION.

BEGONIAS

(TUBEROUS.)

During more than 15 years we have made a specialty of them, and by crossing and selecting succeeded in getting a strain of **low, very free-flowering plants with broad leaves and upright flower-stalks, bearing such exceedingly fine flowers and so varied as to color, as scarcely will be found elsewhere.** We recommend them as far superior to those commonly met with. We offer **fine, strong tubers** at following very low prices:

	Per 100	Per 1 00
Mixed, fine quality	$ 4 00	$35 00
" extra selected	6 00	50 00
Separate colors, extra	7 00	60.00

Smaller tubers 20 to 30 per cent less.
Double mixed, fine large flowers...$10 to $20 per 100
Splendid named doubles.....$3 to $10 per doz.

Tuberous Begonias are free from import duties. Costs of freight prepaid from Holland to New York. For 250 tubers or less, $1 25; for 500, $2.00; for 1000 to 1300, $3 25; for 2500 to 3300, $5 00

NOTICE.

HARDY DOUBLE ENGLISH VIOLET.

This Violet is darker purple, and a much stronger fragrance than the "Marie Louise." It is unsurpassed for borders and it is perfectly hardy and the foliage a dark green. Price, $1.25 per dozen by mail postpaid; $5 00 per 100 by Express. Special price on large lots. Plants ready April 15th.

John M. Freeman, Jr.,
P. O. Box 26. *WELLFLEET, MASS*

Montreal.

There was a good attendance at the meeting of the club last Tuesday evening, though some of the members were late (had been to the elections.) The spring show is to be held April 13 and 14 in the Windsor Hall. The premium list amounts to a little over $400. After business was disposed of J. Pidduck read a short paper on "Cinerarias," and after some discussion on it H. Stocking read a very able paper on "Propagation"; the discussion of the latter was left over till next meeting, as time was up for closing. The annual meeting will be on March 22, but as nominations and elections take place the same evening, it is impossible to give any idea who the officers will be next year.

Our secretary has got a very bad attack of "La Grippe." B. B. Bland's "mums" got a severe touch of "Jack Frost," but B. says he will get there next November just the same.

Business has not been quite so brisk since Lent commenced, still it has not been bad. Roses are a little more plentiful. The tail end of the blizzard came along here yesterday, but as it was not very cold it did not do much damage.

J. B.

Some canna flowers of a very rich deep scarlet color have been sent us by Mr. G. W. Grossart, Belleville, Ill., who states that it is a seedling raised by him, and that with him it is superior as a show plant to either Mme. Crozy or Star of '91. The color is certainly good.

LITTLE'S ANTIPEST.

LUDWIG & RICHTER, Florists, ALLEGHENY, PA.

Pittsburgh, Jan. 20, '92.
MR. JAMES SEMPLE, Bellevue, Pa.:
I consider your Asters "Mary Semple" and "Semple's White" the finest strain without exception, that I ever saw. Yours truly, N. PATTERSON.

Allegheny, Pa., Jan. 30, 1892.
MR. JAMES SEMPLE, Bellevue Pa.:
We can tell every florist in the country it is the best Aster in cut flowers for florists' use; has long stems and in good colors. LUDWIG & RICHTER.

Allegheny, Feb. 1, '92
After years of careful selection of the most perfect flowers of Asters saved for seed, Mr. J. Semple has brought this fine strain of Asters up to perfection. The fine perfect flowers, long stems and delicate colors make this a perfect gem of Asters. As I have seen them growing in the field must pronounce them the finest sight that ever came to my notice of Asters. WALTER HARVEY, Florist.

"Decidedly the best Aster we have seen." AM. FLORIST, Sept. 24, '91, page 141.

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following. Speak quick if you want them:

		Per 100
450	Dracæna Australis, 18 to 24 in. high	$20 00
325	" " 6 to 8 in. pots, 2 to 3½ feet high	50 00
1300	Dahlias, best vars., ground roots	8 00
	" " " single roots	3 00
900	Cannas, Crozy's Hybrids	5 00
5800	Tuberous Begonias from the finest collections on the Continent of Europe this lot gave us flowers 4 in. in diam. when growing in 2 in. pots last fall	8 00
200	Hibiscus Grandiflora, the best for florists' use, 3 inch	4 00
200	Hibiscus Grandiflora, the best for florists' use, 4 and 5 inch	8 00
3500	Ivy, English, 2 to 4 feet high	8 00
	Clematis, strong imported stock, pot grown, 8 in. pots; can now be shaken out and packed light	60 00
2200	Vincas, variegated, fine plants	8 00
2000	Echeveria Rosea, 2 to 4 in. in diam.	4 00
1000	Calceolaria, from a celebrated European grower. There was nothing on our place that attracted so much attention as did those last season; they sell at sight	6 00
7000	Hollyhocks, this lot embraces three of the finest European collections, separate colors	4 00
1000	Genista Pubescens, long graceful racemes of golden yellow pea shaped flowers, can be had in bloom Jan. 1, or can be retarded till Easter, invaluable as a pot plant or for cutting, fine plants	10 00
200	Crotons, stock plants, 8 inch, fine bushes, best kinds; a grand opportunity for any one to get up a stock of this rising race of plants, $2 each.	
1500	Pelargoniums, best varieties, 4, 5 and 6 in., fine bushy plants, 3 sizes assrt	12 00
1000	Hydrangea Otaksa, 6 inch stock	20 00
8000	Roses. We have a lot of mixed stock in 3 and 4-inch pots wintered in cold frames and in splendid condition for a shift, the stock is well ripened; the varieties in about equal proportions are La France, Hermosa, Duchess de Brabant, Marie Guillot, Malmaison, Gen. Jacq, Agrippina, Mrs. Jno. Laing, Ulrich Brunner, etc.; price if ordered before March 15	5 00
	American Beauty, splendid stock, clean and thrifty, 2½ inch pots	8 00
300	Phœnix Rupicola, 2½ to 3 feet high	75 00
1000	" " 1 foot high	30 00
750	Pandanus Utilis, 2 to 2½ feet high	75 00
100	Dracæna Fragrans, 7 inch	50 00

NOTE.—This stock is being rapidly depleted; if you see anything that you need hustle your order in or get left. April 1st we commence overhauling and rebuilding the houses in which most of this stock is growing in order to prepare them for other purposes, hence prices are a secondary consideration.

Our establishment, covering an area of 70,000 square feet of glass, is located in the heart of the city, where land is much too valuable for greenhouse purposes, and as we wish to devote more space to the cut flower business we are compelled to drop the plant trade for the present.

J. T. LOVETT CO., Little Silver, N. J.

Mention American Florist.

THE NEW HARDY ORANGE—CITRUS TRIFOLIATA,

from Japan, is actually as hardy as a Lilac, and will produce genuine orange flowers and fruits, in the greatest profusion, in any yard. It stands the winters of Ann Arbor, Mich.; and in the Zoological Garden at Philadelphia, and in the vicinity of New York City it has been blooming and fruiting for several years. It differs from all other oranges in having trifoliate or clover-shaped leaves, larger and finer blooms than any other sort, and produced over a much longer season, frequently blooming two and three times during the summer. It is a dwarf plant, forming a beautiful shrub from 4 to 12 feet high, and is equally desirable for the open ground, or for pot or tub culture; and the magnificent appearance of such a plant, covered with a sheet of snowy bloom, or weighed down by its brilliant and no less ornamental fruits, may be better imagined than described. Prof. W. F. Massey, of the N. C. College of Agriculture, planted 13 of these trees in the hills of Northern Maryland, in the Spring of 1880. They were little seedlings, out of 4-inch pots, and were exposed the next winter to a temperature of 18° below zero and 4° below at noon, with a bright sunshine, and no snow on the ground, which was frozen deeply. They were entirely unprotected during this spell, the coldest he ever knew, and were not injured in the least, not even the tender, sappy shoots made late in the fall, and are now in full bearing, and have been for some years. He is very enthusiastic over its possibilities, and pronounces it

"THE COMING HEDGE PLANT"

for all sections of the country, and superior in both usefulness and beauty, for this purpose, to anything yet introduced. Some of the points in its favor as a hedge plant are: Its perfect hardiness; its natural dense habit of growth; branching freely, close to the ground; requiring little or no trimming to keep it within bounds; its abundance of long, sharp thorns, forming a barrier which no animal can force; and last, but by no means least, it *never* sprouts from the root, so it will never become a nuisance like the so-called Osage Orange or Maclura. As an ornamental hedge for the yard, it is simply perfect. Every stem and twig being bright, glossy green, it is highly ornamental in winter as well as summer. When used for a hedge, the plants should be set from 18 to 20 inches apart in a single row. *It may also be used as a stock on which to bud, or graft, and dwarf the larger growing Oranges, and for this purpose is particularly valuable to cut-flower growers.* One of our customers writes: "MESSRS. PIKE & ELLSWORTH:—*The Trifoliate Orange which I bought from you stood out all winter and started off brisk this spring* (1891). *It did not even shed its leaves.*" F. M. WILLIAMS, Smithton, PA.

At least one tree of this beautiful Orange should find a place in every yard in the land. And this is possible at the following remarkably low prices, for which we send fine little trees, post paid, to any address, and safe arrival guaranteed: Price, 20c. each; 3 for 50c.; 6 for 75c.; 12 for $1.25; 25 for $2.35; 50 for $4.35; 100 for $8.00. SAMUEL C. MOON, Morrisville, Bucks Co., Pa.

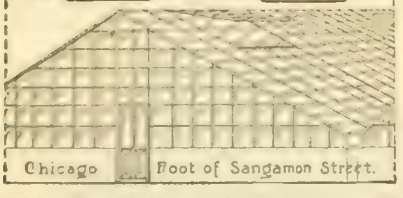
You will benefit the AMERICAN FLORIST by mentioning it every time you write an advertiser in its columns

Patents for New Plants.

It was recently reported that a bill was before, or had been passed, by Congress making it possible to secure "patents" on new and useful plants. The report seems to be entirely erroneous, as the following from Congressman Bunn, in response to a query, will show:



"I know nothing of the bill except what I have seen in the papers. There is a mistake somewhere. I have tried to correct it and hope you will do the same."

AS A SAMPLE of the monumental cheek of some of the dead beats that infest the trade one of our advertisers sends us a letter he has received from a man who had already beaten him out of a bill. The party had the audacity to write asking prices and proposing to "buy" again. The record of this party and a lot like him are on file with the Secretary of the Florists' Protective Association. If you are in the wholesale trade and are not a member of this association you are making a mistake. You can't afford to do business without the information it supplies, and the membership fee is only $2 a year.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

"Orchids."

BY EDWIN LONSDALE.

[*Read before the Penna. Hort. Society March 15.*]

Orchids were never more popular than they are at this time. They have been termed the "aristocrats of the floral kingdom", and appropriately so, and at the same time they were known as the "rich man's flower." The latter title was owing to the fact that a few years ago they were found in cultivation only in the hothouses of the very wealthy, and they were not always successfully grown even there, as many of the species were subjected to a temperature which was not congenial to their well being.

Since it is known that orchids will rebel against treatment which is known among gardeners as coddling, some writers on the subject have gone to the other extreme and asserted that they may be successfully grown and flowered in any greenhouse structure. While this is true in some instances with some species and genera, it is not a safe doctrine to advocate without some qualification.

While progress in their cultivation has been very rapid during the past few years, yet the supply of flowers has not been equal to the demand. It is not a great many years since one of the leading florists in this city (Phila.) made the statement that flower buyers would just as soon have a pansy as an orchid. It is not so now. Not that pansies are loved any the less, but the orchid is known and appreciated more. One enthusiast went so far as to say recently that more orchids had been used this winter than all previous seasons combined. This seems like a rash statement to make, yet I am inclined to believe there is some truth in it.

The orchid appears to be a remnant of a pre-existent period in the world's history. Its distinctive character in all its parts, its roots, its psuedo-bulbs, its peculiar and high-toned flowers all seem to indicate that the earth ages and ages ago perhaps, presented a very different appearence to what it does to-day. With few exceptions, most of the species are found growing in their wild state, on the trunks of trees and the rocks of mountain sides. This applies generally to those found in the tropics. There is at least one species of cypripedium—"Venus Slipper" (which are generally known as terrestrial orchids) found growing on lofty trees in the jungles of Bornea. This is Cypripedium Lowii.

Very few other plants could exist under the same conditions in which the orchid flourishes. In their cultivation, one of the first things to take into consideration is what is termed "potting," and the potting material, for herein lies the great difference between the orchid and the other members of the vegetable world. All other vegetation to be successfully grown must have *soil*. Live sphagnum moss, and wild fern roots with the soil mostly shaken out, have been found the best material in which to grow orchids. Orchids obtain their sustenance from the atmosphere; and of course moisture, of which they require an abundance during the growing season.

In the tropics where most of the best orchids which we cultivate are found growing wild, there is a rainy season, and a dry season. During the former the growth is made. The latter is their resting period. In cultivation we must imitate those conditions as nearly as possible, or we will have no flowers, nothing but leaves. Nearly all vegetation must have a resting time; or we would have neither flowers, nor fruit. In the temperate zone frost and a lower temperature generally, bring about the proper conditions.

If an orchid is placed in a pot or basket *properly;* that is to say, if an abundance of crocks (broken pots) are used, with some charcoal, and the plant secured firmly in the moss, and fern roots (or peat, as the latter is frequently called), with the crown of the plant elevated an inch or two above the level of the pot, and it is growing in a congenial temperature, it is almost impossible to give it too much water. An orchid abhors stagnant moisture, consequently the oftener water is given the less stagnant it is likely to be. Fresh water intelligently administered will drive what remains of the last dose away.

Cypripedium insigne is the best known orchid in cultivation, and it is one of the best for a beginner in the culture of orchids to commence with. I have seen it flourishing fairly well when potted in the same compost as that used for geraniums; but when growing in material recommended, it has a much more satisfied appearance and gratefully responds to the more rational treatment by producing more and better roots, and consequently a better crop of flowers.

There are other cypripediums which may be recommended for the beginner to start with, viz., villosum and what is now considered to be a variety of the latter, and that is C. Boxalli. C. callosum is also a free and sure bloomer under ordinary care and the flower is very graceful in form. C. Lawrenceanum has proven to be one of the most valuable varieties, or rather species, which we have among the "Venus Slippers." It is compara-

tively new, having been discovered in the warm and moist island of Borneo by Mr. Burbidge when collecting for the Messrs. Veitch & Sons of London about the year 1878. It was found growing upon the ground upon limestone rocks, near the banks of a river, on the northern side of the island. It is a magnificent variety; the leaves are stout and large; the ground color is in some forms grayish green, in others yellowish green and marbled with a rich darker green. It is extremely ornamental even when not in bloom. The flowers are large and are borne on very long stems; the dorsal sepal (or heel of the slipper) is broad, and is white striped with curved lines of a rich purplish hue; the flower sepals are small, white streaked with purple and having an infusion of green; petals (the straps or latchet) half an inch wide standing out at right angles, greenish towards the bases, tipped with a dull color and ornamented on both margins with hairy black warty spots. The pouch-like lip (or toe of the slipper) is very large, deep brown above, passing into yellowish green below.

There are quite a number of named forms of this species, in which the flowers are larger and the colors are much modified and brighter. The most distinct and wonderful variety of this species is that known as Hyeanum, named in honor of M. Jules Hye, Ghent, Belgium. It may be described as an Albino form of the species. It is white and green. The dorsal sepal (heel) is pure white, through which run lines of bright green, the petals (latchet) being yellowish green, the margins having the hairy black warty spots of the typical plant. The pouch (toe) is soft green, with deeper veins. It is one of the most coveted plants among cypripedium lovers.

The above description is copied from a recent number of the London *Garden*. I take a peculiar pleasure in repeating it here, because about a year ago I had the good fortune of finding one of these "emerald gems" among my own collection. It was sold to Messrs. Hugh Low & Co., London, for 100 guineas (about $500).

When I secured plants of Cypripedium Lawrenceanum, about three years ago, an orchid expert said that I had made a mistake, giving as his reasons that it flowers at the wrong season of the year for Americans to appreciate it (summer time). This opinion prevails more generally than the facts of the case warrant. Books on orchids published in Europe give summer as its proper season of blooming. With us it is one of the most free blooming cypripediums we have. When the plants were received they had not been in cultivation at all, having come here by way of London direct from Borneo. One mature growth constituted a plant. At the present time one of these plants has six flowers showing in various stages of development.

They produce under the treatment given them here two crops of flowers yearly. Commencing late in the fall the flowers may be kept easily until Christmas, for like most cypripediums the flowers remain a long time in perfection, before and after being cut. But for the benefit of the plant it is not advisable to allow the flower to remain on longer than is absolutely necessary.

Nothing in commerce varies so much in price as do plants of the different species of cypripedium. The rarity of the variety or hybrid or of the species governs the price. The commoner kinds may be bought at from $2 to $25 each according to the size of the plant, whereas the price of a new species or a variety or a hybrid can only be known upon application. The highest recorded price ever paid for an orchid was secured from the late Mrs. Morgan, of New York, who bought a plant of Vanda Sanderiana for $2,000. That was some years ago. This variety is not so rare now, consequently not so costly.

The raising of orchids from seeds is one of the most fascinating pastimes that the enthusiastic amateur or professional can engage in. The raiser of the first orchid plant from seed died only about one year ago. This was John Dominy, who at the suggestion of a Doctor Harris, of Exeter, England, succeeded in hybridizing two species of cypripediums, namely, barbatum and villosum, and the result was what is now the well known hybrid C. Harrisianum. In my own experience it is much easier to effect a cross between two species and save the seed than it is to get the seed to germinate and to raise the young plants successfully. An innovation in the history of the orchid is the offering of the seed of some species, hybridized; most of it is between two distinct species of cypripedium.

The cattleya is one of the most fashionable orchid flowers in the cut flower line. It is large, at the same time one of the most beautiful of all flowers. The delicate coloring and the exquisite formations of the flowers commend themselves to even the most casual observer.

There are several varieties, flowering as they do at different seasons of the year, making it possible to have them nearly all the year round. C. Trianæ is perhaps the most popular because it comes into bloom at the very height of the fashionable season. C. Percivalliana is also well thought of on account of its coloring, though it blooms somewhat earlier than the last named. C. labiata, about which so much has been said and written recently, is believed to be an old species re-discovered. It is supposed to flower in the late fall or early winter. C. Mossiæ is an old favorite, with flowers very similar to the others mentioned, but it blooms at a season when flowers are not so fully appreciated as they are in the winter. Its season is spring and summer. Cattleyas give best satisfaction when grown in square baskets and suspended from the roof of the greenhouse.

Dendrobiums are also well known as orchids. D. nobile has been in cultivation a number of years. A very fine specimen of this orchid was exhibited at one of the spring shows of the Pennsylvania Horticultural Society in the early seventies by Mr. Alexander Newett, at that time gardener for Pratt McKean, Esq., of Germantown, now in business for himself at Chicago. There were hundreds of open flowers upon it at the time. It created quite a sensation, as it would to-day, if such an exhibit could be made. Dendrobium Wardianum, on account of its larger flowers and delicate coloring, is also a great favorite.

Coelogyne cristata is thought well of in many parts of the country, but so far it has not met with much favor in this city. I am informed that A. R. Smith, Esq., the Troy, N. Y., banker, is more successful in its cultivation than any other amateur or professional in America. His success is largely due, it is said, to his practice of growing this species outdoors under the shade of a large tree during the hottest part of the year.

The phalænopsis is one of the most difficult orchids to grow that we have. Whoever can grow this successfully can grow any other orchid in cultivation.

Odontoglossums are most beautiful, but they require a special structure in which to cultivate them with any hope of success. A lean to house facing due north has been found to be the most satisfactory. It also delights in frequent drenchings of cold water; special arrangements for the frequent distribution of this most necessary element in successful orchid culture is in most of the large establishments where orchids are one of the most prominent specialties.

I cannot close without urging upon those who have the necessary conveniences to grow at least a few orchids. Established plants are the best to commence with and it is better to obtain them direct from those who have made a study and a success of growing orchids, for otherwise the experiment might end in disappointment. The manner in which the orchids have been potted will be an object lesson which no amount of reading can convey. It is best in orchid culture, as in everything else to deserve success, and to be successful the first essential is to commence right.

Begonia Thurstonii.

This begonia is a cross between B. metallica and B. sanguinea, sharing the characteristics of both parents. When bedded on the north side of a dwelling or fence it does exceedingly well and promises to be very useful for bedding in such situations as well as for a pot plant. It originated with Mr. C. Thurston, Paterson, N. J., some five years ago, but it has only recently been offered to the trade in quantity. We present in this issue engravings from photographs of a pot plant and a bed of this begonia.

Color Tone in Chrysanthemums.

When we speak of "tone" in a picture, a room or a flower we mean the prevailing color we find there, which in the majority of cases we term "color effect." But there is quite a difference between *tone* and *effect*. We may often see color effects without tone. But never color tone without effect.

Now the peculiar prevailing color we find in flowers is characterized by numberless names, very few of which convey any definite, truthful idea to the person who hears such names.

For instance, I heard a young lady at the last chrysanthemum show in Boston refer to the flower called President Hyde, as a "real lemon yellow" color. Now, I could find half a dozen lemons with as many distinct tones of yellow, but beyond this the general aspect of lemon yellow as we are accustomed to think of it is an entirely different color from that which I saw myself in the particular flower she alluded to upon instant examination. So I should place little reliance upon names, when I find that those who use them are not fully acquainted with their limitations.

But to characterize the color of certain flowers by definite terms is a necessity, and it is my object here to describe the effect produced on my mind of certain color tones in chrysanthemums, as there are more confused and blending tones in these flowers than in any others I know of.

The impression of color tone in single flowers one receives at a flower show is somewhat distracting because there is so much to remember; and further, there are so many difficulties in the way of placing chrysanthemums together harmoniously for exhibition purposes, that the artist's

BED OF BEGONIA THURSTONII.

point of view, the only one considered here, must not be taken without the understanding that it is only expressed opinion not involving any rigid principle.

The grouping of chrysanthemums in an indiscriminating way will certainly destroy all good color tones. We should certainly be careful about this, as the chances of good effect in floral displays are mostly dependent upon these color tones. There is such a confusing number of chrysanthemums of different types and colors that it is difficult to choose which ones are best adapted for discussion. We will hope, however, that the varieties chosen will answer our purpose sufficiently well to help us on the way to something definite.

The Robert Bottomley and the Pelican are very far away from pure white. I can see various tones of yellow, green and brown in them. Their effect is creamy in color. They should never come in contact with the Empress of Japan, the Mrs. Alpheus Hardy or the Ethel, all of which are of a sufficiently pure white to injure any other white toned down with color.

Whatever color we should decide the Louis Boehmer to be we should guard that color from contact with the pure reddish orange of the Val d'Andorre, or the pink of the V. H. Hallock and the Lilian B. Bird. The toned æsthetic brownish, purplish pink of the Boehmer would be ruined by any bright, pure or positive color; all toned white flowers would be excellent companions for it.

I do not know whether we have yet learned the true value of æsthetic color like this in flowers, but it is sufficient to say that such color possesses a value and a place which can be substituted by nothing else; it is unique.

The Harry E. Widener and the Ralph Brocklebank seem to me of an almost pure yellow color, and it seems as though no other yellow colored flower ought to be suffered to approach them. White flowers with the daintiest touches of color would be their safest companions, for instance, the Orico or the Puritan.

The magnificent golden yellow of the W. H. Lincoln is a sufficiently positive color to warn off all æsthetic characters, and such powerful ones as the Cullingfordii, Mrs. Andrew Carnegie and the Edwin Lonsdale.

The V. H. Hallock under artificial light appears purely pink, and if the full value of its purity is to be retained it should never approach the Violet Rose, in whose startling and unsympathetic company I found it at the last chrysanthemum exhibition I attended.

The President Hyde possesses an "all over" tone of yellow color leaning decidedly toward the orange yellow. Its

BEGONIA THURSTONII.

splendid color has not a suggestion in it of the hard brilliancy of lemon yellow. Such other fine specimens of rich yellow color as the Neesima, Kioto, Golden Empress, Gloriosum and W. H. Lincoln should hardly be placed in each other's proximity, they can not help doing each other some damage; each one is sufficient in itself and its color tone should not suffer interference.

It is possible that a beautiful gradation of yellow toward orange can be accomplished by combining nearly all these flowers just named in one mass, but then the result desired does not require the accentuation of the beauty in each variety. Such flowers as the Ralph Brocklebank, Mrs. W. G. Weld, Jardin des Plantes, Golden Empress, Gold, Val d'Andorre and Lord Byron are well adapted for such purpose.

The Viviand-Morel is too clear and strong a pink under artificial light to be risked in any company but white and the most delicate tints. Its delightful pink should have the benefit of the most dainty surroundings. The Violet Rose, which I have seen in greatly differing strengths of color, needs the same care; no yellow or orange should approach it.

The Violet Tomlins, æsthetic in effect and purplish lake in tone of color, which is rendered opaque by the presence of white, is a flower which would look charming in a room with dull olive green hangings.

The Edwin Lonsdale, purplish lake in color, and the John Thorpe, of a soft plum color, are two flowers so reduced in tone that we are puzzled to know what may look best with them. They certainly require æsthetic surroundings, and a slaty-blue or dull heliotrope color in the hangings of the room they are intended to decorate would be quite harmonious in effect.

The M. Freeman is another æsthetic beauty, of a dull whitish pink color also reduced in tone. L'Angelus is nearly like it in tone, but of a whitish lake color. No deep yellow, red or orange should approach these two flowers.

The dainty little pompon called Bouquet, so like the Boehmer in color, but rather reminding one of a bunch of ruddy heliotrope, might readily accompany the Boehmer in room decorations. The contrast between these two flowers in size and character has a distinct artistic value.

The John Laing, brick red running into buffish yellow, is charming in color tone, but the deep rich carbuncle color of the Cullingfordii, which ought always to have the benefit of a strong artificial light, is no companion for the Laing.

The John Salter and the Edwin Molyneaux, the Mrs. Andrew Carnegie and the Mrs. Wheeler, all æsthetic in effect, are so rich in color when placed under strong light that it is a pity they should ever be seen under other conditions. So much depends on a concentration of light over them that one might mistakenly judge them theatrical in character; but it is not too much to say that the full value and beauty of color can never be seen away from strongest light, and there is a beauty we know of that can not stand such effulgence.

The white drawing room furnished in prevailing tints of ivory picked out with gold is the vantage ground of the æsthetic toned chrysanthemum. The Louis Boehmer belongs there, and the lady with brunette hair and simple directory gown of soft creamy white or pale brownish pink tint may wear the Boehmer chrysanthemum with the consciousness that no other flower can add so much to the artistic effect of her attire.

F. SCHUYLER MATHEWS.

Objects to Contractions.

Your correspondent S. Carew seems to take quite a philosophical view as to what we should call a chrysanthemum. I would like to remind him that this is a progressive age and I, for one, feel no desire to revert to the time of our grandmothers. If they were unable to find time to say chrysanthemum pure and simple, we, although living in an age of bustle, must not try to continue the error. We have now a Nomenclature Committee to help us in the right pronunciation of words and surely S. C. does not want to nullify their efforts. H. G.

Carnation Crops.

I have read with much interest the statements of De Witt Bros., which appeared in the issues of the AMERICAN FLORIST for February 4 and 25, in which those gentlemen show that they have succeeded in gathering during the months of last November, December and January, 16,218 flowers of Hinze's White carnations from 1,330 plants, which occupied a greenhouse surface of 698 square feet; and 10,548 flowers of Grace Wilder from 1,270 plants, occupying a surface of 862 feet, in the same time. Also in house No. 2, the side benches of which being planted with 1,120 Grace Wilder plants, occupying a greenhouse surface of about 759 square feet, yielded in the same three months 12,905 superior Grace Wilder flowers; or, in condensed form, 39,671 flowers were gathered of the two varieties from 3,720 plants which occupied a greenhouse surface of about 2,319 square feet.

These statements of successful carnation culture will always command deep interest from those engaged in this industry and I deeply regret that I have been unable to devote the same close personal attention to these matters as heretofore. Realizing the importance, however, of keeping such records, my foreman has faithfully carried out my wishes in this connection, and appended hereto is a statement submitted by him:

STATE OF NEW JERSEY, } ss.
COUNTY OF PASSAIC, }

Charles Akhurst appeared before me, and, being duly sworn, tes ified as follows: I am a gardener and florist by profession and trade, and for the last five years have been in the employ of Mr. H. E. Chitty, and for nearly the whole time have been foreman and had the supervision and ca e of his greenhouse establishment.

Early in September of last year (1891) I planted a center bench of Lizzie McGowan carnations, said bench being five and a half feet wide and one hundred and ten feet in length and containing two thousand, two hundred and forty plants of this variety. I also planted about ninety feet of the center bench in another house with one thousand, six hundred carnation plants of the same variety, said last named bench being of the same width as the first named bench.

Since acting as foreman for Mr. Chitty I have carefully kept records of all roses, carnation and calla flowers gathered, such records being daily entered upon a slate, which are carried and entered in a book kept for the purpose at the end of each month, and my records show that during November and December of last year and January and the first twenty-seven days of February of this year, sixty thousand, five hundred and fifty prime flowers of Lizzie McGowan carnation were gathered from the full bench and part of a bench planted with this variety, and during December, January and the present month fifty thousand cuttings have been taken from the same benches of Lizzie McGowan, twenty thousand of which have been taken during the present month of February. CHARLES AKHURST.

Sworn and subscribed the 29th day of February, A. D. 1892, before me, EUGENE EMLEY, Master in Chancery of New Jersey.

From the above statement it will be seen that 3,840 plants of Lizzie McGowan, occupying a bench surface of 1,100 feet, or considerably less than half the space occupied by the Messrs. De Witt's 3,720 plants, produced in 119 days, 30,879 more flowers than the Hinze's and Grace Wilders produced in 92 days. In other words, considering the space used, the product of Lizzie McGowan is fully double the product of the Hinze's and Wilders combined, without taking into account the 50,000 cuttings, which growers are losing no time in reaching out for. It seems to me if the Messrs. De Witt are so pleased with what they consider satisfactory results, that I have no reasonable cause for complaint.

H. E. CHITTY.

Paterson, New Jersey, Feb'y 29, '92.

WE HAVE received an unusually fine lot of carnation flowers from Mr. Fred Dorner, Lafayette, Ind. All were of very large size, fine form and beautiful, distinct colors, on good strong stems and with perfect calyxes. Of the named sorts, Mme. Diaz Albertina is a very light pink; Mrs. Elizabeth Reynolds, deep pink; Wm. Scott, Wilder pink; Spartan, deep pink; Blanche, white; and Richmond, deep rich pink, a beautiful and very taking color. There were also included flowers labelled by number. Of these No. 3 was a deep pink; No. 37, cream penciled carmine; No. 122, a fine flower of Chester Pride type. Another flower was enclosed as a curiosity. It was a rich deep scarlet of very large size and would have been a magnificent flower but for a badly bursted calyx. Mr. Dorner is certainly doing splendid work in the production of new carnations. The lot of blooms sent were decidedly the best ever received at this office.

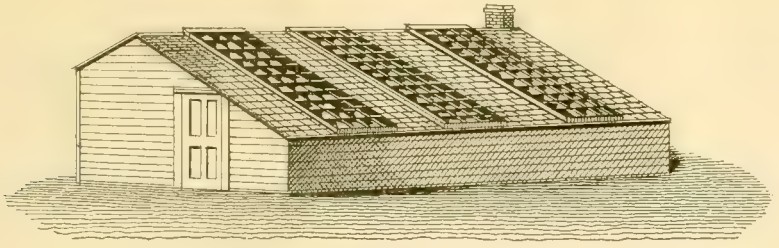
The American Beauty Rose.

[Read by Mr. George Sawyer before the N. J. Social Florists' Club Feb'y 25.]

Before beginning to plant see that your houses are properly cleaned after the old plants and soil have been taken out. With a hoe or trowel scrape the benches thoroughly so as to remove all loose soil and fungus which has accumulated during the past season; then give a good sweeping and coat of fresh lime to your benches to destroy all insects. See that cobwebs and loose dirt under the stages have been removed. This being properly done the house is ready for refilling and planting.

I find that the best soil is composed of good, turfy loam, say five to seven parts soil with one part manure, and, if it be heavy, add a little sand accordingly, also a liberal sprinkling of bone. In filling the benches I would advise having not over three and a half or four inches of soil. The planting should be done not later than June 15. The plants should be placed about fifteen inches each way. Press the dirt firmly around each plant, leaving it in the shape of a saucer that the plants may be kept moist until root action has started, and syringe them both morning and afternoon on bright days.

From the time of planting out the ventilators should be left open until the nights become cool, when they must be closed at night, but give them plenty of air during the day, unless the weather be adverse. If the soil appears to be somewhat loose it is best to give it a light trampling that it may be in a firm condition for mulching. About five weeks after planting a light mulching of thoroughly rotted cow manure run through an inch sieve may be put on and I think that will be sufficient until January, when another light coat may be applied. In April, if the plants are somewhat exhausted and need a little nourishment, a light dressing of nitrate of soda, say one part soda to three parts sand well mixed, is the best stimulant for this time of the year. When the plants are two feet high it is time to commence tying, using two canes to each plant, and lacing the plant between the canes, instead of dividing the plant into two parts.



Now is the time, while the plants are likely to be in a healthy condition, to keep down all insects which trouble the American Beauty, such as greenfly, red spider and rose bug. I think the best preventive of greenfly is to carpet the walks with tobacco stems, strewing them also on the pipes, and, if the fly still appears, use small bunches of tobacco stems on the beds. Red spider may be kept down by syringing at all times when the weather permits. The worst pest of all is the rose bug and the only way to destroy them is by picking them off. They can be found generally in deformed leaves and at the top of the canes, if canes are used. A disease which is very troublesome to this rose is "the black spot." This is caused very often by the houses being damp at night. Syringing early enough in the day that the leaves may be dried off when night appears is a great help to prevent its spreading. If the houses have been syringed in the morning and the weather turns cloudy start your fires so as to keep your houses warm; by so doing you will be enabled to leave a small crack of air on to dry things up. The houses should be kept at a temperature of 56° to 58° on cold nights, 58° to 60° on mild nights, with 75° during the day in bright weather.

Eastern New York.

Your correspondent ran short of news items at home, and for the good of his health and let us hope for the benefit of a few of your readers, started out to see how a few of his friends in the oil region were prospering. The first stop, 40 miles from Buffalo, was made at Dunkirk, a little city that exists because the Brooks locomotive works are there.

Close to the railroad station is the establishment of Mrs. W. H. Edwards, who has four houses, each about 60x18. Two of the houses are devoted to roses and the remainder to miscellaneous stock to supply her local trade. The business Mrs. E. does is out of all proportion to the size of her houses. She is called on to fill orders from many surrounding towns and for a hundred miles up the railroad lines, her ability as a floral artist is well known. Across the street on Central avenue are the greenhouses of Mr. G. Gibson, doing a general business.

A ride by electric car three miles south on a country road brings us to the beautiful village of Fredonia, chiefly noted for its grapes, schools and wealthy residents. There I found three florist places. Miss Denton has one large house and grows a mixed collection of plants and flowers and does a good business. She also cultivates several acres of fine land for the raising of choice and select strains of flower seeds. While not attempting to grow a general collection the sorts she does harvest can be depended on as the purest of their kind. Mr. Wilbur, in the southwestern part of the town, has four well built houses, two of them used for early vegetables and the others for carnations. He has the finest bench of Silver

THE FIRST GREEHOUSE ERECTED IN CHICAGO.

Spray I have seen this winter, loaded with buds and flowers and excepting a little red spider through want of syringing, in perfect health. Mr. Wilbur grows several other varieties, but the money is in the Silver Spray. Mr. David Scott has very recently leased the houses of Mr. E. Beebe (one of Buffalo's former architects). He has two large well built houses adapted to grow anything and no doubt they will soon be well filled.

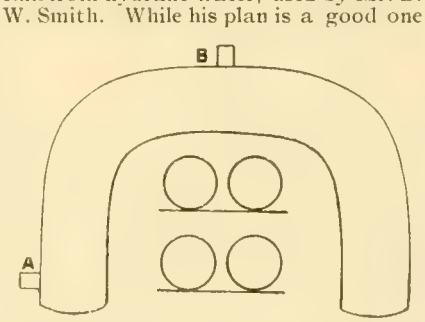
A sixteen mile ride on the Lake Shore railroad brought me to Westfield, now famous for its Keeley Cure institute lately located there. I conversed with several of the patients at the hotel and a bright intelligent lot of men they are. The "Cure" is spoken of in no joking way in Westfield. I learned there were no florists among the patients. Perhaps they can't afford it. Seventy-five dollars for three weeks besides hotel expenses is beyond the means of the average "health broken" florist. They go four times a day to the institute to receive "a shot" and spend the rest of the time as they choose.

But I didn't go there to write up or attend the gold cure. I went to see Mr. Gustavus Schoenfeldt, the well known florist of Westfield. His place is finely situated on the main street of the village, the old wagon road from Cleveland to Buffalo. Mr. Schoenfeldt has eight houses averaging 75x16 feet and all runnning to a central house. Detached from these is a violet house 100x12. Mr. S. makes a specialty of roses (hybrids as well as teas) and carnations, all looking well, but many other things are grown. In one of the houses are two large M. Niel roses planted out and trained over the paths, bearing immense crops of these rich old flowers. Mr. S. has for years been uniformly successful with violets, and was so this year till about the middle of January, when he met with trouble which sorely perplexed him. But he has discovered the cause. Down deep in the heart of his healthy fine foliaged plants are hundreds of greenfly. He has fumigated repeatedly, but the smoke don't reach them. The leaves are large and healthy and Mr. S. feels sure there is no other cause of failure and added that on a visit to Rochester, N. Y., a few days ago, he saw violets at several places with exactly the same trouble. Mr. Schoenfeldt has purchased six acres of land a little further out of town, has built a residence and will within two years remove the whole of his plant to his own place.

Before leaving this pretty and interesting locality allow me to say a few words about a great industry that many of your readers are strangers to. Everything here is grapes, all other crops are secondary. The grape growing region extends from Silver Creek, Erie Co., N. Y., to Harbor Creek, Pa., a distance of about 70 miles, with an average width of four miles along the south shore of Lake Erie. The acreage I did not ascertain, but there were over 1,000 car loads shipped from here last fall. Each car contains about 3,000 baskets. Only the damaged fruit is converted into wine. The producer receives about 1½ cents per pound. 95 per cent of all the grapes grown are the old reliable Concord. Old residents told me that in many years 2° below zero was the greatest freeze they had seen and seldom any frost till November.

From here I took the train for the oil towns, of which I would like to say something in your next. G. S.

The First Greenhouse in Chicago.



We present herewith an engraving of the first greenhouse erected in or around Chicago, from a drawing kindly furnished by Mr. John Goode, now the oldest living florist in that city.

This house was located at the northeast corner of Dearborn avenue and Division street, on the north side. Mr. Goode thinks it was built about 1835 or 1836, as it had been standing 9 or 10 years when he came to Chicago, in 1845. It was built and owned by a man by the name of Thomas. Mr. Goode cannot recollect the initials, but thinks his first name was Henry.

As seen in the engraving the roof is only partly of glass, three sash admitting light on the south side, the short span to the north containing no glass whatever. It is interesting to note that the three-quarter span style of roof for a greenhouse was in vogue as early as in the thirties.

Tempering Hydrant Water.

I noticed in the FLORIST for February 11 a description of a device for taking the chill from hydrant water, used by Mr. B. W. Smith. While his plan is a good one

and valuable, I think a better plan may be recommended, that will be available for both steam and hot water heating, and for those who use water from the hydrant or from elevated tanks.

My plan is to make a long saddle boiler of galvanized or light boiler iron that will arch over the heating pipes as shown in diagram. It can be made of sufficient capacity to hold 20 barrels of water, and this quantity will in a few hours become warm if over 4-inch hot water pipes. Connect at A with your supply pipe and draw off at B. Holding 20 barrels this will often serve you when your fire is out, and with steam heating you frequently wish to water on bright days when you need no steam heat in the houses. With this arrangement the water can not well become too hot and you can use up the whole 20 barrels, as of course the cold water coming in at the bottom will always keep the warm water at the top. C. B. W.

Boston.

The downward tendency in prices has been arrested and the overstock noted last week is not now apparent, the weather having been steadily cold and very stormy and not calculated to hasten the production of flowers.

There has been considerable funeral work going on and this, too, has aided in sending the price of white carnations back to $2 and $2.50 per 100. Good roses are also in short supply and bring $6 to $8 for average run of salable buds. Jacqs and hybrids are not plenty and as a rule but little can be said for the quality of those offered at present. Bulb stuff still moves slowly, but lily of the valley is selling much better than one week ago, and Harrisii lilies bring $8 per 100, the quantity coming in being much reduced.

Violets are too plenty, but as long as the weather remains wintry the quality will be good. There are a good many yellow English primroses coming in and they are very popular for corsage wear. They are put up in little bunches with a fringe of leaves in the same manner as violets and bring $1.50 per dozen bunches. Heath is quite plenty and of excellent quality. Asparagus has been very scarce but is now obtainable, although as yet rather soft and immature. The steady severity of the weather, being unexpected, makes the timing of Easter stuff somewhat of a problem.

Growers are not so sure now of some things as they were and some of those who were frightened by the lateness of the celebration this year begin to feel hopeful. The unusual weather has had a bad effect upon the prospects for the spring exhibition which opens at Horticultural Hall on March 22. Many of the bulbs intended for the show will not be in flower, and unless a warmer temperature should be experienced there will be great difficulty in moving azaleas and other large plants.

Jackson Dawson has been awarded a Certificate of Merit by the Mass. Horticultural Society for a new seedling rose, a hybrid between rugosa and Jacqueminot. It is regarded as the finest hardy single rose ever produced, the flower being very large and of a color rivaling if not excelling the Jacq. Habit robust like the rugosa.

Francis Brown Hayes, of Lexington, has had a beautiful solid silver cup made for a special prize to be offered through the Mass. Horticultural Society at the rhododendron show next June, for the best 12 varieties of hardy rhododendrons, 50 trusses. The vase is of graceful shape and will make a fine parlor ornament for the winner.

President W. H. Spooner gave a reception to the officers, committees and other members of the Mass. Horticultural Society at his new residence at Jamaica Plain on the evening of March 17. The occasion was informal and was highly enjoyed by the guests, Mr. Spooner proving himself to be a most hospitable host.

The garden committee of the Society

made a trip on Wednesday afternoon to the greenhouses of Mr. C. V. Whitten, where they inspected and admired the luxuriant display in the rose houses under Mr. Cotter's care. Mr. Whitten being unavoidably absent the entertainment of the visitors fell to Mr. Cotter's lot, which is equivalent to saying that it was well done.

On Saturday March 19 the same committee went on a similar errand to the greenhouses of Dr. C. G. Weld, at Brookline.

Mr. Finlayson, after ministering to the wants of the inner man, escorted the visitors through the greenhouses. The plants always look well here. Just now the cinerarias are in their full glory and are a sight worth seeing. The cyclamens are marvelous plants. No finer specimens could be imagined than many of them are. The show house is gay with mahernias, genistas, eriostemons and acacias in variety. A bed of fine Paisley pinks is just coming into bloom. The cattleyas, which were badly infected with the grub last year, are entirely free from the pest and are making healthy growths.

The essay before the Hort. Society on March 19 was by Mrs. F. A. Deane on the "Ethics of Flowers." Several members of the Executive Committee of the S. A. F. were heard to express the wish that Mr. Dan Long, of Buffalo, had been present. Mr. Welch listened intently to the lecture and is now well equipped to argue ethical points with Mr. Long, having obtained an indefinite "extension of time."

Mr. A. P. Calder exhibited some beautiful blooms of Anemone coronaria and was awarded a gratuity therefor.

Dr. Sereno Watson, the distinguished botanist and Curator of Harvard University Herbarium, died at Cambridge on March 9, aged 65 years. He was born at East Windsor Hill, Conn., and was a graduate of Yale College. His younger days were spent in the study and practice of medicine, all the time paying considerable attention to botany, to which in later years he gave his whole time and attention, and in the pursuit of which he traveled extensively over the North American Continent. Since 1870 he has passed most of his time at Cambridge in the study of North American Flora and has written many important botanical works separately and in conjunction with Prof. Asa Gray. On the death of Prof. Gray he became curator of the University herbarium and continued the editing of the unfinished "Synoptical Flora of North America." He was botanical editor of the earlier volumes of the Century Dictionary. His revision of Gray's Manual was issued two years ago.

The bowling club held its regular meeting on Wednesday evening at the Brookline street alleys. There were about 18 members present, and there is every indication that the newly formed organization will become very popular. Some very fair scores were made, although these alleys are far from good.

Philadelphia.

The monthly meeting of the Penna. Horticultural Society held March 15 was very interesting, the attendance being above the average. A great deal of interest was manifested in the coming spring show, which promises to exceed any of its predecessors. The carnation men are active and a very fine exhibition of these flowers is promised.

The feature of the evening was the paper on orchids prepared and read by Mr. Edwin Lonsdale. It was received with marked attention. A vote of thanks was given to him for his admirable essay, which was pronounced one of the best papers read before the society for a long time.

In addition to the entries for plants and flowers there are quite a few who will have exhibits of mushrooms. A number of private gardeners and florists are devoting a good deal of attention to the mushroom. There has been this season a ready sale for all that came to market, the wholesale price being 75 cents a pound.

Tomatoes are also forced by some and are said to be a paying crop, bringing about 50 cents a pound. There being demand for them at these prices even as late as May, they make a good crop to replace some early winter failure.

Although business has been very quiet the past week, prices have not fallen much. Carnations have lost another quarter of a cent and they are now 2 for the best. Other flowers are about the same as last week.

Mr. Burton is cutting some very fine Brunners and Mr. Heacock has another house of hybrids just in, which promise well.

C. D. Ball is replacing three of his oldest houses with new structures, which are being built of brick and iron in the most substantial mannner. They are all 100x23 and will contain his finest specimens when completed.

Mr. Harris will soon commence another addition to his new place. A range of seven houses is to be added after the spring rush is over. His stock of rubbers is expanding at such a rate that more room has to be provided for them. Palms of various kinds are also grown in large quantities, but the "glut" seems as far off as ever.

Mr. Westcott, chairman of club house committee, has secured some very pretty water colors, which now decorate the walls of the club room. Among them are two fine marine views, which suggest "Barnegat" and the good time coming next summer.

Longinette rolled up 226 in a match game Saturday night. Anderson has been under the weather lately, being confined to the house with something like quinsy. He is on the mend, however, and hopes to be about soon.

The item regarding a change in business location of Messrs. La Roche & Stahl proves to be incorrect. This firm will continue at the old stand.

Washington.

Jasminum nudiflorum is just coming into bloom. It is very beautiful when in flower, hanging in great masses over the terraces and curbings about the capital grounds and other parks. Visitors to Washington have often been delighted, then disappointed with this shrub, which, although so beautiful at times, is only an occasional gem, its extremely early flowering subjecting it to such danger from frost that it is only about one season out of three in which it is to be seen at its best.

The winter just passed has been a very severe one on all magnolia and other evergreen foliaged trees and shrubs. Alternate raining and freezing has disfigured them badly.

Mr. Smith calls attention to the power of extensive advertising as illustrated in the case of the Manettia bicolor, which has been grown in Washington for the past 37 years, but was comparatively unknown until recently, when it has sprung into great popularity and has become a veritable "people's plant."

Mr. Smith recommends highly Yucca gautemalensis as a decorative plant for florists' use in winter. It is very tough and stands handling and change of temperature well.

The roses at J. R. Freeman's houses are in splendid condition. Mermets, Wabans, Brides and Meteors all bear evidence of careful culture and generous feeding.

At Strauss & Co.'s there will be an immense cut of roses for Easter. The number of varieties grown here is very large, but Perle, Wootton and Mme. Pierre Guillot occupy the greater part of the extensive range of houses. The Perles are in full crop. The Guillot seems to be a great favorite with the Washington people, judging by the quantities of this variety which are disposed of daily at Strauss & Co.'s store.

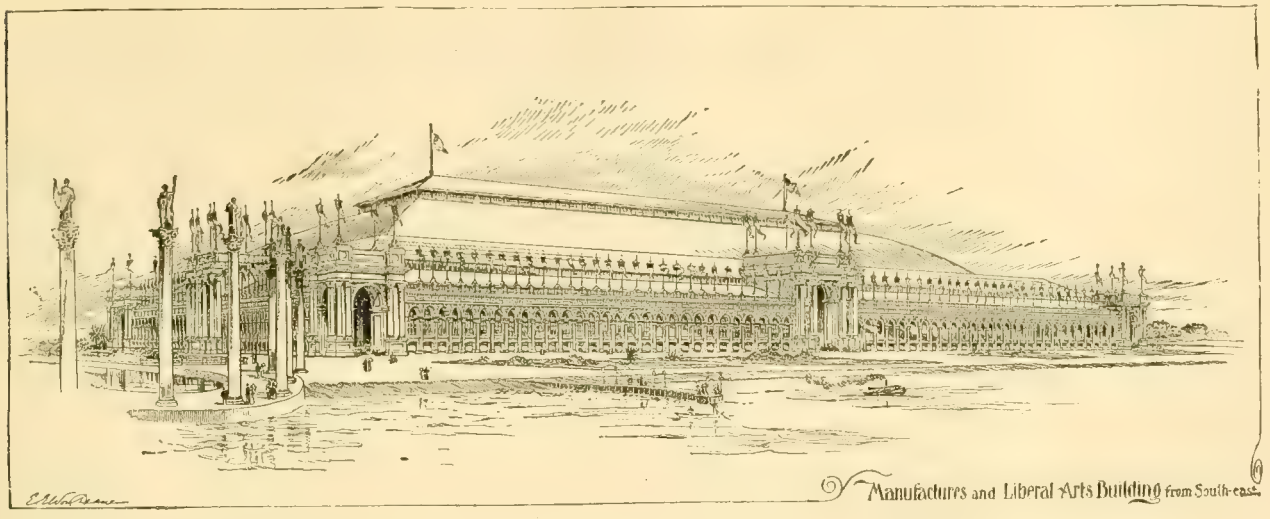
Clark Bros. have a good stock of Asparagus plumosus in their houses. They grow the variety nana in preference to the true plumosus. They claim that it does not send up a long base stalk for several feet before breaking into foliage, as is the case with plumosus, and the fronds being smaller make more graceful strings for festooning.

They have a large stock of young Areca lutescens. These they grow on shelves close up to the glass, a method which they claim hastens the growth of the plant and at the same time keeps it stocky.

New York.

The state of the trade during the past ten days has caused a feeling of Lenten penance among the florists; business is extremely dull, flowers quite plentiful. Prices really compare quite favorably with those of previous years, especially in roses. American Beauty for example, though average flowers run from 10 to 40 cents, really fine blooms will bring 75, a pretty good price for the middle of March. Meteors have been a great success this season, but they are now being displaced by Jacqs; no other red rose ever really competes with this old favorite.

Daffodils are plentiful and very extensively used; they are always popular in the early spring. Lilium Harrisii is a positive drug; it was never more plentiful. It is a question whether it will be quite so plentiful just at Easter, though the sales at that season are so very large that it always takes a tremendous quantity to make any impression on the market.



A good deal of genista is in full flower already; one florist's window was especially noticeable recently, being filled with a mass of this plant, great bushes of yellow bloom. Another attractive window had a carpet of cattleya, eucogyne and adiantum with a tall center vase of bougainvillea, odontoglossum and phalænopsis. Orchids are quite plentiful and much used.

Some extremely fine lilac was noted at Siebrecht & Wadley's; it is a new French variety with unusually large flowers.

Wm. Elliott held his first auction for the season March 18; hardy roses, shrubs etc. Things went very slowly, doubtless owing to the abominable weather, for the heavy snowfall and ensuing thaw fairly put New York afloat. Bad weather usually depresses a plant auction, and the same cause seriously affects the flower trade.

Mr. Samuel Henshaw, late of Thompson, Conn., has bought a home at Port Richmond, Staten Island, and intends to settle down there.

The March meeting of the New York

MANUFACTURES AND LIBERAL ARTS BUILDING, WORLD'S COLUMBIAN EXPOSITION

Florists' Club was very well attended. The club is now making a strong effort to secure suitable rooms for a permanent home. At present they are very seriously inconvenienced, not only at the regular meetings but also in showing proper courtesy to their many guests. Suitable quarters being secured they will then have a place in which to receive visiting committees from allied bodies; at present it is very difficult to get any settled place for such meetings.

Another matter discussed by the club was that most mischievous bill now before Congress prohibiting the transportation of plants suspected of disease or parasites. Men in the trade here, as everywhere else, recognize the absurdity, as well as injustice, of such a measure, which would practically prohibit the shipping trade. Indeed, a suburban grower might find it impossible to take a load of stuff into the city since the ferries would be practically closed to him; there is no end to the mischief that would be caused by a strict adherence to the law. A committee was appointed to make an organized protest against the bill.

Mr. Ed. Jansen was in London the past week and is now in Paris, where he will stay several weeks looking up the Easter trade.

The cold weather of last week was of immense value to growers of Easter stuff, and florists too.

Manufactures Building at the World's Fair.

Notable for its symmetrical proportions, the Manufactures and Liberal Arts Building is the mammoth structure of the Exposition. It measures 1,687 by 787 feet and covers nearly 31 acres, being the largest exposition building ever constructed. Within the building a gallery 50 feet wide extends around all four sides, and projecting from this are 86 smaller galleries, 12 feet wide, from which visitors may survey the vast array of exhibits and the busy scene below. The galleries are approached upon the main floor by 30 great staircases, the flights of which are 12 feet wide each. "Columbia avenue," 50 feet wide, extends through the mammoth building longitudinally, and an avenue of like width crosses it at right angles at the center. The main roof is of iron and glass and arches an area 385 by 1,400 feet, and has its ridge 150 feet from the ground. The building, including its galleries, has about 40 acres of floor space.

The building is in the Corinthian style of architecture, and in point of being severely classic excels nearly all of the other edifices. The long array of columns and arches, which its facades present, is relieved from monotony by very elaborate ornamentation. In this ornamentation female figures, symbolical of the various arts and sciences, play a conspicuous and very attractive part.

Toronto.

The Gardeners' and Florists' Association had a lively meeting on the 15th. inst., a good crowd being present. The chrysanthemum prize list was finally gone over and settled. It will be printed and sent out for the first time at once. Another copy is sent out shortly before the show takes place.

Botanic Gardens were also up for discussion, on a motion to appoint a committee to consider the best way to make the government take the matter into consideration. Mr. A. H. Ewing read a paper containing a plan for making a beginning. The honorable member for Hamilton seemed to think that the paper was a piratical production and that the idea of Botanic Gardens for the Province of Ontario originated in his "ambitious city;" in this he was undeceived by Mr. Vair who stated that the matter had been talked about in Toronto 20 years ago and at various times between then and now.

What this Association wants is an assurance from the government that they will do something towards establishing Botanic Gardens and in order to get this assurance it would be well if all the clubs in the Province combined; then united strength might accomplish something; singly, they will get nothing but promises and disappointments. Governments want votes, and will not concede anything unless they see a fair prospect of a good return.

The motion carried and the committee was formed. It will deliberate shortly and bring in a report to the next regular meeting.

Through the kindness of Alderman Hallam the Association will this evening (18th) be allowed to look over all the Horticultural works in the Public Library. It is reported that many very valuable books will be on view and a great treat is expected.

"Chrysantum" is not in it; it would be reduced to "tums" right away. "Chrysm" is ahead yet. E.

Baltimore.

"Tis an ill wind that blows nobody good," might well be said of the weather this week. Worse weather from a grower's standpoint it could scarcely have been, the few glimpses of sunshine only serving to heighten by contrast the howling melee of wind and snow and sleet that succeeded them and turned the streets into shallow rivers of slush. "Genuine St. Patricks day weather," said the old fellows, with a wise shake of the head; though it may be questioned whether the saint ever experienced anything remotely resembling it. Bad as it was though, it made trade appreciably better in the stores on market days, and that means pretty much all six, for there is a market somewhere in town every day, and, when the weather is fine the stalls of flowers and plants are so tempting in their color and perfume that few flower lovers can resist the temptation to get a bunch of violets or pansies or a little plant or bouquet as they go by getting their marketing. If the weather is bad the stalls cannot be used and the buyer gets what he wants at a store. To be sure in many cases he does not get flowers at all, but there is enough to make the difference between bad and fine market days very conspicuous in the sales of stores that are at all near the market.

If "there's a sweet little cherub that sits up aloft" to look out for poor Jack, there must be another to look out for the poor florist man, for what else could put it into people's heads to have such and so many uses for flowers during this penitential season. Even St. Patrick was considerate enough to have his day come in just when most needed, and when any other banquet and jollification except one in honor of a national saint would be inexcusable. As it was our Irish-American citizens celebrated the day in fine style, by wearing real or imitation shamrocks through the day and by gathering to a grand banquet at night, where, though the decoration was not very elaborate, a great deal of flowers and smilax were used on the tables, and at least one florist's heart was made lighter and his pocket heavier as a result.

Smilax continues very scarce, in fact there seems to be a sharp demand for not only that but everything else offered. Prices remain the same except that violets and narcissus are lower, and when the sun peeps out the market will probably be glutted with both.

MACK.

Cincinnati.

On March 12 was held the 41st meeting of the Cincinnati Florists' Society. This was a well attended meeting, at which there were some new members elected and other applications for membership received. The principal business of the meeting was the nomination and election of a special committee to take charge of the coming chrysanthemum exhibition. This committee is composed of Messrs. Albert McCullough, chairman; H. L. Sunderbruch and Frank Huntsman, and through the efforts of these gentlemen it was found necessary to call a mass meeting of the florists of Cincinnati and vicinity. The call was issued and the meeting called to order by the president of the Florists' Society at the establishment of H. L. Sunderbruch the evening of March 19. Mr. McCullough, as chairman of said committee, stated that they had met several times during the week and had made progress enough to know that the exhibition must and would be a grand success and that the exhibition would be conducted under the auspices of the Cincinnati Florists' Society. Also that the proceeds be divided between two charitable institutions, these institutions to interest their friends and the public, thereby insuring a large attendance and general interest. The official premium list will be issued the coming week, and the aggregate will amount to not less than $2,000. To give a little idea of what we intend doing will state that we will offer as first premium for best seedling chrysanthemum, $100 and a gold medal; for the best 50 varieties, cut blooms, not less than three of a kind, 1st $150, 2nd and 3rd in proportion. The money to pay these premiums is already guaranteed, the florists themselves giving a very handsome starter. Everybody has taken an interest. Our growers are getting a rapid move on themselves and we can already see one of the grandest exhibitions of chrysanthemums and cut flowers in general that has ever graced the halls of any western city. We trust that our florist friends throughout the country will not be backward in coming forward and securing one of our premium lists and that they will also exhibit in competition with our home growers. "Of course our home growers are very hard to compete against," but our premiums are open to the world and we trust to see many foreign entries upon our books, guaranteeing that they shall receive the same fair and square treatment as our boys at home.

At this meeting the boys were treated to a very tempting spread, consisting of all the delicacies of the season, which was served in grand style, and when the motion was made that we take a short recess for refreshments, it was unanimously carried.

Mr. Bock of Hamilton, O., had on exhibition a very handsome rose, a sport from the Perle, and which certainly is an acquisition.

Mr. Henry Schwartz also had on exhibition several seedling carnations which were magnificent specimens, consisting of white, red and pink shades. These will also be heard from later.

Trade during Lent has been quiet and is felt considerably by our home florists. The wholesale trade is keeping up nicely and the prospects for Easter are very flattering. Let me once more impress upon our florist friends throughout the country that we want you with us in November next.

The adjacent property owners who were objecting to the erection of the Jabez Elliott flower market in accordance with the Holroyd bequest have been denied the injunction prayed for and the building will now be erected. The plans provide for headquarters for the Florists' Society.

E. G. GILLETT, Sec'y.

Buffalo.

There are just enough giddy folks in Buffalo to keep small entertainments and weddings going even if it is Lent, and business has not by any means fallen flat with that "thud" that is reported from some larger cities. The funeral this week of our ex-Chief of Police was the occasion for a large and costly display of designs. Quite a different event was the two nights' stand of Sarah Bernhardt at the Star Theater. Both evenings she was the recipient of many fine floral pieces, even if the "divine Sarah" did have to play to half empty houses. Last week one of our largest and most popular dry goods stores celebrated the 25th anniversary of their start in Buffalo, and a most elaborate decoration they made with palms and flowering plants on the occasion. These various events keep the business moving. Some fine plants of Azalea mollis are forced here this spring. They are very attractive and sell well, but I doubt if they are as good a house plant as A. indica.

Mr. McMillan, our park superintendent, is busy raising his own stock for the park beds this year. In purchasing several hundred acres of land for an extension of the park system to be known as the "South Parks," they acquired several small greenhouse establishments. In the past the bedding plants used in the park were purchased from different growers who will now lose a good order. But the city demands more flowers in her fine park, and it is hoped by many citizens that Mr. McMillan will in the future give us more "landscape gardening in high colors."

I have thought often lately during the month of freeze and thaw—zero at 5 o'clock in the morning, beautiful bright day following, perhaps up to the freezing point at noon—that a good question for the box at our annual meeting would be how to make a greenhouse door that would open and shut during such weather without a crowbar, a kick, salt or profanity. I have not yet seen a door that filled the bill, and thousands of latches and locks are broken every winter, besides the commandment.

Some of my neighbors may be building soon and I would like to call their attention to the article by Mr. J. D. Carmody. He says "on houses running north and south the ventilators should be located on the west side, but if east and west place them on the north side." With great respect for Mr. Carmody's experience I must say that his instructions will never do for Buffalo; 25 days out of 30 our wind is from the west and north, so we want the ventilators on the east and south; and what is more, many days the sun shines brightly with us while yet we may have 15 to 20 degrees of frost, the north and west side remaining frozen, and if the ventilation was situated as Mr. C. advocates, on such days we should not be able to ventilate at all. In both styles of houses my ventilators are the exact opposite of Mr. Carmody's theory and I am confident it is the thing for Buffalo or its latitude.

G. S.

St. Louis.

These are dull times for the suburban florist; his only mainstay is the never failing funeral orders. This is not the case with the down-town man, who does so much "passing" trade that the almost general inactivity usually felt at this time does not affect him much. There is promise of a good stock of Easter stuff, especially Easter lilies.

Mr. Connon is growing some extra fine Baroness Rothschilds. Some of the finest pansies in this city can be found growing at J. Van Camperhoudt's place on St. Louis avenue. Mr. R. Tesson is sending in some more of his wonderful Beauties.

Mr. R. Frow favored your correspondent with his first Jacq. He is just getting over a very severe attack of La Grippe. Mr. Frow was the first florist in this city to use a water tank for forcing valley. It is an iron tank, in size the same as the forcing frame under which it is placed. The water is heated by steam night and morning until it reaches 90°. This very simple plan has been used by him for four years and he is more than satisfied with its efficiency.

Sanders & Beneke filled four diamond shaped baskets with pansies and pink roses for a diamond wedding last week.

W. A. Hanft & Co. say that the statement that they have abandoned the wholesale for the retail business is incorrect and that they are still wholesalers.

J. W. D.

Chicago.

There are rumors of many changes among the florists on Wabash Avenue May 1. Rents have been going skywards of late and some of the figures named by landlords are "out of sight" as far as florists are concerned. Only those with long leases are apt to hold forth at their old locations.

Among recent visitors to the city were Harry Baversdorfer, Philadelphia; J. L. Russel, Denver; Harry Balsley, Detroit; G. Kruyff, Sassenheim, Holland.

Mr. John Lane starts soon for Southern California where he will remain for an indefinite period in search of health.

Wholesaling Cut Flowers.

Under the title "A New Departure" the Wisconsin Flower Exchange, Milwaukee, Wis., has issued a circular reviewing the difficulties attendant upon the effort to do exact justice to both consignor and customer and proposing to in future adopt the following plan:

Now we propose to adopt a plan which will put the retail florist and the fakir on the same footing, which will, of course, starve out the fakir and enable the grower to feel the pulse of the market daily. It is quite simple. After March 1 we will have a blackboard in our office quoting all such flowers as we receive. The price will be made each day at 2 p. m., which will hold good for 24 hours. It will be our aim to regulate prices so as to make supply and demand even. If flowers sell out clean before 12 o'clock, we will put them up a notch for next day; if there is a surplus, lower a trifle. Cards will be sent daily to all our growers and such florists who wish to have them, so that they can see every day how matters stand. We know that this will have the effect of keeping hundreds of flowers out of the waste barrel and putting them into the florist's window, where they will advertise and help create a demand, which in the long run, helps all parties concerned excepting the fakir, unless he rents a store and goes at it like a good citizen. It is simply regulating the price daily according to the supply and demand, which places the burden of fluctuation on the *weather* and the *public*.

News Notes.

SHARON, TENN.—A horticultural society was recently organized here.

MILWAUKEE.—The Wisconsin Flower Exchange has increased its capital stock to $3,000.

DENVER.—C. R. Gallup has returned from a trip to New Orleans where he "took in" the Mardi Gras festivities.

COLUMBUS, O.—The February meeting of the Columbus Hort. Society was devoted almost entirely to floriculture. Some very interesting and valuable papers were read.

ZANESVILLE, O.—J. B. Wilson has closed the sale of a portion of the Koethen greenhouse property on Putnam avenue for A. V. Smith to Julius Frank. Consideration $2,500.

SPRINGFIELD, MASS.—Mr. H. Grout will add another new house, 100x54, ¾ span, for carnations the coming summer. Grace Wilder does better with him than any other carnation he grows.

SANTA BARBARA, CAL.—Preparations are being made for a mammoth floral carnival April 19 to 24. There is talk of running special trains from Boston, New York and Philadelphia direct to this city for the occasion.

MINNEAPOLIS.—The Minnesota State Horticultural Society was incorporated March 14. The society recently celebrated its 25th birthday. The "Minneapolis Lawn Mowing and Garden Decorating Co." is the name of a new organization.

MADISON, WIS.—At the annual meeting held here the State Horticultural Society elected the following officers: President, M. A. Thayer, Sparta; vice-president, L. G. Kellogg, Ripon; secretary, B. S. Hoxie, Evansville; treasurer, Mrs. Vie H. Campbell, Evansville; corresponding secretary, Carl H. Potter, Madison.

SYRACUSE, N. Y.—Ex-Alderman P. R. Quinlan, the florist, has been elected city treasurer. The office is worth $7,000 a year and the term is for three years. Mr. Quinlan furnished bonds in the sum of $500,000. His many friends are congratulating him upon his success. There are not many florists who strike oil like this.

COUNCIL BLUFFS, IA.—W. H. Foster, the well known florist, mysteriously disappeared about two weeks ago and has not been heard from since. He left the house one evening to go to the greenhouses and that was the last seen of him. He had been a resident of this city for 30 years. L. A. Casper is on a trip to Denver and Salt Lake City.

BUCKSPORT, ME.—There is a good story going the rounds at the expense of Fred Moses, the florist. It seems that in a Bangor Sunday school recently a little girl asked her teacher where the ten commandments came from. Her teacher said Moses gave them to the Jews. "Oh, I didn't know Moses gave them," said the child, "I know him, he sells flowers."

GERMANTOWN, PA.—The display of plants and flowers at the meeting of the Germantown Horticultural Society on March 10 was the largest of the season. An interesting address was delivered by Prof. Thos. Meehan. Premiums and gratuities were awarded for azaleas to Andrew Muldoon; for cinerarias to Matthew Braeken, Albert Woltemate, Frank Smith and M. Walsh; for hyacinths to M. Sammon; for cattleyas to John Kirby; for foliage plants to John Brown; and for collection of orchids to A. Woltemate.

SAN FRANCISCO.—At the semi-monthly meeting of the Florists' Club of California March 11 most of the evening was devoted to the discussion of California's floral exhibit at the World's Fair. It was the general opinion of those present that no attempt should be made by California to compete with the Eastern States in a general floral display, owing to our great distance from Chicago and the shortness of the time for preparation. The proposition to exhibit native plants, trees and bulbs was, however, heartily indorsed and methods of preparation and transportation were discussed at length. In cut flowers it was the opinion of the club that with properly constructed refrigerator cars violets, carnations, calla lilies, sweet peas, tuberoses, gladiolus, etc. could be safely transported. An election of officers will take place at the meeting to be held on March 25th.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By experienced gardener, to take charge of private place: married; best of references. H R, 6039 South Park Court, Chicago.

SITUATION WANTED—By married man, aged 28, as gardener, private place preferred; references good from last place where I worked 5 years. Address C L, care American Florist.

SITUATION WANTED—By thorough practical English gardener, on private or commercial place, is well up in landscape work. Highest references. F. PRIDEAU, 2½ Melrose St, Lawrence Mass.

SITUATION WANTED—By a German gardener and florist, on a private place; have had 25 years experience in the business, 9 of which in this country. Address WM. WIGGERHAUS, care Mrs. C. Bruck, 1743 York Place, Chicago.

SITUATION WANTED—By a first class gardener, as manager on large private place; have 14 years experience in all the branches of the horticultural trade; best of references from leading places of Europe and this country; married, no children. Address H C, care of Vogt, 30 City Market, St. Paul.

SITUATION WANTED—By an A 1 all round florist and gardener, as foreman, age 33, single; wages $75 per month; no fossilized places need reply. ALPHA, care American Florist.

SITUATION WANTED—By a first class florist, 25 years of age; excellent knowledge in growing roses, carnations, cut flowers, propagating all kinds of forcing stuff; well up in design work and decorations; west and south preferred. W E, Salt Lake City, Utah.

SITUATION WANTED—In private or commercial greenhouse establishment, by young man, 27, single, English, thoroughly understands the florist business in all branches, orchids, ferns and palms specialty; can furnish excellent references; 15 years in business; nothing but good place wanted. L J, care American Florist.

WANTED—Not later than April 15, a good all round single man; give references and state wages. Box 94, Morrison, Ill.

WANTED—To lease or buy several greenhouses, some ground, with or without dwelling, near good market. W J, 95 Wakeman Ave, Newark, N. J.

WANTED—A good reliable man for general greenhouse work. Give references and state wages expected. ALMA S. PATTERSON, Fort Scott, Kan.

WANTED—Florist for all kinds of greenhouse work; married man preferred; wages $40 per month. W. W. GREEN & SON, Watertown, N. Y.

WANTED—A good, reliable florist for all kinds of greenhouse work—married preferred. Wages $40.00 per month. Address REFERENCE, P. O. Box 84, Indianapolis, Ind.

WANTED—A good mechanical florist, as we are building a large plant; married or single; $35 per calendar month and board. ANCHORAGE ROSE CO., Anchorage, Ky.

WANTED—Gardener for private place. Must thoroughly understand flowers and laying out grounds. Married man preferred. References required. 552 Dearborn Ave., Chicago.

WANTED—Good man for general greenhouse work on commercial place; experienced young man preferred. Address, stating age, experience, wages desired etc., etc., ASSISTANT, P. O. Box 592, Cincinnati, Ohio.

WANTED—Young man, single, to work in flower garden, must be sober, honest and competent, to sell flowers and plants; state wages wanted. Address C. F. WEEKS, Hot Springs, Ark.

WANTED—To purchase second hand Hitchings boiler in good condition, either No 17 or 19; also 3,000 feet of 4-inch pipe. Address giving lowest cash price. R. H. SANBORN, Geneva, Ill.

WANTED—All florists, seedsmen and nurserymen to send me at once their catalogues, trade lists and all gratuitous printed matter in this line. Gladioli lists especially desired. ALFRED E. BAKER, Box 2672, West Chester, Pa.

WANTED—A good rose grower who has had experience in growing other stuff; must be honest, sober and respectable; best of reference required. Address stating wages wanted. I. W. & T. W. WOOD, Chase, Allegheny Co., Pa.

WANTED—Florist, single man as assistant, for all kinds of greenhouse work. Size of place 20,000 square feet of glass, for roses, carnations, and general florist stock. Cut flower store connected with greenhouses. CHAS. FRUHH, E. Saginaw, Mich.

WANTED—Immediately, a sober, reliable man to assist in greenhouse work, single preferred; must speak English, wages $20 per month with board, steady employment to right man with prospect of a rise. THOMAS GORDON, Mt. Clemens, Mich.

WANTED—A young man as salesman for a Floral department in a large dry goods store. Hours 8 to 6 and no Sunday work. Must have had experience in design work and decorating. Apply by letter giving particulars and reference to, BROWN, THOMSON & CO., Hartford, Ct.

WANTED—About April 15, young, single man who can grow roses, carnations, mums, etc. for cut flowers, and who can help build and fit up new greenhouses. Must board with employer. State wages and give references. GEO. A. RACKHAM, 934 Gratiot Ave., Detroit, Mich.

FOR SALE—At a bargain, a florist's business in a thriving city near St Paul. Proof profits for 1891 over $1,300. For particulars address SELLER, care American Florist.

FOR SALE—Small greenhouse attached to dwelling house. Everything in good condition, and room for extension if desired. Will sell entire property. Address MRS. Z. M. CHURCH, 219 Terrace St., Janesville, Wis.

FOR SALE—Lot 70x170 ft. with 8 room house, plant of four greenhouses, with good spring stock, fine local trade. If combined with nursery a splendid opening. Less than 7 miles from heart of Chicago. Price $6,200. Address Box 543, Austin, Ill.

WANTED.

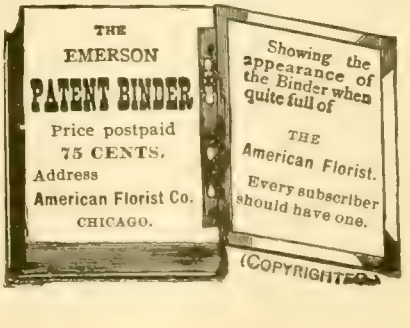
Landscape gardener for summer season. Must be competent to lay out new work. Single man preferred. Address, with references and experience had, to

H. J. BROOKS, Supt.
ELGIN, ILL.

FOR SALE.

Nine Green Houses containing about 10,000 feet of glass, stocked with carnations and heated by steam. Also grapery 80 feet long, recently built; about 30 acres of choice land, abundance of fruit of all kinds, large commodious house containing 15 rooms, including bath room, a new barn and necessary out-buildings, within 5 miles of Philadelphia and one mile from station. Will be sold on account of ill-health. Address I. LARKIN, Toughkenamon, Chester Co., Pa.

FOR SALE OR RENT.



Greenhouse property on East 14th St. very reasonable terms. 5,000 square feet of glass, mostly double thick. Houses well stocked with plants for spring sales. Splendid cut flower trade all the year. One house early lettuce, radishes, etc., nicely under way for spring trade. Steam and water heating. Five acres of land mostly set to grapes, berries, apples, etc., in good bearing condition. Dwelling house, barn and other outbuildings. Fifteen minutes from postoffice. Best shipping point and best location in the state. No other greenhouse within 45 miles. A good opportunity to make money. Everything goes at a bargain. Possession any time.

W. J. BIGGAR, FREMONT, NEB.

BOILER FOR SALE.

In good condition, 4½ ft. long, 4 ft wide, 17 3-in. flues. Will heat 1,500 feet of pipe.

WISCONSIN FLOWER EXCHANGE,
131 Mason Street, MILWAUKEE, WIS.

March Chrysanthemums.

Great, handsome blooms, six inches across and perfect in every respect are not very often seen in March, but two blooms sent us by Mr. J. A. Newby, Logansport, Ind., meet the above description.

Mr. Newby writes: "I send you two flowers of Chrysanthemum Alice Newby. The plant is a seedling grown from seed received from J. C. Vaughan last spring; it was planted out in field, and with a lot of others lifted along in the summer (to keep them from dying from the drought) and placed on bench in greenhouse in common soil, and no care whatever given looking to the production of specially large blooms. The plant grew bushy, about 18 inches high, and bore 32 flowers, none less than 5 inches across, in color a pure, waxy white, and lasting in good condition for a month. The first flowers were ready to cut November 10.

"I had topped the seedlings in early summer and raised some plants from the trimmings, two being from the plant noted. They were kept in pots, bloomed in November and stood in a carnation house for stock, where to my surprise they continued all winter to grow and throw crops of flowers like those I send. The carnation house is run very cool—from 40° to 45°—and the flowers when left to develop in that temperature came heavily shaded with pink. You will notice that those sent show quite pink, and they are much nearer white than they were a week ago. I brought the plant into more heat to see what effect the change would have."

ROSES.

A Chance to Triple your Money.

NOW READY. (Safe Arrival Guaranteed.)

50,000 ROSES, from 2-in. pots, $3 per 100; $30 per 1000.

Plant in 3 inch pots, and they will bring you from 10c to 15c each readily.

50,000 ROSES, from 3-in. pots, $5 per 100; $50 per 1000.

Plant in 4 inch pots and they sell readily from 20c to 25c each.

N. B.—Our stock is not forced nor are the plants long and drawn, but have an abundance of leaves and roots.

Varieties you can select from by the 100 or 1000, provided one or the other sorts is not sold:

Agrippina,
Archduke Charles,
Aline Sisley,
Archduchess M. Immaculata
Bon Silene,
Chas. Rovolli,

"COMMON Sense in Business Matters" is the title of a neat volume of 256 pages received from the publishers, Messrs. Voorhees & Rudd, Blue Island, Ill. The title sufficiently indicates the contents of the book, and it only remains to say that the subject has evidently been handled by a man who has had practical business experience instead of by a professional bookmaker. The usual trouble with this class of books is that they tell you everything except what you want to know. This seems to be an exception, and to treat of everyday business transactions and in a brief, concise way. The very full index will make it especially valuable for reference regarding the doubtful points that so often arise in the transaction of business. In addition to the other matter there are given a large number of useful tables, each handy to have at one's elbow. We have placed our copy among the books that we keep at hand for reference and this sufficiently indicates our opinion of its merit and value.

WEEDS.—Among the exhibits at the World's Fair will be a collection of weeds. Prof. Byron D. Halsted, of the N. J. State Experiment Station, New Brunswick, N. J., has the matter in hand and he has issued a circular asking for specimens of the worst weeds from each state. What a villianous crew he will have collected together. But such an exhibit will be of much interest.

Parks.

PITTSFIELD, MASS.—Onata Park, on the borders of Onata Lake, although as yet unimproved, is in its natural state a beautiful spot. It was the gift to the city of the late Abraham Burbank, an honored citizen. It contains about 40 acres. It is expected that steps toward development and improvement will soon be taken.

ROCHESTER, N. Y.—Rochester has three public parks. Genesee Valley Park on the upper Genesee River contains 372 acres; Seneca Park on the lower Genesee River contains 260 acres, and Highland Park on the range of hills overlooking the city contains 60 acres. The parks are not all finished yet. The roads and walks are only partly graded and a few of the trees set out, but when completed Rochester will have a park system of which she may be proud. F. L. Olmstead & Co., of Brookline, Mass., are the landscape architects, and Calvin C. Laney, of Rochester, is the superintendent in charge.

ALBANY, N. Y.—The annual report of Superintendent W. S. Egerton of the Albany parks makes a very favorable showing of the work accomplished during the past season and the plans for further improvement the coming season. Washington Park is one of the most beautiful of city parks. It is well laid out and planted with fine trees and shrubbery. Last summer the display of aquatic plants in the east end of the lake proved one of the greatest attractions for the public, and preparations are being made for a much larger planting of aquatics this year. The conspicuous labelling of the trees and ornamental plants is highly appreciated by visitors and will be more detailed next season. In Washington Park is located the Burns monument, one of the finest pieces of bronze work in this country. The total amount spent for park maintenance in 1891 was $26,730.

ATLANTA, GA.—L. P. Grant Park is so named in honor of the donor, who gave 100 acres of valuable land in 1883 for park purposes. It now contains about 144 acres, with about five miles of driveways, the same of walks, four pavilions, house of public comfort, six bold natural springs, two lakes and other attractions and improvements, and is said to be the prettiest park in the south. A fine menagerie was presented to the park by the present president, G. V. Gress, Esq., and is comfortably housed in a fireproof building. The construction, engineering and decorative work has all been done under the supervision of Superintendent J. L. Mosteller.

PATERSON, N. J., has two parks, the East Side Park containing about 60 acres and the West Side Park containing about 30 acres. These plots of land were purchased about three years ago expressly for park purposes, and a board of seven Park Commissioners was duly organized to care for them. Last spring Mr. Joseph Towell, a florist of this city, was elected a Park Commissioner to replace one whose term of service had expired. He has succeeded in converting our West Side Park into a paradise compared with what it was when he found it. With that exception no practical knowledge has been expended on our parks. On the first of January 1892 Superintendent Stellamacher took charge and it is hoped that the good work so ably initiated by Mr. Towell will be continued.

For Fumigating.

Will some one of your readers inform me if he knows of any firm in this country selling the Lethorion or Carbon Cones for fumigating. W. H.

IF SUBSCRIBER had given address as well as name we would have answered the query by mail. The query is one we do not care to print.

REMOVAL.—April 1 the American Florist Co. will remove from 54 La Salle street to larger and better appointed quarters in the Monon Building, 320 to 326 Dearborn street.

Clubs.

The article of correspondent "E" in the FLORIST of January 14 is one deserving of a general and favorable comment, since his attack upon the too often practiced methods of the small clubs is an attack so richly deserved and can in a great measure be remedied if you only have as he says, a live, wide awake president, (and why play the fools and elect any other kind), who will be ever on the alert to provide something for the silent voters and kickers to do for the enlightenment of his fellow members. And when he misses or skips a stated meeting of the club continue his task from meeting to meeting until you succeed in your purpose or cause him to drop out and carry his share of discord with him, for you surely do not need it in your clubs at any time.

This same man will, as "E" says, refuse to express himself in the club meetings on questions under discussion, or even vote by uplifted hand aye or nay, on any question of either little or great weight, and will then go out among his cronies and growl of rings, cliques, etc., and refuse to recognize the majority as the most powerful ring or clique we Americans know of. Where is the good sense in kicking about it until red in the face when we know the result must be just? How to manage him is a question, but I think if all clubs having stock of this kind will adopt a ballot system of voting the remedy would be an easy one, even though much slower, and would force the kicker to occupy the stall of his own selection.

Again, in your meetings the president must not fail to even insist on each backward or kicking member giving expression to their views on all subjects under discussion relating to their own line of work, and if any member know of any brilliant success or dismal failure he may have made, invite him to tell about it and thereby open up material for discussion; at the same time you are drawing him out and lessening his desire to scold.

Clubs are just what we make them and each member is just as responsible for their success as the president or secretary. Brother Florist, do your part to make your local club a power in the trade you are in and you will be surprised to see the ever increasing advantage accruing from it. And if you are too lazy to keep up with the important matters of latter days I am safe in saying to the readers of the FLORIST that your place is not worth a visit, and by reason of that same self-inflicted laziness. C. J.

New Cannas.

While in Chicago recently I availed myself of the opportunity to visit Mr. J. C. Vaughan's greenhouses at Western Springs. This establishment is well laid out and quite extensive. There are some 15 or 16 greenhouses well filled with a general stock for the wholesale and retail trade, and an inspection is very interesting to any lover of plants.

One of Mr. Vaughan's specialties is cannas, and they seem to be in their glory here, planted on tables in his black Illinois soil. He has, I should judge, thousands of Mme. Crozy and Star of '91. One of the most beautiful and striking varieties I saw in bloom at this place was Alphonse Bouvier. The flower is very large, dark red, very brilliant and of heavy texture. Gustave Senholz is another striking variety, the flowers quite large, orange shaded vermilion. Pres. Carnot has deep red flowers and handsome dark foliage. J. D. Cabos is another dark foliaged variety, the flowers deep orange in color, a very pleasing shade. When this sort is better known I have no doubt it will be very popular. Thomas S. Ware resembles Star of '91 somewhat, and Mr. Vaughan's foreman thinks it an improvement on that now popular variety. There were several other new cannas in this collection, not in bloom at the time of my visit, and Mr. V.'s foreman told me that these sorts were as beautiful as those I had seen, but of different shades and markings.

Another novelty of merit that I noticed at this place was Pteris Victoriæ, a great improvement on P. cretica albo-lineata. It is more graceful and compact than the old variety and will make handsome little table plants when small.

Quite a nice stock of the new Selaginella amelliana was also noticed here. This is one of the handsomest selaginellas the writer has ever seen.

Calla Little Gem was blooming quite freely in 2½-inch pots. This will be quite a little novelty as a house plant for the ladies, as it is very dwarf and takes up but little room.

Mr. Vaughan has a very large and well grown stock of Dracæna Lindenii and D. Massangeana in 6-inch pots, and the latter variety is certainly very handsome. W. W. COLES.

Kokomo, Ind.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

VIOLETS.

HEALTHY, WELL ROOTED RUNNERS OF

WELLSIANA, the finest of all single Violets; flowers average 1 inch in diameter, very fragrant and of a rich deep purple color, $10 per 100; $1 50 per doz.; from 2½-inch pots, $2 50 per doz.

VICTORIA REGINA, $6 per 100; $1 per dozen.

CZAR, $4 00 per 100; 75 cts. per dozen.

Above three varieties are grand for winter forcing.

Hardy Perennials, Roses, Clematis, Peonies, Phloxes, etc.

New and Rare Standard Fruits; Rare and Beautiful Trees and Shrubs, Evergreens, etc.

Catalogues on application.

JOHN SAUL, Washington, D. C.

New Double White Daisy Snow Crest.

—)o(—

A most distinct variety and an improvement on all existing sorts. Its habit of growth and size of flowers, in comparison with older varieties, is gigantic. The flowers, which are borne on stout, stiff stems from 6 to 10 inches long, are of the purest white and full to the center. When fully developed they rise to a conical or sugar-loaf form, and well grown specimens will cover a silver dollar.

It makes an admirable hardy garden plant or may be forced for cut flowers under the same treatment as violets. $2 per doz.; $15 per 100.

Dreer's Quarterly Wholesale List now ready; mailed free to the trade on receipt of business card.

SHRUBS, ORCHIDS, ETC.

205 Greenwich St., NEW YORK.

During present month our regular sales of Hardy Roses and Ornamental Plants will be held *Thursday of each week*, and will be followed by sales of plants for bedding and general decorative purposes.

Special days have been set apart for the sale of Orchids.

CATALOGUES ON APPLICATION.

BEGONIAS

(TUBEROUS.)

During more than 15 years we have made a specialty of them, and by crossing and selecting succeeded in getting a strain of **low, very free-flowering plants with broad leaves and upright flower-stalks, bearing such exceedingly fine flowers and so varied as to color, as scarcely will be found elsewhere.** We recommend them as far superior to those commonly met with. We offer **fine, strong tubers** at following very low prices:

	Per 100	Per 1000
Mixed, fine quality	$ 4 00	$35 00
" extra selected	6 00	50 00
Separate colors, extra	7 00	60.00

Smaller tubers 20 to 30 per cent less.
Double mixed, fine large flowers...$10 to $20 per 100
Splendid named doubles.....$3 to $10 per doz.

Tuberous Begonias are free from import duties. Costs of freight prepaid from Holland to New York. For 250 tubers or less, $1 25; for 500, $2 00; for 1000 to 1300, $3 25; for 2500 to 3700 $5 00

Terms for unknown correspondents, cash with order or good references.

Address, HERMAN SCHLACHTER,

Winton Place, Ohio.

The Nursery Trade.

THE HALL of the House of Representatives in the Georgia State Capitol has been secured for the next meeting of the American Association of Nurserymen. Secretary Green says Atlanta is located high, near the mountains and it will not, he is told, be as hot there in June as many have anticipated.

THE Nurserymen's Association is taking active steps to prevent the passage of the bill introduced into Congress laying heavy penalties on the shipment of trees and plants infested with any injurious diseases. The law as presented is so stringent that it would practically stop the shipment of any nursery stock, as the railroads would have to refuse such shipments to protect themselves from becoming innocently liable for heavy damages due to carrying trees that even an expert might determine to be free from all insects or fungi. The only alternative would be to employ an expert with a powerful microscope to inspect each tree and even then they wouldn't be safe.

AT THE World's Fair the nursery interests will be well looked after. In addition to a large share of the space on the Wooded Island (for the specimen ornamentals) a space of five acres has been set aside for the less ornamental exhibits. All should take a hand in seeing that every department of the trade is fully represented.

MR. C. L. WATROUS of the Capital City Nurseries, Des Moines, will have charge of Iowa's horticultural exhibit at the World's Fair.

A NEBRASKA paper says: "Nurserymen now sell trees on the 15-year plan; that is the nurseryman is to receive choice of any two crops grown on the trees inside of 15 years in payment for the trees." What sort of a deal may this be called if the story is true, and what sort of a story if the latter is a fabrication?

GRAND JUNCTION, COLO.—G. J. Carpenter & Co., the nurserymen of Fairbury, Neb., purchased 40 acres of fruit land in this vicinity the first week in March.

DIXON, CAL.—Eli Snider has purchased the nursery business of D. Cooley and P. H. Brady, embracing some 200,000 young trees.

ESCONDIDO, CAL.—Geo. B. Watson & Co., have opened a nursery on Grand Ave.

Sherwood Hall Nurseries.

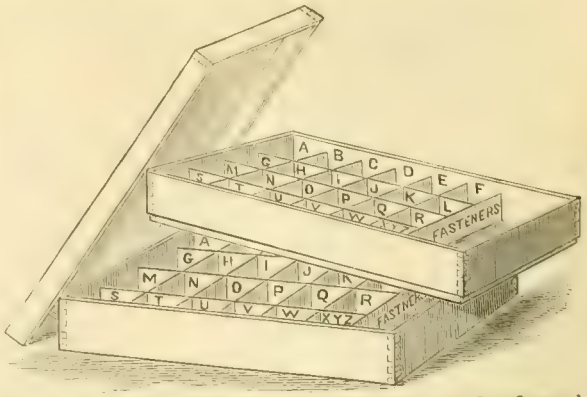
Ants in Greenhouses.

BY F. M. WEBSTER.

In your issue of March 3rd a number of correspondents refer to ants, and especially to a "little red ant" which I presume to be Lasius brunneus var. alienus. These ants are especially fond of aphides (green flies), and this is probably the secret of the attraction which greenhouses and conservatories appear to have for these industrious little insects. This is the species which Prof. Forbes has found to be so attentive to the corn root louse, a species of "greenfly" seriously injurious to young corn. The ants collect the eggs of the root louse in the fall and keep them in their homes through the winter, shifting them about as the weather changes.



M. P. Huber, in his admirable work on the "Natural History of Ants," says, "this is the most skillful of the indigenous Mason Ants." Of another common species, the yellow ant Lasius flava, the same author relates the following with reference to their habits among the Alps:

Those little yellow ants that are in possession of the pucerons or aphides serve the purpose of a compass to the mountaineers when they are enshrouded in thick fogs or have lost their way during the night. Their habitations, which are more common and more elevated in mountains than elsewhere, take an oblong and almost regular shape. They lie in a direction east and west. Their summit, and the greatest slope, always faces the east; but they incline also on the opposite side. I have verified, upon thousands of these ant hills, this observation of the shepherds. I found a trifling number of exceptions, but only in those instances where these hillocks had been deranged by men or other animals. They do not preserve this form in the plains where they are more exposed to such accidents.

I think florists will find that if they can get rid of the greenfly they will at the same time protect themselves from the ants. In fact I should be glad to learn if any are troubled by these ants who do not also have an abundance of the aphides. Ants of course infest dwellings, but in this case their habitations are usually outside, while others take up their habitations under the bricks of walks, and are attracted into our homes by the toothsome dainties of the pantry. In the case of greenhouses, however, I believe the special attraction will be found to be the greenfly, from many species of which the ants secure a supply of nectar, and the former are consequently commonly styled ants' cows.

Gas Tar on Hot Water Pipes.

A worthy florist has got gas tar on his hot water pipes, has he? Well, I can sympathize with him. I had a bitter experience the same way many years ago. Tried turpentine, potash, acids and many other things without avail. Although a great deal of it came off there was always enough left on to raise a perceptible fume when the pipes were hot and thereby injure foliage. Finally had to take out all the pipes and burn them well over a wood fire, five or six lengths at a time. They have to be watched and turned when burning, as they are easily warped. Had this been done in the beginning of the trouble it would have saved a great amount of care and loss in my case at least.

THE OLD MAN OF THE MOUNTAIN.

I have had some experience with gas tar on hot water pipes. The best and cheapest way is to burn it off. Of course the pipes will have to be taken apart, but even this trouble is better than to waste time trying to clean them with turpentine.

Louisville, Ky. GERHARD EPPING.

THE EVANS CHALLENGE VENTILATING APPARATUS.

SECURITY IN CASE OF STORMS. WITHOUT A RIVAL. EITHER IN CONSTRUCTION OR OPERATING. SEE IT.

— MANUFACTURED BY —
QUAKER CITY MACHINE CO.,
1108 and 1110 North E Street,
RICHMOND, IND.

WHEN WRITING FOR ESTIMATES, PLEASE GIVE FOLLOWING DIMENSIONS:

1st. Give the number of sashes to be lifted.
2nd. Give the length and depth of sashes, (depth is down the roof.)
3rd. Give the length of house.
4th. Give the height from the ground to the comt of roof.
5th. Give the thickness and width of rafters or sash bar

SASH BARS

VENTILATORS, RIDGES, GUTTERING AND LUMBER.

NO WIDE-AWAKE FLORIST need be told it will pay him to use SASH BARS, etc. made from

Spring Exhibition Mass. Horticultural Society, Boston.

March was still playing the part of the lion when the day arrived for the opening of the spring show, and the freezing temperature and blustering winds made the conditions very unfavorable for the transporting of large plants. Hence it was that the customary brilliant array of azaleas was wanting and the lower hall wore a forlorn look notwithstanding the beautiful exhibit of the Bussey Institution which occupied the center of the floor, but of whose beauty much was lost on account of the emptiness all around it.

This exhibit was arranged in the form of a rockery filled with forced shrubs and native and garden species of hardy herbaceous plants. To the artist's eye it was the most perfect feature in the exhibition, the naturalness and beauty of the arrangement bearing high testimony to the taste and skill of Walter and C. J. Dawson, by whom it was done.

On the second day, the weather having moderated, Mr. J. H. White sent in a nice group of finely bloomed Indian azaleas, genistas, etc., which helped to render the rest of the hall more inviting, but what was most needed was a heavy belt or several groups of evergreens, the addition of which would have furnished the requisite setting for the Bussey Institution gem. The lack of background is a perennial fault with these spring shows. The beautiful bank of orchids in front of the stage in the upper hall lost much of its effect from the big empty wall behind it.

But apart from this lack of background no better arranged nor more brilliant display has ever been seen here than that in the upper hall and the uniformly high quality of every exhibit was generally commented upon. The big center table extending nearly the entire length of the hall was devoted to the roses and carnations and was essentially a florists' table.

The display of roses was the best ever put up here. Much of the interest centered around the entries for the two rich silver cups which stood on a table near by, which had been offered by the Waban Rose Conservatories for the best and second best twenty-four blooms of that variety. The $100 cup was won by W. H. Elliott and the $75 cup by H. E. Holbrow. Competitors in the rose classes were required to keep their exhibits in condition till the close of the show, on the fourth day, a vote being taken each day by the judges.

The rose premiums are more liberal than formerly, but are still too small when the requirements regarding the daily renewal of the blooms is considered, and they would not be unreasonable were the amount doubled.

The prize for best tea rose introduced since 1889 was awarded to E. M. Wood & Co. for Waban, there being no other entry in this class.

The Mermets, Brides, Brunners, Wattevilles, Gontiers, etc., were all of the highest grade, the principal exhibitors being C. V. Whitten, Lawrence Cotter, gardener; E. M. Wood & Co., Montgomery Bros., H. E. Holbrow, W. H. Elliott and Thos. H. Mead.

The carnation display was more extensive than ever before and attracted much attention. This department is one where an extension of the premium list might profitably be made and where the exhibition covers four days a duplication of the prizes would seem desirable. R. T. Lombard showed seventeen varieties, among which Golden Triumph, Hector, Ferd. Mangold and Mrs. Fisher were the leaders. His Golden Triumph took first prize in yellows. W. Nicholson showed fifteen varieties, including a fine pink seedling from Mrs. Fisher, raised by Sewall Fisher, which received honorable mention, and May Fisher, by the same raiser. May Fisher is a red and yellow variegated in the way of Sunrise, but the markings are much cleaner than in that variety. The handsomest blooms on the table were in the set grown by Lothrop Wight and exhibited by Galvin Bros. Among them were The Princess, yellow, Hector, scarlet, and Mrs. Fisher, white, all of which took first prize in their respective classes. The varieties shown by H. K. Southworth were all well grown and handsome. Paul Richwagen's Ferd. Mangold took first prize in crimsons.

The orchid classes were well filled, albeit the gardeners complained of the meagreness of the prizes as compared with the risk and loss consequent upon a four days' sojourn of their pets in an unaccustomed and injurious atmosphere. In the display from E. W. Gilmore, Thos. Greaves, gardener, there were specially well grown plants of Ada aurantiaca, Miltonia cuneata, Cypripedium insigne nitens, C. Boxalli, Odontoglossum Pescatorei and Alexandræ and phalænopsis and denbrobium in variety. A certificate of merit was awarded to an Odontoglossum Pescatorei, a beautifully marked variety.

J. L. Gardner, C. M. Atkinson, gardener, had fine specimen plants of Phaius grandifolius, Cattleya Trianæ, cœlogynes, odontoglossums and phalænopsis.

In the collection from N. T. Kidder, W. J. Martin, gardener, there were some fine specimens also, including Cypripedium villosum and Cymbidium Lowii.

Norton Bros. and Benj. Grey both contributed orchids in variety. In Mr. Grey's collection were seven distinct varieties of Dendrobium nobile and the much coveted Cœlogyne cristata alba. From Siebrecht & Wadley came a choice little group of orchid blooms and rare nepenthes. Cat. Schilleriana, Oncidium fuscatum and C. speciosissima Ernestii were both much admired. Among the nepenthes was a grand seedling from Mastersii and rubra

punctata, to which was awarded a certificate of merit.

A group of orchids from Wellesley College, grown by Ed. Butler, gardener, contained the finest plant in the hall, a beautiful symmetrical specimen of Denbrobium nobile bearing between 500 and 600 blooms. Also an Odontoglossum nebulosum, which received a certificate of merit.

The groups of spring flowering bulbs, cinerarias, polyanthuses, etc., were all rich in material and well arranged. The group from Dr. C. G. Weld, K. Finlayson, gardener, was very effective and the lovely acacias and dazzling cinerarias were much admired. His cyclamens were arranged in a separate group around a specimen Acacia pubescens, and it is safe to say that no finer cyclamens were ever seen in that hall.

A mixed group from John L. Gardner matched Dr. Weld's on the opposite side of the hall. Here were finely grown specimens of Chorizema cordata, Eriostemon intermedia, boronias, viburnums, ericas, lilacs, etc.

The Bussey Institution had two large groups in this hall, one containing trilliums, Cypripediums acaule and spectabile, jonquils, crocuses, hardy azaleas, etc., and the other made up of staphylleas, andromedas, daphnes, kalmias, ericas and rhododendrons, with a border of lily of the valley and freesias.

A large group of azaleas, anemones, hyacinths, narcissi and ixias was staged by N. T. Kidder. The arrangement of this stand was very artistic.

The display of spring flowering bulbs from W. S. Ewell & Sons was very complete and was winner of several first prizes.

A. Galbraith had excellent tulips and hyacinths in pans and W. Patterson polyanthuses and cyclamens. Mr. Patterson's exhibit was backed up by a regular hedge of Phaius grandifolius.

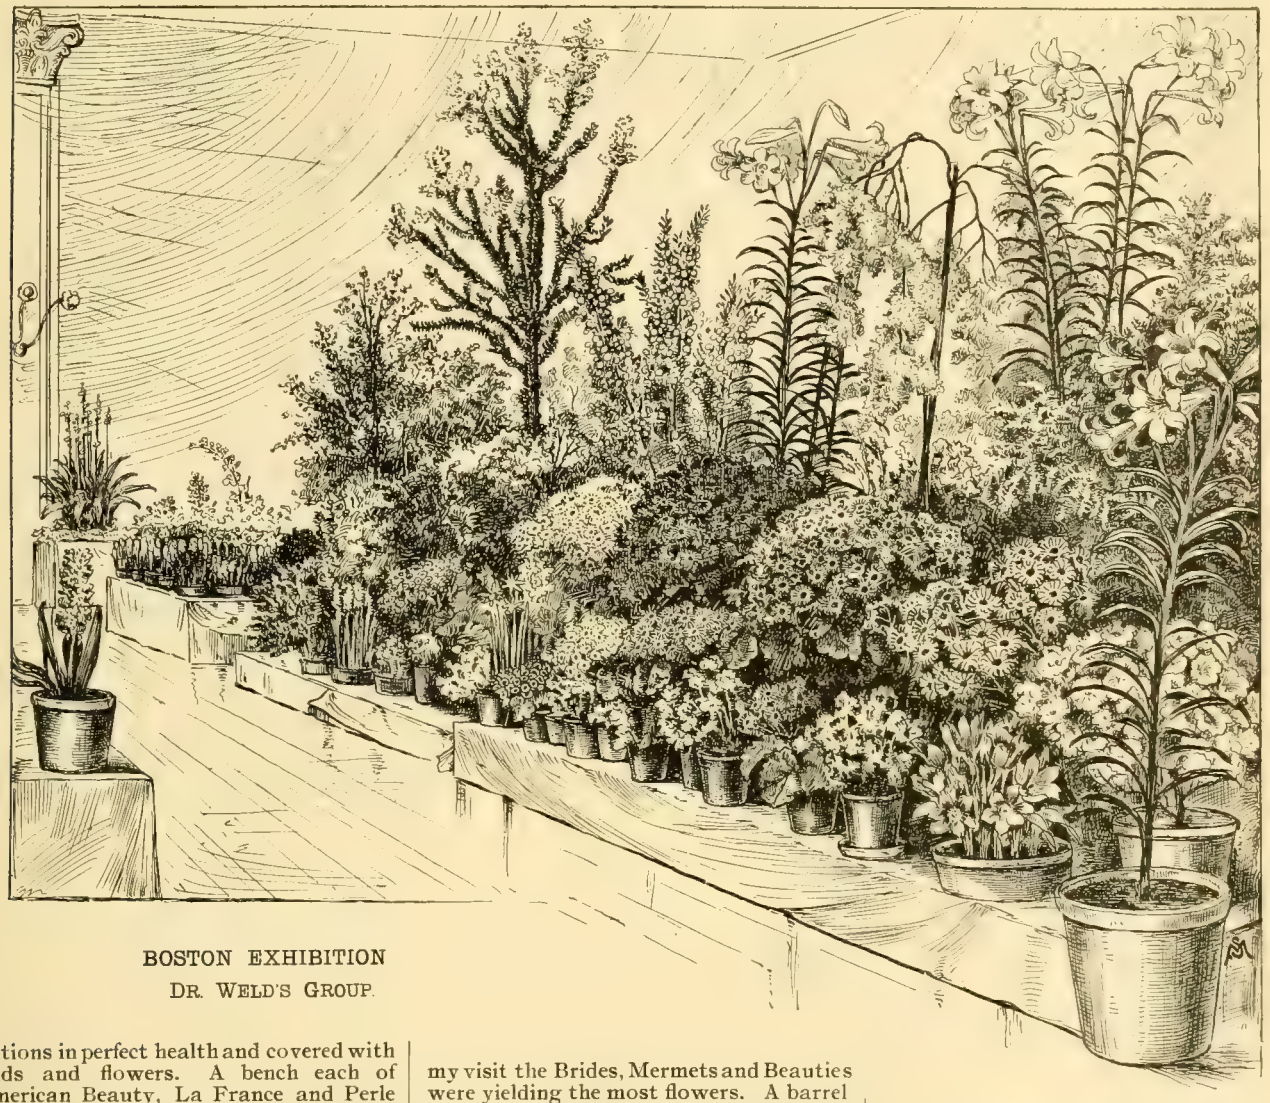
Fine mixed groups also came from Arthur Hunnewell and Mary T. Goddard.

Among the specially noticeable things were a large shapely plant of the Dawson rose, full of bloom, from W. C. Strong; Astilbe Japonica grandiflora, from J. W. Manning; Azalea "John Gould Veitch," from F. B. Hayes; and Clivia "John L. Flanders," from A. H. Fewkes.

D. Zirngiebel, as usual, came out on top in the pansy line, although Mrs. E. M. Gill's exhibit made a very good second.

The Farquhar plate for the two Harrisii lilies was won by Fred Palmer.

Premiums in addition to those already noted were awarded as follows: For general display of carnations, R. T. Lombard 1st, W. Nicholson 2d; for twelve blooms Ulrich Brunner, Thos. H. Mead, C. V. Whitten; for Catherine Mermet, Waban Rose Conservatories, T. H. Mead; for Cornelia Cook and Mme. Hoste, Waban Rose Conservatories; for Duchess of Albany, C. V. Whitten; Madame de Watteville, Waban Rose Conservatories, Montgomery Bros.; Papa Gontier, C. V. Whitten, H. E. Holbrow; The Bride, Waban Rose Conservatories, W. H. Elliott, general display of spring bulbs, W. S. Ewell & Son. There was no competition to speak of in Indian azaleas and most of the prizes went to J. H. White. In cinerarias and cyclamens Dr. Weld had the field nearly all to himself. Dr. Weld took all the first prizes on hyacinths, excepting in six plants and single plant, where N. T. Kidder came out best. On freesias and on Roman hyacinths J. L. Gardner was first and Bussey Institution second. J. L. Gardner also took first on lily of the valley and three pans of tulips. W. S. Ewell & Son were first on general display of bulbs, six pans and three pans of tulips and six pots of jonquils. On polyanthuses W. Patterson was first. On hardy flowering deciduous shrubs and evergreen shrubs the Bussey Institution was first and J. L. Gardner second. On hard wooded greenhouse plants J. L. Gardner first and Dr. Weld second. The prizes for designs were awarded to Norton Bros., first, and Mrs. A. D. Wood, second.



BOSTON EXHIBITION.

HARDY PLANTS AND SHRUBS, SHOWN BY THE BUSSEY INSTITUTION.

My Trip Continued.

A stage ride of four miles on a bright crisp February morning, by hundreds of acres of vineyards, brought me to Prospect Station, and a primitive station it is. As there was about a ton of dynamite piled up in boxes in the waiting room I preferred to walk the platform. A pleasant ride of 80 miles through Corry, Titusville, (where oil talk and derricks really begin), Oil City, and eight miles more by the banks of the broad and twisty Allegheny, brought me to the home of Wm. T. Bell and the really beautiful little city of Franklin, now famous beyond the borbers of Pennsylvania for having the finest stock farm in the country and the fastest trotter in the world (Sunol is there and Marvin too).

Mr. Bell's houses and residence are about a one-mile walk from the river and situated on a fine residence street. He has a fine substantially built place of seven houses, besides frames, etc., and a large commodious brick office. Three of the houses are 130x20 and attached. The outside walls are wood and the partition walls, 12 inches, solid brick. Order and system is very noticeable throughout the entire establishment. Mr. Bell supplies many small towns for miles around and keeps a general stock of plants in useful shipping sizes. His verbenas have for many years been noted for being absolutely healthy and are shipped to many distant points. In flowering crops the most noticeable was a house of car-

BOSTON EXHIBITION
DR. WELD'S GROUP.

nations in perfect health and covered with buds and flowers. A bench each of American Beauty, La France and Perle roses were in fine condition, all looking well, but the Beauties took the lead; grown upright and well cut back they were sending up good flowers as numerous as you sometimes see Bon Silenes. A good look round Mr. Bell's place and a five hours' chat with the proprietor I considered well worth the price of the whole journey.

The following morning I hired a horse and rig at Oil City and climbed three miles over the hills to the mammoth establishment of the "Oakwood Farm and Garden Co." It is difficult while traveling over the hills to realize that there is three or four acres to be found level enough in the county for greenhouses, but there is, with just the right slope to the south. They have 14 houses, each 300 feet long, half of them 20 feet broad and half of them about 12 feet. On the east end a large wide house runs the entire length of the 14 houses and on the west end is an enormous shed big enough for three or four teams to drive through abreast. This of course is used for the storing of soils, manure, etc., and a mighty useful place it must be. Detached from the big range are a half dozen small houses, the beginning of the establishment, which this summer will be pulled down and converted into another of the three-quarter span houses. Practically, nothing is grown here but roses. Beauties, La France, Mermets, Brides, Cusins and Niphetos fill the most space. Excepting the front benches all the roses are planted in solid beds. At the time of my visit the Brides, Mermets and Beauties were yielding the most flowers. A barrel of tobacco stems and a jet of steam at intervals along the houses keeps the fly entirely under. The whole place is heated with steam, generated of course by that great luxury, natural gas.

The next jump I made was to Bradford, McKean Co., Pa., the richest, most prolific and continuous oil field the world has ever seen. Bradford has all the style and bustle of a much larger town. Walking up Main street I found the city depot of Florist Rockwell, situated in the best business portion of the city. Although oil is desperately low, which makes all the difference in the world to business, Mr. R. did not complain, but said business was and had been good. In company with Mr. Rockwell I first visited the houses of Mr. George L. Graham on Jackson avenue. Mr. G. has two houses, each 100x18, one devoted to carnations and some other stock and the other entirely to roses. I must certainly give Mr. Graham the first prize for rose growing, at least of any I had seen in my short journey. They are grand, uniformly throughout the house. If some large establishments were producing in proportion to their glass the quantity of roses Mr. Graham is, this locality would be flooded. The kinds grown are Mermet, Bride, Perle and Cusin. Mr. G. is a pupil of John N. May, so that accounts for a good deal.

A drive of about one mile brought us to Mr. Rockwell's place. He has four good houses, nearly all occupied with flowering stuff for his city store. One house of carnations was particularly good. Mr. R. swears by Silver Spray for white. Along the front of a carnation bed was planted a row of freesia. This I am aware is often done, but not with such success. The flowers were there by the thousand and they certainly were not robbing the carnations.

Another mile further west is the entirely new houses of Mr. Miles S. Howe (Marilla Gardens). He has six well built new houses. Three of them are occupied with early vegetables and well they are done. Two of the largest houses are filled with roses and carnations and one with lilies and other stock, all of which is used up at his store on Main street. As eight inches of snow had fallen in three hours and a good portion of it had fallen on me, Mr. Rockwell, Mr. Graham and your humble servant were glad to get back to town. Mr. R. said there was something more to see. Following him we entered the St. James Hotel (a fine house). We saw it and felt better and it just gave me time to board the Rochester and Pittsburg train. A ride of 80 miles brought me home to Buffalo a wiser and a better man. G. S.

IT IS REPORTED that Congressman Caminetti of California has withdrawn, or will not call up, the bill introduced by him, and which threatened to kill the shipping trade in trees and plants.

Clubs Again.

It is a fact that the man who has the temerity to find fault with the existing state of things is in nine cases out of ten called a "crank," or, as Mr. W. J. Stewart classically puts it, a "pessimistic politician," but it can scarcely be said that my views as expressed in the FLORIST of February 25, under the above heading, are at all pessimistic, rather the contrary, in fact I hold quite optimistic opinions as to the future of the S. A. F., only I think that it must strike out new lines for itself before it can continue to do the good it has done in the past, and I have very little doubt but that the necessity of this will be seen and acted upon.

Now I still think that a list of essays "that would be productive of more benefit and provoke more discussion" might be gotten up, but after reading the letters of Messrs. May and Stewart it struck me, why could not these essays be printed in the FLORIST? and I began to doubt if any list of essays however good could compete on even terms with Washington Monument, the Capitol, the White House or Made's Hotel. So that if this view is taken we are reduced to the simple questions, what has the convention of the S. A. F. to give its members, outside of essays, besides the trade exhibit, the gathering together of the trade, the bowling tournament, sight seeing, banquets and the like? And are the advantages to be gained (leaving out the essays) sufficient to warrant the amount of energy and money expended to procure them? I notice that neither Mr. May nor Mr. Stewart touch on the points, absence of discussion after reading essays and "lack of result from the amount of energy and money expended."

I am aware that many of the members of the S. A. F. make the occasion of the convention their annual outing, and I am aware that they need an annual outing badly enough and I should be the last to object to their having a good old fashioned time during that annual outing if they feel so inclined. I am not one of those who would wish to put them on a diet of porridge, tea and coffee, but I scarcely think that the executive committee or the founders of the S. A. F. would like the convention to develop into an annual trade picnic which, horticulturally speaking, would be the "nowhere" I mentioned in my letter.

The honorable member from Boston, friend Stewart, expresses the belief that I do not feel half so bad about this question as my writing would indicate (and I must here beg to thank him for the kindly way he speaks of me; our relations with each other before and during the convention were certainly very pleasant and I trust they may always continue to be of the same nature). Well, I can't say that I have been worrying about it sufficiently to lose any flesh, but I suppose that having probably formed too high expectations concerning the S. A. F. the disappointment at not seeing any indications that these expectations were likely to be realized just yet produced the ideas expressed in my article "Clubs Again," and I cannot say that either Mr. May's or Mr. Stewart's suggestions as to my preparing a list of essays, stuffing the question box, etc., etc., have lessened the disappointment in any degree.

With a few more letters after the style of Mr. Whitnall's there would soon be matter enough, if acted upon, to galvanize new life into the present rather rheumatic bones of the S. A. F., and I think that if Mr. May, instead of indulging in "veiled sarcasm" to a considerable extent, had shown some disposition to at least try and find out whether there was not really some cause for complaint, his letter would have carried more weight. My article was not written just for the amusement of creating a "racket," nor with the idea of doing any injury or belittling the society or any of its officers or members, but with the intention of calling attention to the fact that to do any good the S. A. F. must *lead the van*. Brains enough were found to start the S. A. F. and to keep it going so far and I feel sure that there are brains enough in the country, I will say even in the executive committee, to devise plans whereby the society may always be enabled to say "we are the first to touch unknown seas." It is very pleasant and easy to run along in grooves, but to keep ahead it is necessary to keep a sharp lookout that someone does not make a short cut and "get there" first.

A. H. EWING.

Normal Schools, Toronto, Mar. 25, '92.

Training Chrysanthemums.

I should like your opinion, or the opinion of any of your readers, on the best or most desirable way of training chrysanthemums for show.

I think the custom of using so many sticks should be discouraged, as they look so unsightly, especially when the sticks are large and the foliage poor. We know they must have supports, but could not fine wire be used, worked from a strong center stake to wire hoop fastened to rim of pot? Fine galvanized wire I think would be best if it can be had.

Any remarks or suggestions from your readers will be of interest to G.

Notes on Foliage Plants.

Fittonias: These pretty little foliage plants are among those available for planting in small ferneries or for mingling among others in some table decorations, and may therefore be safely included in the stock of a retail florist.

It is admitted that they are not as hardy as some other species that are more generally used for this purpose, but at the same time they will stand long enough to be very effective in such arrangements, and being easy to grow and to propagate removes any difficulty in keeping up a supply. Moderate shade, a moist atmosphere and a temperature of about 60° are the chief requisites for their successful cultivation, and increase is readily effected by means of cuttings.

Four varieties of fittonia are about all that are recognized, and among these F. argyroneura is perhaps the most useful, its ovate leaves being about three inches long, dark green in ground color and netted with silvery white lines.

F. gigantea is also a good one and of larger growth than the above, and being variegated with pink instead of the white of the preceding variety.

F. Verschaffelti and F. Pearcei are the other two members of this interesting group, and both of which have midrib and veins lined out with red or dark pink, the colors varying somewhat with the age of the foliage, though F. Verschaffelti is rather the stronger grower of the two.

It may also be noted that these plants are of creeping habit and another use for them may be found by planting them on the surface of the pots of large plants used for decorating, after the same manner that Selaginella Kraussiana is frequently used.

Peperomias: These pretty little stove plants are now occasionally enquired for, and doubtless would be much more extensively used were their merits better understood, their leaves being of such thick and fleshy texture that they stand exposure to the dry air of a dwelling for a considerable period.

The peperomias also are best suited when protected from the full sunlight and grow well in about the same temperature as that recommended for fittonias, but will flourish with much less water than is necessary for the well being of the latter.

The propagation of peperomias is quite an easy matter, and is usually managed in the same manner that Rex begonias are multiplied, namely, by leaf cuttings, these being put in a cutting bed in a warm house, the only care necessary being not to overwater them.

In the matter of soil they are not very exacting, but a light, sandy compost is usually most satisfactory, and if reasonable care be given in watering no difficulty will be had in securing a good result.

Among those readily procurable there is none better than P. Saundersii (perhaps more easily recognized under its old name of P. Verschaffelti), the somewhat ovate leaves of which are chiefly silvery white in color, while the veins are outlined in bright green. This makes a compact little plant, and like most of the genus is very well adapted for house culture.

P. maculosa is pehaps less widely known than the above mentioned and has leaves of somewhat similar shape and bright green color, the stalks of which are more or less mottled with reddish purple.

Still another good one is P. marmorata, a species of quite dwarf habit and the leaves of which are variegated with white though not to so great an extent as those of P. Saundersii.

P. resedæflora is also quite a pretty little species, having small dark green leaves on short stems and also producing spikes of small white flowers, these bearing some resemblance to those of mignonette.

Hoffmannias: These old fashioned stove plants are probably better known under their former name of campylobotrys than by their correct title, but, be that as it may, the fact remains that they are both pretty and easily grown and deserve a place among decorative subjects while in a young state, though they are apt to become somewhat leggy when kept on hand too long.

H. refulgens is one handsome member of this genus, the leaves of which are from four to five inches long and reddish in color, and another is H. Ghiesbreghtii var., this being more highly colored than the type, the leaves being marbled with white, yellow and various shades of red.

The two varieties noted above are probably the best of the genus, though H. discolor is also pretty, its foliage being dull green on the upper side, while beneath it is suffused with red.

W. H. TAPLIN.

DOUBLE FLOWERING PLUM (PRUNUS TRILOBA).

Double Flowering Plum.

Apropos to the article in the AMERICAN FLORIST for March 10 by Mr. Falconer on ornamental trees and shrubs for florists' stock, I forward you photograph of a double flowering plum (Prunus triloba) and which confirms what he says in regard to handsome shrubs being object lessons to the customers of local florists. Every visitor to my place, after seeing this in bloom, wants to purchase a plant of it. The specimen shown has been planted about twelve years and at the base has a diameter of fifteen feet and stands about eight to ten feet high, each stem before the leaves expand being covered with bright red buds and pink flowers of the size shown.

Some seasons it is in bloom for late Easter when it is a bonanza, and its long stems, from five to six feet long, thickly filled with flowers, are a delightful addition to the stock of usual flowers for that season, as every one naturally tends to spring flowers after a long and dreary winter. This plum is very hardy and free from insects. It is said to be subject to the fire-blight that affects apple trees, but my observation and experience leads me to believe that thorough drainage is a sure preventive, as during the past five years of partial drought no fire-blight has been observed on apple or other trees in this vicinity. J. T. TEMPLE.

Davenport, Iowa.

Shade Trees in Cities.

In a climate like this, trees on the sidewalks afford a most grateful shade in hot summer weather, at the same time they can not be regarded as an unmixed good, for in many cases as they reach maturity they crowd the sidewalks and the roots frequently tilt up the pavement in such a way as to mar the comfort of pedestrians. Much of the inconvenience so caused can be avoided by planting the trees 10 or 12 inches below the collar or base of the stem instead of barely covering the roots as is not infrequently the case. By so doing the large spreading roots, especially of such trees as the elm, would not be apt to reach near enough to the surface of the ground to do harm.

I am aware that deep planting is not considered good in practice and is opposed to the method nature pursues in performing her work without the intervention of man, and therefore should be avoided on all possible occasions, more especially in the case of such trees which do not readily emit roots from the portion of the stem which may be underground. But in this case we are constrained to choose between two evils, the least of which is to plant deeper than in ordinary circumstances to secure the greatest good. The trees, under this treatment, will grow sufficiently well for shade, and the barbarous practice so common of hacking off the protruding roots will be avoided.

New Haven, Conn. A. VEITCH.

Orchids at Scranton, Pa.

We deemed it of sufficient importance to make a special trip to Scranton to see a truly splendid piece of Cattleya Mendellii with 65 expanded flowers, grown by Wm. Clark, gardener for Col. Boies. This piece is growing in a basket 24x18 inches and was purchased at Messrs. Youngs' sale for a few dollars 2 years ago. Other orchids in equally good condition were Dendrobium thyrsiflorum, Cattleya Trianæ, Phalænopsis Schilleriana, Cattleyas Warnerii and citrina. A plant of the rare Cypripedium grande, offspring of C. caudatum X longifolium, was also in good condition. Mr. Clark pronounces this one of the freest of all cypripediums, and certainly it appeared to be growing almost like a weed.

G. E. FANCOURT.

Store Trade.

This department will be devoted to matters of interest to the retail, or store florist. Communications invited.

Slavery Days.

In a communication with the above suggestive title an employe in a retail store sets forth the peculiar character of one of his employers. Such tales are not infrequent and that some are based upon fact can not be gainsaid though all stories generally have two sides. Were it not for the fact that there is a moral—with a capital M—to the tale, we should not give space to this mention.

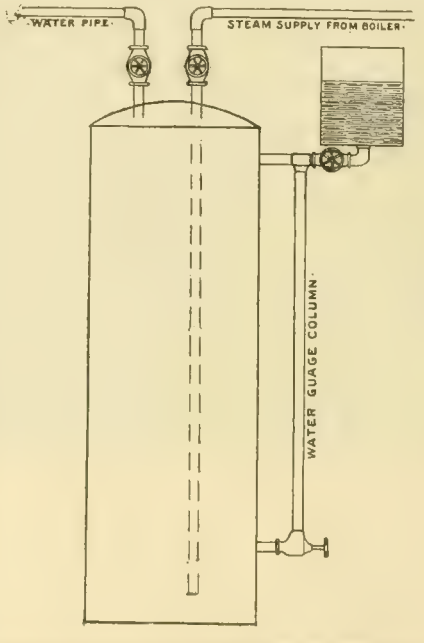
Our correspondent relates that before going to work he obtained a written contract for a year that seemed on the face of it to give him a fair deal, but that while he was rigidly held to every stipulation in favor of the employer, the latter's obligations in the same instrument were nearly all disregarded. Further that while the salary was a fair one he was made to work nearly two weeks in one—a neat way of cutting his salary in two.

According to our correspondent's story this enterprising man would keep orders in his pocket until toward closing time, so as to give his men work to do every night and have them entirely unoccupied, except to wait on customers, during the day. Our correspondent also states that one holiday week, when Christmas came

on a Saturday, he went to work at 7 a. m. Friday, and worked steadily until 10 a. m. Saturday, expecting to get through about 1 or 2 in the afternoon, but his enterprising employer kept the store open all day, and then, having received a funeral order, he kept all hands until 3 o'clock Sunday morning, so that our correspondent did not close his eyes from 7 a. m. Friday until 3 a. m. Sunday. He was then asked to be at the store by 8 a. m. the same morning. He made an attempt to comply and arrived at 10 minutes after 8. His employer stood in the store, with his watch in his hand, and scowled at him savagely as though he had lost half a day. During all this time, our correspondent says, he never received a present of any kind, no extra pay, and never a cent for his supper when he worked nights.

He further describes his employer as one who will treat a man splendidly until he gets a hold on him. Will loan him money, etc., but when he gets a good grip on him and has him tied up financially he will put the screws on and pinch him just as hard as he can. He further depicts him as a man who is as pleasant as could be wished to everyone except his employes, and his motto seems to be "It pays to be pleasant to everyone except your employes."

Now for the moral: As our correspondent says in substance: If all young men would save enough money to fall back upon in case of an emergency they would never be obliged to put up with the tyranny and insults of such mean individuals as he has described. It is good gospel though it comes from one who failed to practice what he now preaches.



Another idea suggested by our correspondent is that there be an organization of employes of florists, through which members may be warned against such men as he has described, so that others may be saved from his bitter experience.

The FLORIST is always in favor of organization, provided it is upon a broad platform. An organization of florists' employes, if designed to educate and elevate its members and so conducted as to conduce to these desirable ends, would be an excellent thing, and the complaints of members regarding employers could be placed on file with the secretary for the inspection of other members.

This would probably be an excellent thing, for the natural result would be the formation of an organization by the employers, who would unitedly compile a list of the poor sticks and bad eggs of employes that now manage to hold places for a few weeks at a time only. And this weeding out would be vastly to the benefit of the really valuable employes as well as to the employers.

Fumigating with Tobacco Juice.

In the stoke-hole or boiler pit we have in one corner a cylinder, which holds about 50 gallons. Connected with our steam boiler is a ¾ inch pipe, which passes through the head and descends to within 6 inches of the bottom of the cylinder; this is a supply steam pipe, to boil the fluid and raise it to any pressure required. Also, connected with the top or head of cylinder, is the water pipe, the same that supplies the houses. Connected also with top of cylinder is a small tobacco tank capable of holding 5 or 6 gallons of the extract and of which we can supply to cylinder any quantity desired by an X L valve connected with same close to cylinder. With further experience we find that a small quantity of fluid is all that is necessay at a time, say one gallon, and no addition of water is needed, as the steam continually passing from boiler into fluid is all that is required. We have also two other X L valves connected close to head of cylinder to control, one the supply of steam, the other the evaporized juice. So having let one gallon of the liquid from supply tank to cylinder, close the valve and open steam supply valve. In a few moments the juice is at boiling point. Now open water pipe valve, then go into the house or houses, opening any of the faucets where the aphis is troublesome, and in 30 minutes at the most it will destroy

the most venerable greenfly, although as with other systems it is far better to be used lightly now and then as a preventive rather than a cure.

We find the system has the following advantages: No possible danger to the most delicate flower; instantly applied; no hindrance from other work; no necessity of being in the fumes; no space taken up with large tobacco bales; cleanliness and effectiveness.

We get the tobacco juice from a Louisville tobacco firm. They manufacture it for sheep dip and claim it to be absolutely pure tobacco extract.

Anchorage, Ky. C. RAYNER.

The Fisheries Building at the World's Fair.

The Fisheries Building embraces a large central structure with two smaller polygonal buildings connected with it on either end by arcades. The extreme length of the building is 1,100 feet and the width 200 feet. It is located to the northward of the United States Government Building. In the central portion is the general Fisheries exhibit. In one of the polygonal buildings is the Angling exhibit and in the other the Aquaria. The exterior of the building is Spanish-Romanesque, which contrasts agreeably in appearance with that of the other buildings. To the close observer the exterior of the building can not fail to be exceedingly interesting, for the architect exerted all his ingenuity in arranging innumerable forms of capitals, modillions, brackets, cornices and other ornamental details, using only fish and other sea forms for his motif of design. The roof of the building is of old Spanish tile, and the side walls of pleasing color. The cost is about $200,000.

In the center of the polygonal building is a rotunda 60 feet in diameter, in the middle of which is a basin or pool 26 feet wide, from which rises a towering mass of rocks, covered with moss and lichens. From clefts and crevices in the rocks crystal streams of water gush and drop to the masses of reeds, rushes and ornamental semi-aquatic plants in the basin below. In this pool gorgeous gold fishes, golden ides, golden tench and other fishes disport. From the rotunda one side of the larger series of Aquaria may be viewed. These are ten in number and have a capacity of 7,000 to 27,000 gallons of water each.

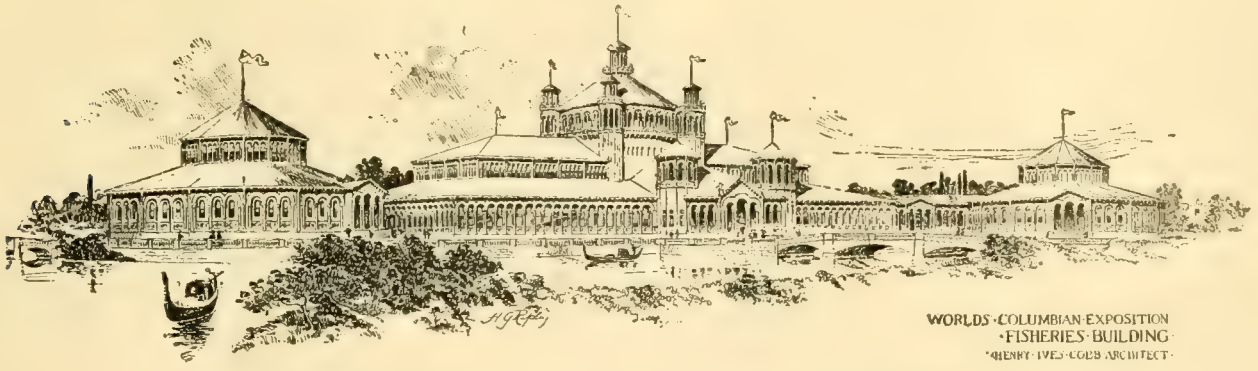
New York.

Trade is particularly quiet this week and flowers plentiful. The highest priced rose at present is Brunner; it is even ahead of the Beauty and is unquestionably the finest of the hybrids just now. Roses in quantity are sold as low as $15 or $20 a thousand—good flowers, too. Beauties are extremely plentiful, as may be guessed by seeing them in the hands of the street fakirs. These street venders sell a tremendous quantity of stuff at this season; they continue to multiply year by year, and there is no doubt they sell a lot of stuff to people who would not go into a store to buy, so they benefit the grower at least.

Without realizing high prices bulb stuff sells well, both plants and cut flowers. Valley is much finer than it was; Asmus is cutting a very good crop at present.

Thorley has flat square baskets with high square handle filled with bulbs, just a mass of one variety; a bow of corresponding ribbon is tied on the handle. The effect is very good, either with Dutch hyacinths or tulips.

Hodgson has been arranging some fine decorations with rhododendrons. There are not very many in flower yet, though some of the tender ones seem capable of early forcing.



There appears to be a temporary scarcity of decorative ferns in small sizes in this vicinity. The retailers use them in unlimited quantity; in fact, the fern trade is in a very healthy condition.

Alex Burns finds himself quite busy with dinner orders, but says prices are not very good.

Mr. Dimmock has returned from a western trip and reports a rough time on the road through New York State where the big snow storm was most severe.

Mr. C. L. Allen has also returned from the west, having spent two weeks in traveling. He returns full of enthusiasm for western energy, declaring that with their present rate of progress the western men are likely to practically control the seed trade within a few years. Mr. Allen also gives high praise to the western florists. Among others he visited H. W. Buckbee, of Rockford, Ill., who he declares had some of the finest La France and Mermets he ever saw, east or west. Mr. Buckbee's place was highly praised both for fine houses and fine stuff.

S. C. Nash, of Clifton, N. J., who is chiefly known by the fine Beauties he has been growing for several seasons, is now going to make a trial of aquatics, in which he takes much interest. This class of plants attracts much interest now, like orchids; people are learning that it is possible to grow very handsome members

THE FISHERIES BUILDING, WORLD'S COLUMBIAN EXPOSITION.

of both classes without extreme difficulty.

Some exceptionally fine table decorations were to be seen at the recent Mi-Careme fete in aid of the Orthopedic Hospital. This affair, which was a notable society event, was called "From market to table," showing the preparation and serving of food in the best style. There were five decorated dinner tables. That in honor of the lady patronesses was round in shape; it had a large round centerpiece composed of Cypripedium insigne and Lawrenceanum, phalænopsis and cattleya. Radiating from the centerpiece were broad sashes of pistachio green ribbon, which passed over each cover; each sash was decorated with an exquisitely painted bunch of cypripediums, while the guest's name was painted on it in gold. Where the sashes met the centerpiece they were looped so as to form a border around the flowers.

Another dainty table in white and gold was heart shaped. The decoration was a large heart of lily of the valley, with a border of Bride roses. A little golden acacia was mingled in the border, and a large arrow tied with a white sash pierced the heart.

The fashionable fleur de lys form was seen in another table; the flower decoration was formed by heavy ropes of violets, outlining the petals of the fleur de lys. This table was not only extremely artistic but deserves special note for the novelty of the shape, which is now such a highly favored figure in decoration of all sorts.

A fourth table took the form of an open fan. The table itself formed the semicircular body of the fan, while the sticks were represented by ribbon sashes, alternately pink and pale green, which met under a huge knot and ends of ribbon. The floral arrangement consisted of pot plants, hybrid roses, daisies and palms, filling the space under the ribbons and peeping above the simulated sticks with a charming irregularity. This fan table is a style much approved for wedding dinners.

The fifth table, arranged for six guests, was diamond shaped. Instead of a conventional centerpiece the decoration was at one end of the diamond, so that all the guests faced it. It consisted of a huge pink horn of plenty, pouring its burden of flowers over the table. It was filled on one side with a mass of Mermet roses, while the other side consisted of daffodils and acacia. This makes a very desirable table for a small party.

These decorations were all arranged by Siebrect & Wadley and are calculated to add much to the reputation of that firm.

It is noticeable that pink and yellow continue to enjoy high favor in all house decorations. This winter has seen a decided increase in the number of orchid flowers used. We hear a whisper in the trade that the Beauty, which has been *the* rose for so many seasons, may yet have to abdicate in favor of some fairer rivals. The retailers find it pretty hard to make much out of this rose, even when it is sold for a high price, but they have to sell it to meet a popular demand.

Chicago.

There were no essays at the last meeting of the Florist Club, but a good program for future meetings was made up. At the next meeting Mr. E. Buettner will present his deferred essay on the violet and Mr. J. T. Anthony will also read a paper upon a subject of his own selection. At the following meeting Mr. John Thorpe will treat upon the growing of exhibition chrysanthemum plants and flowers and at the meeting succeeding this Mr. Frank Leslie will bring up some subject of his own selection.

The lawyer who had undertaken to prepare a written opinion upon the legal points in the proposed war upon the cemeteries who had gone into the business of growing cut flowers for market, had left the document at his suburban home and the matter had to be laid over for still another meeting.

One new member was added to the roll in the person of Mr. Harry Balsley of Detroit, who was present at the meeting. Messrs. J. G. Whilldin and W. Mott of Philadelphia were also present as visitors.

Mr. Frank Leslie spoke of the reports that had appeared in the FLORIST of Lilium Harrisii with single stems bearing as many as 14 to 15 flowers and told of a lot of bulbs he had grown, of which none bore less than 14 flowers to a stem and some with as many as 21, all first class blooms. He related his experience in investing in full sets of new chrysanthemums and said he would make no more such investments. His experience was that as a usual thing the sets contained one or two good things and the rest of the number was made up of sorts only fit for the rubbish pile. Touching upon the matter of exhibition flowers of chrysanthemums he said he had cut his number of varieties down from 170 to 21 and increased the number of each variety so that he could now have a much better selection of flowers of each variety to pick out show blooms from.

Mr. Thorpe said that the project of an international chrysanthemum show was now being considered by a committee of the local directory of the World's Fair and action was being taken looking to overcoming a technicality that might be so construed as to prevent the taking of an admission fee for entrance to the grounds prior to the opening of the fair in '93. He believed that this point would be satisfactorily adjusted and that the exhibition would not only be held, but would be one worthy of the great occasion.

In addition to the club visitors noted there were present in the city during the past week, James Currie, Milwaukee, J. A. Peterson, Cincinnati, and Mr. Mertz of the French syndicate of bulb growers.

Trade for the last week has been spasmodic and irregular and prices are unsettled. There is no apparent glut of any particular stock excepting callas; these are slaughtered sometimes at prices almost next to nothing. Roses are suffering somewhat but hold to fair prices on the whole. Good stock, such as Mermets, Brides and La France, bring $4, and specially fine lots as high as $5. Gontiers and Perles go at 3 to 4. Carnations held their own right through the season. The demand keeps brisk and good long stemmed flowers sell readily at $1.50. Violets are quite plentiful, but there is no great overstock. Prices run from 75 cents to $1 for good stock.

W. N. Rudd, Mt. Greenwood, is sending in some very fine Brunners and Laings, which find a ready market.

Bulb stuff of all kinds is scarce, tulips in particular; valley also is not over-abundant, good stock commanding a good price. Harrisiis are coming in freely and sell rather slow.

Smilax is extraordinarily scarce and sells at 25 cents a string, the highest price paid for years.

Albert Fuchs, a north side florist, last week attempted to convict an employe of embezzlement and larceny of palms. Only Mr. F. and his wife furnished important evidence for the state, while the defence had a score or more of witnesses to testify that Mr. Fuchs' general reputation for truth and veracity was bad. When the judge, after an hour's hearing, instructed the jury to return a verdict of not guilty there was a feeling in the court room that the prosecuting witness, rather than the defendant, had been on trial. A number of prominent members of the trade were subpœned and came not unwillingly, since it seemed to be a case of persecution.

Mr. R. Ullrich of the landscape department of the World's Fair was very seriously injured last Saturday while alighting from a moving train on the Illinois

Central at 61st street. While no bones were broken he was seriously injured internally and it will probably be a long time before he will be able to resume his duties. Mr. Ullrich had made many friends during his stay here and all wish for his speedy recovery.

The quarterly meeting of the Horticultural Society of Chicago will be held in the club room of the Sherman House at 3:30 p. m. Saturday, April 9. A very interesting program is promised.

Baltimore.

That must be a peculiar sort of individual who could not find weather to his liking on some one day of the past seven here, for we have had the deepest snow of the season, one day with a temperature of 13°, one with a temperature of 65°, bright sunshine, thick clouds, rain and even a little dust all in the one short week. This is the weather that puts frost on the growers' hair as well as his glass and even adds to the cares of the haughty dealer, for when he has secured a big order who can tell him whether the growers upon whom he leans may not prove broken reeds, and that through no fault of theirs but owing to the utter uncertainty of the weather.

Still in spite of the weather flowers continue to come in in fair quality and sufficient quantity, and after they are in to sell, thanks to the solemnities of society such as amateur theatricals, bazars, fairs etc., all of which in the accounts which appear in the daily papers of them have the word charity prefixed or affixed or stuck on somehow. Surely "charity covereth a multitude of—amusements." However, so long as they help to make the pot boil, these entertainments are charitable to the florist and caterer if to no one else, and the scribe believes in "praising the bridge that carries one over."

Prices continue the same. Really first class buds command as good prices as before Lent began. Violets are plentiful at 50 cents and are keeping up very well this week in size and color. Dutch hyacinths may be seen on every hand, some fine ones bringing 25 cents each at retail, but more selling at from 12½ cents to 15 cents. Astilbe is beginning to be seen, and a few hybrid roses, but not in any quantity. An occasional rhododendron or hydrangea that has bloomed ahead of its owner's desire is met with in the stores, but the demand is not for plants yet and will not be for two weeks or more.

MACK.

Boston.

The retail florists report a sort of half and half trade, not busy enough to be called brisk and not slow enough to call dull, rather intermittent and hard to put any dependence upon, but with life enough to demand constant attention.

The production of flowers of the ordinary market kinds has not been as heavy as is usual at this time of the year, presumably on account of the tardiness of spring weather in appearing, so it is that Lent is slipping along very smoothly and is already half gone without having caused other than a few spasmodic periods of glut. Roses of most kinds are fairly plenty. One peculiar feature of this market is the great difference between the ordinary market figures on certain roses and the fancy prices obtained by those growers who have specially fine specimens to offer. For instance, while plenty of fair quality Mermets, Brides and Wabans may be bought for $6 per 100, yet as high as $3 per dozen is realized by certain parties for these same varieties, when effort is made to produce extra large and perfect blooms. Jacqs are in good supply and bring all the way from $10 to $20 per 100 according to quality. Carnations are none too plenty. Indeed the supply of long stemmed white ones is not large enough and there is no trouble to get $2.50 per 100 for such.

Bulbous stuff is not badly overstocked, double daffodils being short and tulips coming in just about the right quantity. Lily of the valley is the most abundant flower in this class and is lower in price than at a corresponding period last year. Harrisii lilies are selling at fair prices as fast as brought in. Smilax is very scarce indeed, as is always the case in April. Violets are first class in quality. A large proportion of those now coming in are from frames undoubtedly.

The popularity and attractiveness of the pansy was well illustrated by the crowds of people, mostly women, about Galvin Bros.' window, in which were displayed the two dishes of Zirngiebel's pansies which received the first premium at the exhibition.

Among the novelties now in market are gladioluses and sweet peas.

The exhibition was well attended by the craftsmen from the neighboring New England towns, but the attendance from a distance was lighter than usual. W. A. Manda, of Short Hills, N. J., and H. A. Siebrecht, of New Rochelle, N. Y., were among the interested lookers-on at the game of the G. and F. Bowling Club at the Brookline street alleys on Wednesday afternoon, and Mr. Manda tried his hand at the balls with his usual powerfulness and customary good luck.

One of our florists is still laughing over an order he received recently. It began thus: "Mr. H., please make up something suitable for an old lady's corpse."

Philadelphia.

The Lenten season has lost but little to the florists about here as there seems to be plenty to do and quite a good demand for good flowers at fair prices. There has really been no glut and prices have held up very well. The cheapest roses are Perles and Gontiers at from 4 to 5, while Mermets and Brides bring 6 to 8, hybrids 25 to 50. Burton is sending in some very fine Baroness which are in great demand. Spring Jacqs are about and bring from 10 to 15.

Easter stuff is coming on very well as far as we can hear. The best is being rapidly bought up and for some things no more orders are taken. There are a good many lilies about, but we believe they will all be needed, if in fact there will be enough for the Easter trade. There has been a great demand for them the past week and it was hard work to get nice plants in flower, they brought from 10 to 12 a flower and bud.

The boys turned out nobly on Sunday and under the guidance of John Westcott Horticultural Hall soon began to look like another place, in fact it became a "veritable bower of beauty;" that is what Brother Watson, who has charge of feeding the press, called it.

If Caldwell, the gentleman who lives on various things, calla lilies included, could find nourishment in fine words, he would certainly be strengthened by what was said of him to-day if he could have heard it. He certainly did the grand for the Horticultural Society, as the hall was beautifully decorated with palm leaves, crowns, wild smilax and needle pines and all with his compliments. He will hear from the boys in no uncertain way very soon.

The prospects for the show are very good, the entries, particularly in the cut flower department, being very large. If the weather is fine the exhibition will certainly be a success.

The bowling matches of the first, second and third classes for prizes offered by the club house committee were all finished last week. Anderson, in the first class, was sick, but recovered in time to roll off his games and made a great spurt at the finish. He was three matches behind, nine games, and made an average of over 160 pins to a game. This was great rolling, but on Saturday last in a match game he rolled in three games 566, making 232 in one game, breaking the record for three games in a match. The following is the score:

Winner in first class, G. McLean.

		Games.	Pins.
1.	G. McLean	36	5580
2.	G. Anderson	36	5535
3.	C. Longinett	36	5496
4.	L. Brown	36	5444
5.	J. Westcott	36	5443
6.	I. Kennedy	36	5427
7.	R. Heron	36	5416
8.	G. Craig	36	5155
9.	Wm. K. Harris	36	5030
10.	R. Kift	36	4981
11.	W. Baker	33	4692
12.	E. Lonsdale	24	3339
13.	W. Colflesh	15	2083

Winner in second class, G. Campbell.

1.	G. Campbell	36	5286
2.	J. Nisbet	36	4926
3.	J. Crawford	36	4552
4.	M. Rice	36	4495
5.	A. Lutz	36	4474

Winner in third class, C. A. Knapp.

1.	C. A. Knapp	36	4636
2.	G. Watson	36	4627
3.	W. Craig	36	4494
4.	G. Thomas	36	4362
5.	W. Fancourt	33	4259
6.	W. Eaton	36	3817
7.	F. Ehret	36	3793
8.	F. Whiteley	15	1469
9.	D. Bearn	12	1429

Toronto.

Mr. Jos. Spring, late head gardener to D. J. Hoskin, of this city, takes his departure for Chicago next week in search of something better. Mr. S. has had under his charge a fine collection of orchids, stove and greenhouse plants, etc., and always had a fine show of bloom in his houses. He was also very successful in growing chrysanthemums last year, taking firsts in many sections. Mr. Chas. Glitherow, the second gardener, will succeed him.

Flowers of all kinds in season are plentiful and prices low. Trade is just fair for Lent.

The Gardeners' and Florists' Association had a treat one night last week at the Public Library, where all the horticultural works had been gathered together into one room. About 50 members availed themselves of the opportunity of seeing some of the best works in existence. The orchid growers found it hard to tear themselves away from "Reichenbachia;" landscape gardeners wanted to spend the night with "Les promenades de Paris;" others buried themselves in botanical books and musty old volumes that seldom saw the daylight. Altogether a most pleasant and instructive evening was spent; may it be repeated at an early date.

E.

A GOOD EXAMPLE OF HOW NOT TO DO IT.

Indianapolis.

The chrysanthemum show committee of the Society of Indiana Florists met in this city March 23, there being present Messrs. Dorner of Lafayette, Hill and Bissel of Richmond, Coles of Kokomo, Hunt of Terre Haute, Carmody of Evansville, Stuart of Anderson and Rieman, Wiegand, Huntington, Hartje, W. and J. Bertermann and Truemper of this city. Every one of the committee was interested about making the next exhibition superior to any yet held; this will be our sixth annual show and it will be held from next November 15 to 19 inclusive. An artistic certificate of merit has been designed and will be issued to winners at the next exhibition. The regular premium list amounts to about $1,000 and there are good prospects for a very liberal list of special premiums also. A premium of $100 will be offered by the Indianapolis Florists' Club. It was decided to have music afternoons and evenings during the exhibition. Another meeting of the committee will be held at the Washington convention of the S. A. F. The officers of the exhibition committee are Fred Dorner, chairman; William J. Berterman, secretary, 37 Massachusetts avenue, Indianapolis; John Hartje, assistant secretary; F. C. Huntington, treasurer.

A few beautiful specimens of La France, Bride and Mermet roses were shown at the meeting by Walter Coles of Kokomo; they were very fine. B.

Montreal.

The annual meeting of the Gardeners' and Florists' Club took place on the 22d inst. The secretary's report showed a membership of 79, the number of papers read during the year 16, beside which the question box has been used largely and many interesting discussions resulted from its use. The treasurer's report showed that the expenses had just about swallowed up the income (the chrysanthemum show being answerable for this chiefly).

The elections were then proceeded with and resulted as follows: Pres., Jas. McKenna, re-elected; 1st Vice-Pres., John Walsh, re-elected; 2d Vice-Pres., George Trussell, re-elected; Sec'y, H. Stocking; Asst. Sec'y, J. Kirkwood; Cor. Sec'y, Jos. Bennett; Treas., J. Dunbar; Com., A. Wilshire, J. Perrin, Geo. Robinson, Jas. Nairn and W. Ward. C. Campbell, J. Eddy and J. Nairn acted as tellers. During the time the ballots were being counted T. McAnulty amused the boys with a couple of songs. The "professor" could not be prevailed upon to assist this year as he was only just recovering from an attack of the "grip." We are going to try some experiments with judging at our spring show. Will report how they turn out later on. The spring exhibition will be held April 13 and 14. J. B.

St. Louis.

Trade during the past week has been very satisfactory. The weather has shown a tendency to improve for we have had a few days of sunshine. The lack of this necessity has given the growers just cause to grumble during the past season.

Mr. A. Meyer grows a large stock and variety of ivy leaf geraniums. His favorite seems to be Chas. Turner, which is indeed a fine variety. He also goes in quite heavily for mignonette. Your correspondent found everything in tip top order at the above establishment and he takes pleasure in saying so.

The flower stores just now are, for the most part, decked with spring array and are veritable places of beauty. The windows of the Jordan Floral Co., Young & Sons, and the Ayres Floral Co. are especially attractive.

The last named firm were showing some extra fine cinerarias when the writer visited there last.

Mr. Armstrong is growing some fine carnations and hybrids. Sanders & Beneke have just had plate glass put in their store windows. J. W. D.

Cincinnati.

Mr. Walter Gray, the rose grower at College Hill, has only recently recovered from a severe attack of quinsy.

Joseph Scholz has taken unto himself a wife.

Ernest W. Mack has succeeded F. A. Peters at Price Hill.

George Magrie has succeeded to the business of his father, late of College Hill.

A Good Example of How Not to Do It.

The illustration is the reproduction of a photograph that I found at a prominent photographer's, which was by no means the worst that he had.

We of course realize that this class of work is far below the average, but it is well for us to know that such work is being turned out every day and in a manner comes in direct competition with us all and indirectly affects the whole trade.

Is it any wonder that there is a cry against funeral designs when such *designs* are let loose on a confiding public?

I count four dozen roses, but not one rose leaf. See how carefully and with what success the "valley" is concealed. We know that there is such a thing as color blindness and this cross would lead one to think that there is such a defect as proportion blindness, else how could anyone that had ever looked at a symmetrical cross ever commit the error so marked in this one.

It is possible to place a cross at such an angle when it is being photographed that it will seem out of proportion, but this is not the case in this instance, as you will notice that eight roses are used on each arm and only four on top. In addition to the forty-eight roses we count the following named flowers: 24 bouvardia, 12 carnations, 12 valley, 10 Maiden Hair ferns, 10 roses, 12 forget-me-nots and a little smilax.

We contend that by leaving out all of the above named flowers and using plenty of rose foliage not only would the effect have been better but the profit greater.

H. H. BATTLES.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By experienced gardener, single, age 25; English. Private place preferred. Best of references given. Address
E S, 294 Juneau Ave., Milwaukee, Wis.

SITUATION WANTED—By a young man; good plantsman; single. Private or commercial. Would like position in the west. Address
JOHN MCCORMICK, 542 E 82nd St., New York.

SITUATION WANTED—By married man, aged 28, as gardener, private place preferred; references good from last place where I worked 5 years. Address C L, care American Florist.

SITUATION WANTED—By a good gardener; first-class rose grower and forcing bulbs. Married; German; 10 years' experience in both country.
C D, care A. Gundersen, 157 N. May St., Chicago.

SITUATION WANTED—By a thorough, practical florist and gardener private or commercial place, 8 years' experience. Best of reference. Address, stating wages. H. OLSEN, 25 Fry st., Chicago.

SITUATION WANTED—By a gardener of thorough experience as propagator and grower of decorative, stove and bedding plants. Commercial place preferred. First-class recommendations.
JAS. POWER, 67 Bromfield St., Boston, Mass.

SITUATION WANTED—In a wholesale store by a young man of 22. Has worked several years in the flower trade; is a competent bookkeeper; graduate from business college; good penman. A 1 references. Address H K, care American Florist.

SITUATION WANTED—By an experienced florist, age 32 years, single. Scotch (American born); 12 years' experience in the growing of cut flowers, plants and vegetables, and the selling of the same; and also in making up designs, etc. Private or commercial. Best of references W A C,
care Hoopeston Floral Co., Hoopeston, Ill.

WANTED—One thousand rooted cuttings of Mme. Millet Violet. Must be healthy. Address
SCHROEDER BROS., Poughkeepsel, N. Y.

WANTED—Man to work in greenhouses. Address with references, and wages desired.
THE HUNTSMAN FLORAL CO., Cincinnati, O.

WANTED—To buy for cash, a small nursery or greenhouse business near Philadelphia. Address S J B, P. O. Box 937, Philadelphia, Pa.

WANTED—To lease or buy several greenhouses, some ground, with or without dwelling, near good market. W J, 95 Wakeman Ave, Newark, N. J.

WANTED—An experienced rose and carnation grower about June 1st. Wages $25 per month and board. Address
DUDLEY & CARNEY, Parkersburg, W. Va.

WANTED—A first-class man, experienced in vegetable and fruit growing. Private place. Must speak German. Good wages paid. Address, naming references in application,
Box 27, care American Florist, Chicago.

WANTED—A practical florist; must understand growing cut flowers, specially roses and carnations; also making up designs. Single man—German preferred. Wages $25 per month, with board. Address OTTO BAUMAN, Manistee, Mich.

WANTED—Immediately, a sober, reliable man to assist in greenhouse work, single preferred; must speak English, wages $20 per month with board, steady employment to right man with prospect of a rise. THOMAS GORDON, Mt. Clemens, Mich.

WANTED—A good rose grower who has had experience in growing other stuff; must be honest, sober and respectable; best of reference required. Address stating wages wanted,
I. W. & T. W. WOOD, Chase, Allegheny Co., Pa.

WANTED—For a large place in Chicago, 55,000 ft., where roses, cut flowers, palms, orchids, blooming and bedding plants are grown and everthing retailed. A No. 1 man, who if able and proves satisfactory, can be manager and get raised; married or single; $30 and board to start on. Must be able to manage the men, and come well recommended. Must love flowers more than beer. ALBERT FUCHS, Evanston Ave. and Sheridan Boulevard, Chicago.

WANTED—A thoroughly reliable man who understands growing of greenhouse stuff, flowers and vegetables; also growing of vegetables and small fruits outside, and landscape gardening. Must be a single man, strictly temperate in all his habits, and able to command the respect of a class of boys whom he would have under his charge to do the work required. A young man not more than 35 years old preferred. Salary $40.00 per month with board, room and washing.
J. W. BROWN, Supt., Red Wing, Minn.

FOR SALE—At a bargain, a florist's business in a thriving city near St Paul. Proof profits for 1891 over $1,300. For particulars address
SELLER, care American Florist.

FOR SALE—Small greenhouse attached to dwelling house. Everything in good condition, and room for extension if desired. Will sell entire property. Address MRS. Z. M. CHURCH,
219 Terrace St., Janesville, Wis.

FOR SALE—Right away, as good as new, a Kroeschell hot water boiler like cut in AM. FLORIST; 2 years old; 5x9 ft., 4 inch flues; cost $360, will sell for $250; also the 6,000 feet of 4, 5 and 6-inch pipe that was heated by same, at 8c. cash a foot; fittings half price—all from our place. ALBERT FUCHS,
Evanston Ave. and Sheridan Boul., Chicago.

BOILER FOR SALE.

In good condition, 4½ ft. long, 4 ft. wide, 17 3-in. flues. Will heat 1,500 feet of pipe.

WISCONSIN FLOWER EXCHANGE,
131 Mason Street, MILWAUKEE, Wis.

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following. Speak quick if you want them.

We want to create a little diversion for Easter (April 17). To accomplish this we offer as follows in plants:

	Per 100
Genista pubescens, 5-inch in bloom	$ 25.00
Azaleas, 6-inch, in bloom	100.00
Fuchsias, 2 to 3 ft. high, 6-inch, in bloom	20.00
Hydrangeas, 6-inch, in bloom	20.00
Roses, Mme. Gabriel Luizet, 6-in. in bloom	25 00
" Gen. Jack, 6-inch, in bloom	25 00
" Mrs. Jno. Laing, 6 inch, in bloom	25.00
" Ulrich Brunner, 6-inch, in bloom	40.00
Lilium Harrisii, 4 to 10 blooms	50 00
Callas, 5 to 8-inch, in bloom	20 00
Cinerarias, 5-inch, in bloom	15.00
Carnations, 5-inch, various colors, in bloom	12.00

All the above in splendid condition for Easter sales.

In Cut Flowers we offer the following. Send in your orders and have them booked ahead.

Roses, American Beauty, A 1 stock.
" Bride.
" Mermet.
" Laing.
" Bennett.
" Brunner.
Callas.
Harrisii.
Carnations, white and red.
Marguerites, large blooming white, large elegant plants, 24 to 30 inches high, full of bud and bloom, just the thing for Easter work. Will pack light. $15.00 per 100.
Smilax, we have 1,500 strings to offer, medium length and stock A 1. If you are going to buy smilax in small or large quantities in the next thirty days don't fail to write to us, as we are in the market to sell.
☞ Bottom prices on any of the above.

ADIANTUM CAPILLUS VENERIS—The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. If you are short of room now we will book your order and ship any time up to May 15th. **Price, strong plants, $8.00 per 100.**

For bargains in Plants, see issue of March 24.

JOHN IRVINE CO.,
BAY CITY, MICH.

Dracæna indivisa, 12 to 15 inches,	$5 per 100	
Vinca major variegata	$4	"
ROOTED CUTTINGS.	**Per 100**	**Per 1000**
Ageratum Cope's Pet	$.50	$4.50
Alternanthera aurea nana	.50	4.00
" parch. major	.60	5.00
Heliotrope, mixed	.50	5.00
" Queen of the Violets	.75	6.00
Coleus, bedding vars	.75	6.00
Fuchsias, mixed	1.00	
Verbenas	.75	6.00
Carnations Hinze's White, strong	.60	5.00

JOHN J. CONNELLY, Bryn Mawr, Pa.

Canna Mme. Crozy.

The grandest novelty of the season. Unsurpassed as a decorative flowering plant for the flower garden or conservatory. Magnificent cut flower. Color dazzling vermilion bordered with gold. $8.00 per dozen; $50.00 per 100.

WM. TRICKER, Dongan Hills, (S. I.) N. Y.

50,000 IPOMEA PANDURATA.

(New Hardy Blooming Moon Flower.)

No 1 roots, large and strong, at $3.00 per 100 50 at 100 rate. $25.00 per 1000 500 at 1000 rate
GERANIUMS, named, 2½-in. pots$3.00 per 100.
" rooted cuttings.. 1.00 per 100.

OUR DIRECTORY.

Our Directory for 1892 is now ready for distribution. The book appears much later than the date originally promised, but the delay has been caused only by our earnest endeavors to get the work as nearly correct and complete as possible.

Some new features of the present publication have taken us over hitherto untrodden ground entailing a vast amount of labor. Then, the business changes constantly going on, our rapid horticultural growth and the difficulty of obtaining exact information from every little community renders it next to impossible that such a work should be entirely free from errors. But no available source of information has been neglected and no expense spared to make this edition an invaluable reference book for every one in any way connected with the trades represented, and we now offer it to our patrons with feelings of pride convinced that this volume is the best of its kind ever published.

To our numerous friends and correspondents throughout the country who have so cordially assisted us in our work of revising and compiling we desire to express our sincerest thanks. Many of the florists, seedsmen, cemetery and park superintendents and others have given us much generous and indispensable help, and in every direction we have received ever ready and cheerful courtesy. To this kindly co-operation we feel that the standard of excellence which has been reached in the present volume is largely due, and we take this means of acknowledging gratefully our indebtedness to all those who have so unselfishly aided us in the work.

Toronto Notes.

At Toronto there are many gardens of unusual interest to the lover of horticulture and there are many examples of old fashioned gardening in its truest sense not to be met with on the other side of the line, an inheritance as it were of the European school, more especially British; this applies to indoor gardening more properly speaking and to the whole Dominion.

With such men as George Vair, John Chambers, William Huston, George Reeves, Arthur Ewing, Joe Spring and many others taking the lead in private horticulture we may rest assured that great advances as in the past will be made in this particular branch in this city, the "Chicago of Canada."

John Chambers, the jovial superintendent of parks, has done much to improve the city with its lines of trees and many beautiful parks, and the city well appreciates his efforts in this direction. The city greenhouses, situated in the beautiful exhibition park, contain besides their immense stock of bedding plants quite a number of tid-bits in the way of new and rare plants, and as "John" takes a special interest in their well-being it is not to be wondered at that they are well worthy of a visit.

The stove house contains many well flowered orchids, the principal of which noted during a recent visit were, Calanthe vestita with spikes averaging 18 to 20 flowers; Phalænopsis amabilis, very useful for florists; many cypripediums, including such useful varieties as C. Spicerianum, C. Harrisianum, C. insigne, etc.; well flowered pieces of Cymbidium Lowianum, Angræcum sesquipedale, Vanda Amesiana and some rattling good pieces of Dendrobium Wardianum and others. Cattleya Trianæ was also well represented. The "Flamingo" plant (anthurium) with its bright red spathes is used both for cutting and for brightening the houses in winter when color is scarce. A. Andreanum, A. Ferrierense, A. Scherzerianum and the newer varieties, A. Clarkiana and A. Reynoldiana, not forgetting the gem, A. Rothschildianum, are among the best and are well grown here.

Of palms that look well in their young state and are useful for growing on in the stove, Livistona rotundifolia, Phœnicophorium sechellarum, Verschaffeltia splendida and Cocos Weddeliana rank high. Maranta Veitchii and M. Mackoyana are also excellent. MORE ANON.

WE HAVE received from Mr. John H. Dunlop, Toronto, Ont., some very handsome blooms of the roses Toronto, Viscountess Folkestone and Miss Ethel Brownlow. The Toronto is a sport from the Perle des Jardins that originated with Mr. Dunlop. The blooms sent were beauties, of very large size, rich golden yellow in color and borne on strong stems dressed with handsome foliage. The other roses were also good, but a first class yellow rose, better than the Perle, is something we need more than additional pink toned sorts. Toronto promises well. May it prove to be the new yellow forcing rose we have been looking for.

News Notes.

INDIANAPOLIS.—G. C. Lange has succeeded Mr. Lorenz Schwartling as florist at the Central Insane Hospital.

LAWRENCE, MASS. — Moses Wingate, senior member of the firm of M. Wingate & Son, died on March 18, at the age of 69.

COSHOCTON, O.—M. J. Schott has started in business here with a greenhouse 21x62, erected in good style with all modern improvements. Coshocton is a growing town of 5,000 inhabitants and this is the first florist establishment started here.

MILWAUKEE.—One of our florists did quite a lively trade in Shamrock March 17. He had it in 2½-inch pots, which sold at 10 cents each like hot cakes. The floral "Harp of Erin" in his window pleased many from the green isle who had probably never stopped to look at flowers before. A large green bow caught their eyes at once.

NEW HAVEN, CONN.—The indications at present are that there will be no chrysanthemum show here this year. These exhibitions have been held in the name of the Ladies' Chrysanthemum Club, with the co-operation of the florists. Of the proceeds a certain amount has been applied to premiums and the balance devoted to charitable purposes. The amount paid for charity last year was $525. In January of this year at a meeting of growers held for the purpose a schedule of prizes was adopted that would have given New Haven the best show in her history, but which on presentation for acceptance by the Chrysanthemum Club was so amended by that organization in regard to concessions demanded from exhibitors as to be unacceptable to the growers. After several conferences and considerable correspondence negotiations were finally dropped, it being evident that the leaders of the club are not disposed to grant the growers a fair recognition of the trouble and expense necessary to prepare a good show. If the New Haven growers are wise they will in the future steer clear of all connection with public charitable organizations.

The Seed Trade

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

F. S. WHITE, the Des Moines seedsman, has been robbed by parties who secured duplicate key to his P. O. box. The thief has been caught and will be prosecuted.

SAN FRANCISCO.—Emory E. Smith has been appointed professor of horticulture at the Leland Stanford University.

OVERVEEN, HOLLAND.—William Byvoet of Byvoet Bros., died March 7, aged 62 years.

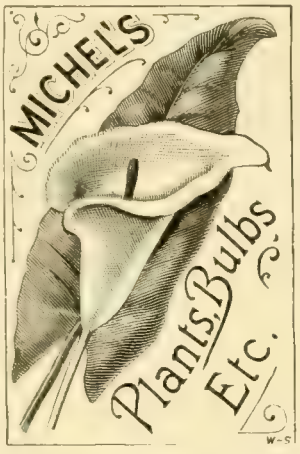
The World's Fair.

The actual work of the horticultural department at the World's Fair grounds has been a good deal retarded by the late cold weather, but Mr. Thorpe is now getting his forces to work at Jackson Park.

Those who have not been on the ground can hardly appreciate the amount of work to be accomplished before the opening of the Fair. The ground has had to be reclaimed from a mixture of swamp and sand hill by dredging out the "lagoons," and buildings sufficient in themselves to form a large city, built, before the ornamental features of the landscape could be attended to. The space devoted to the outside display will consist of the island known as the "Wooded Island," and a strip in front of the Hort. Hall, and between the Hall and Stony Island avenue, where the greenhouses are situated. Eight greenhouses are now nearly completed.

Shipments of roses are arriving from Europe, and many others are on the way. One interesting consignment of 1,550 plants is coming from Alex. Dickson & Sons, Newtownards, Ireland.

Several consignments of pansy seeds have already arrived in response to the circular sent out on the 21st inst.



Chief Thorpe has been laying out plans for the roof garden of the Woman's Building, and supplied Mrs. Palmer with a list of plants that should be obtained. The space laid out for this purpose consists of two courts about 75 feet square, at each end of the building, connected by a passage overlooking the Fair grounds at the south end, and presenting a good view of the grounds allotted to the different states.

Chief Samuels returned from Kentucky on Saturday. He addressed the Legislature on the necessity of the State making an appropriation for the Fair, and reports there is every likelihood of $75,000 being set aside for that purpose.

Under date of March 21 the horticultural department issued a circular inviting contributions of pansy seed of best varieties, in quantities sufficient to insure at least 250 plants of each at the time final planting is made. Two sowings of each kind will be made, one in July and one in August. The pansies promise to be a very important feature in the early months of the exposition and will show visitors in a very convincing way the immense strides made in the cultivation of this popular flower during the past few years.

THE HOWICK HOUSE
Collection of Orchids
ABSOLUTELY WITHOUT RESERVE.
UNUSUALLY IMPORTANT SALE
— OF THE —
Whole of this Celebrated Collection of Orchids,
Formed by the late EDWIN GRUNDY WRIGLEY, Esq., the whole being in splendid condition, and including many plants of exceptional merit and rarity.
MESSRS. PROTHEROE & MORRIS are favored with instructions from the Executors of the late E. G. Wrigley, Esq., to sell by Auction, on the premises, Howick House, Preston, Lancashire (about 2 miles from Preston Station), on TUESDAY, APRIL 5, 1892 and three following days, without the slightest reserve, the whole of this extensive and most important collection of established Orchids.
The whole of the plants will be submitted to public competition, and nothing sold privately before the sale.
Catalogues are now in course of preparation, and may be obtained of MR. HOUGH, The Gardens, Howick House, Preston; and of the Auctioneers, Estate Agents, and Valuers, 67 and 68 Cheapside, London, E. C.
N. B.—The Auctioneers fear the catalogues may not reach their clients in America in sufficient time to enable them to instruct their Agents to purchase any of the plants. They have therefore forwarded a preliminary Circular to these clients containing a list of some of the most attractive plants and will be pleased to send a copy of this Circular to any gentleman on receiving his application.

F. R. PIERSON CO.,

TARRYTOWN-ON-HUDSON, NEW YORK.

A General Invitation.

We have received a note from Mr. John Westcott, chairman of the banquet committee of the Florists' Club of Philadelphia, asking us to extend through the FLORIST to the members of the various florists' clubs throughout the country and to the members of the S. A. F. a hearty invitation to be present at the Philadelphia club's banquet, which takes place Wednesday evening, March 30, at Horticultural Hall, in the city of brotherly love. Though the affair will have passed by the time this issue reaches our readers we know they will appreciate the hospitable invitation.

Angle Worms in Rose Beds.

Will some reader of the FLORIST inform me as to the best way to get rid of angle worms in rose beds? The soil in my rose beds has been infested with these all winter. Are they injurious to the roses?

Atchison, Kan. THOS. C. GARNER.

CINCINNATI.—S. S. Jackson died recently, aged 89 years. He was probably the oldest nurseryman in America. He was in business near this city for over 50 years and was a charter member of the old Cincinnati Horticultural Society, now practically out of existence.

THE LATE Geo. W. Wilson, of Malden, Mass., was an eccentric character. It has been said of him that he "could get more information out of others without answering a question himself than any other man in the United States."

THE FOURTH annual exhibition of spring flowers of the Montreal Gardeners' and Florists' Club will be held April 13 and 14.

BEGONIAS

(TUBEROUS.)

During more than 15 years we have made a specialty of them, and by crossing and selecting succeeded in getting a strain of **low, very free-flowering plants with broad leaves and upright flower-stalks, bearing such exceedingly fine flowers and so varied as to color, as scarcely will be found elsewhere.** We recommend them as far superior to those commonly met with. We offer **fine, strong tubers** at following very low prices:

	Per 100	Per 1 00
Mixed, fine quality	$4 00	$35 00
" extra selected	6 00	50 00
Separate colors, extra	7 00	60.00

Smaller tubers 20 to 30 per cent less.
Double mixed, fine large flowers...$10 to $20 per 100
Splendid named doubles.....$3 to $10 per doz.

Tuberous Begonias are free from import duties. Costs of freight prepaid from Holland to New York. For 250 tubers or less, $1 25; for 500, $2 00; for 1000 to 1300, $3 25; for 2500 to 3300, $5 00

Terms for unknown correspondents, cash with order or good references.

ZOCHER & CO., Haarlem, Holland.

Edmund M. Wood & Co., **NATICK, MASS.**

"Awful Prices Paid for Flowers."

A southern florist sends us an order recently received by him and we give it below. Our title, which we have placed in quotation marks, is copied from one of the daily papers. Here is the order.

"Please send me two corsage bouquets; as pretty as you can for ten cents each. I send the money."

The only pleasant feature about the order seems to be the fact that it was accompanied by the cash. Our correspondent does not state whether the amount was in currency or in the form of a bank draft. He writes: "These bouquets were to adorn lovely woman who was paying $4 a ticket to hear the immortal Sarah Bernhardt. Were I to steep my being in ink until thoroughly saturated, then slowly exude it, perspire it at every pore upon the pages of the FLORIST page and ink would fail before my feelings were fully justified. Have pity upon my soul, ye affluent florists of the north. A corsage bouquet for ten cents!"

Keep the Weeds in Beds.

A gentleman in England had an untidy gardener. Walking round the garden with him one day he said: "Gardener, what do you call this plant?" "Groundsel, sir." "Groundsel is it; well, I wish you would keep it in a bed by itself and not let it grow all over the place so."

G. M.

LITTLE'S ANTIPEST.

— A —
Valuable Discovery of the 19th Century.
SILVER MEDAL AWARDED
— BY THE —
CALIFORNIA STATE FAIR OF 1890.

This preparation Is a sure destroyer of the **Scale, Wooly Aphis** and **Insect Pests** of any and all descriptions. It may be as freely used in the conservatory, garden and greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportion. It is **Safe, Sure** and **Cheap.** No fruit grower or florist should be without it.

Send for Circulars and Price List.

R. W. CARMAN, General Agent,
291 AMITY STREET,
FLUSHING, Queens, Co., N. Y.

The Nursery Trade.

Rochester, N. Y.

The Caminetti bill is killed, we are inclined to believe, but it may come up again in a new form.

The nursery trade opens well, as a rule, yet some complaints are made that agents' sales are not as large as usual. It is worthy of note that the agents of some firms are doing the usual business, showing that much depends on the man at the helm.

Our firm does not run agents, but sells direct to fruit growers. Our trade has never been so large as this season. But the fact remains that agents will always sell the bulk of all nursery stock, as most people are not sufficiently interested to buy trees unless forced into it. The honest agent does good missionary work and should be encouraged. The difficulty is to learn who the honest agents are. But there are many such.

Nursery stock has wintered well. There is a good stock of most items. Dwarf pears and apple trees are perhaps more scarce than anything else.

Rabbits are doing more and more injury to nurseries and orchards each year. When I was a boy I had not seen a wild rabbit and yet I was a hunter. Now they are started from every fence corner. Query—will the rabbit become a great nuisance here, something as they are in Australia? CHAS. A. GREEN.

Sweet cherries, peaches and Bartlett pears show signs of being hurt by the winter.

In the ornamental departments the increasing demand for native trees and shrubs has been the most noticeable feature of the trade for the past two or three years and this spring the demand seems to be larger than ever.

There is more frost in the ground here now than there has been at any time this winter, and nurserymen with orders from the trade in the south and southwest are beginning to get a little anxious about digging their trees. The indications now all point to a late start. L.

Waban, Mass.

The indications of a lively spring trade are more than usually promising. In the vicinity of Boston the demand for choice ornamental trees and shrubs is increasing, while the inquiry for fruits is rather diminishing. The fine colors of the Schweidler and the Japan maples are becoming more known and the demand for these is brisk. There is a manifest call for variety in form and coloring which is much to be desired. We want relief from the regular, monotonous rows of sugar maples. The demand for Clematis paniculata is likely to exceed the supply of this robust and excellent climber. Several new varieties of Japan lilies, the new Dawson and Wichuraiana roses, the weeping lilac and the Japan giant lilac attract attention this season. The demand for rhododendrons is increasing. Cultivators are becoming educated to understand the superiority of budded or grafted roses over those on their own roots. We may hope in the near future for a stock for budding which will prove superior to the Manetti or the Dog rose. It is also to be hoped that duty may be enforced upon imported roses and that our markets may be amply supplied with a home product. S.

EVERYTHING —IN— FINE TREES, Shrubs and PLANTS CHEAP

2000 American Arbor-Vitæ, 2 ft. fine bushy, 3 times transplanted and sheared, at $1.50 per doz.; $10 per 100.

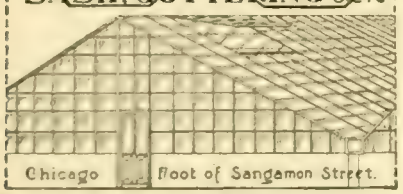
Gas Tar on Hot Water Pipes.

The only effectual method of ridding pipes of gas tar is to burn it out. Several years ago the owners of the place I now lease painted the boiler and pipes with gas tar with the idea of preserving them. The experiment is not likely to be forgotten in this locality. The stock was utterly ruined. Scraping and other methods were used, but all failed and all the pipes were disconnected and burned "red hot" in large wood fires. This of course was successful. F. A. D.

Animal oils will dissolve the gas tar on Mr. Fraser's hot water pipes, and a lye made of wood ashes will take both off together. It would facilitate the cleaning job if the pipes were moderately warm during the operation.

DARLINGTON BROS.
Morristown, Tenn.



"Chryses."

Some years ago I asked a boy his name. He answered promptly, "Chris, but most people call me Christopher for short." Some of the abbreviations suggested for chrysanthemum remind me of this reply.

If "chryses," which I consider the only correct abbreviation, is too long, I suggest what I have often heard them called, viz., "Chrysticanthums."

THE Society of Indiana Florists has issued an advance premium list for its sixth annual chrysanthemum show, to be held at Indianapolis November 15 to 19 next. The leading prize is for ten plants, one of a kind, $100 for first, $75 for second and $50 for third. Copies of the list may be had on application to the secretary, Wm. G. Bertermann, 37 Massachusetts avenue, Indianapolis, Ind.

THE THEORY OF DESIGN IN DECORATION

II.

Church Decorations.

There are especial features in architectural style which are as unmistakable as the personality of the friend with whom we are intimate; his face, his carriage, his voice and his gesture, are each without the other, sufficient for perfect recognition. We may shut our eyes and the simple tone of voice in a "Yes" or "No" bespeaks our friend.

Now the character of true architecture is much the same; the principle which governs the style is quite as apparent in the door or the window as in the general plan of the building.

Usually architectural style is decidedly pronounced in a church edifice; and it therefore follows that nowhere should we be more careful about the character of our floral decorations than here.

Let us take, for instance, a church of the ordinary Gothic type. Look within at its lines, the perpendicular ones are predominant; before they reach the roof they branch out in strong, subtle curves much as do the branches of our American elm; see Fig. A. Where may we find any circles, round arches or horizontal lines? There are few, if any. This is the first thing we need to learn before we begin with any scheme of decoration. At once we should seize upon the especial feature which characterizes the architecture. It is not impossible in the employment of flowers for decorating the church, that we may carry out this principle still

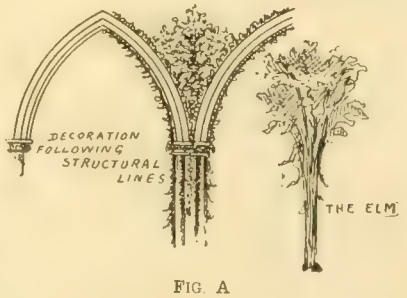

FIG. A

farther, or emphasize it by some contrasting features. There is no flower so admirably calculated for Gothic surroundings as the Lilium Harrisii; look at the stalk and leaves, they speak for themselves. At the base of some column or cluster of columns near the Chancel, group the lilies as in Fig. B, and note how well they agree with the surroundings. About the base of the lilies just those charming little "low down" flowers like the violet and primrose are quite in place; it needs only a clever hand to adjust the flower pots, the moss and the bits of green to make the whole appearance natural and unconventional. Occasionally at the front of a square or octagonal pulpit we have seen the much abused

FIG. B

"emblem," perhaps an anchor, a cross, a wreath, or even a pendent cushion with the word "Easter" thereon. It is unnecessary for me to describe exactly the effect such things as these produce on one's mind; I fear to say anything lest it should be sharp and unjust.

The object just before us is not to discuss or criticise conventionalities, it is rather to break away from them and open a clear straight path to newer things which may possibly prove better than the older ones.

A wreath in the Gothic church is almost out of place, a festoon is most certainly an ill-fitting feature, for instance, where in the name of all that is common sensible is there any relationship between a festoon and a pointed arch arranged as in Fig. C.

As I have said in a previous article, if there are any *lines* needed for artistic effect by all means let them subordinate

themselves to the structural ones (see Fig. A), which the architect composed on an art principle, or else he did not understand the primary meaning of the word. I should not festoon the pulpit. I should not wreath the altar. I should first study

FIG. C.

the *lines*, then if I saw an opportunity with an eight cornered affair to do something like Fig. D I should do it. There can not possibly be any objection to a flower covered cross; my own preference would be a silvered one, tastefully arrayed with such roses as the Cornelia Cook, the Bride or the Niphetos, with their foliage. I do not see why the material forced into the compact flower cross could not be utilized to better advantage. I cast certain commercial reasons aside; of course if one is ordered to make up such a cross there is no alternative, but that does not alter the artistic side of the case.

That honest structure should be perfectly apparent where it is practicable is one of the cardinal principles of the true theory of design; on *that* principle I think the flower cross is not quite honest, nor is there any common sensible basis of reasoning which can prove anything to the contrary. The spirit of the emblem does not require the forcing of material into shapes incongruous with it.

FIG. D

Over the altar there may be an opportunity for the decorator to make the cross beautiful, my rude sketch (Fig. E) is merely a suggestion for its general appearance.

If the perpendicular lines in the chancel can be rendered beautiful by green, twine the smilax, laurel or other green material spirally about columns or parallel with mouldings.

It may be suggested that the spiral has nothing in common with Gothic ornamentation, but the single fact of the beauty of the apprentice's pillar of Roslyn Chapel in Scotland will prove something to the contrary. Twine garlands by all means wherever there is opportunity; the beautiful effect produced will speak for itself. Now, what can we say about banks of plants, azaleas, cinerarias and all such? These may be so easily adjusted to open spaces, shady corners and prominent positions that with a word of advice we may dismiss this branch of the subject. Be careful again about color effects, centralize the strongest color and keep all the structural forms of the plants in sharp contrast with each other.

Behind the altar comes the best opportunity for the decorator. In all likelihood there are tablets with pilasters between, the latter are well defined positions for lily clusters; the tablets, if it is desired, are good spaces for a backing of solid foliage, relieved at the base by a horizontal row of white carnations, narcissi or freesia, arranged as in the sketch (Fig. F); here the cross will be well relieved, and either side of it two silver vases of delicate tinted roses (I would not always use white) would greatly accent the artistic arrangement.

The brass reading desk is another position for flowers on stalk; no banking effect there would be of any artistic value. Perhaps below the pulpit the space can be banked to great advantage and the azalea, cineraria, narcissus and ferns can all do good service in such position.

Now as to the font, we will add nothing to artistic effect if we overburden it with a pyramid of compact flowers; this is so often done, and the waste of material is so perfectly apparent, that it is a pity we do not adopt some other plan for its decoration. It seems as though a *bed* of small narcissi, of violets, or of primroses would be quite in place here, and why not a central cluster of fine well formed callas.

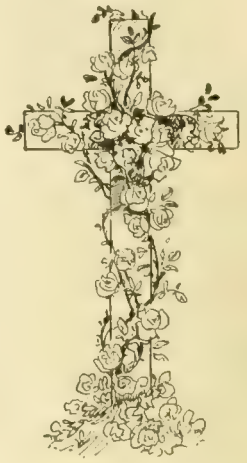

FIG. E.

Those flowers which like the iris are aquatic in character seem *most* appropriate to such a position, but I suppose we could not follow this idea very closely. The florist decorator, however, who has at his disposal material of an aquatic character will, if he adjusts it artistically, make his whole scheme of church decoration perfect by the contrasting appropriateness of his font decoration.

What a pity we can not employ the Egyptian lotus flower here, that flower had such a meaning to the ancients and is now beginning to have such a significance to us 3,000 years later!

We will leave our Gothic church now and consider one of another kind, Puritanic in character but Renaissance in actual type; what shall we do here, differing from what we have done in the Gothic interior? Both the wreath and festoon are exactly in place in Renaissance architecture, so is the turned pillar; here are horizontal lines in plenty, along which may be arranged potted plants or garlands of roses. Here there is a good broad desk in a central position, from the floor up to the very top edge of this we can group our potted plants with telling effect, and behind the desk, between the chairs, is a fine chance for splendid azaleas, a spreading array of these or of Lilium Harrisii arranged against the wall must be rich beyond description in effect, and at one's feet the homely flower pots may be hidden with banks of green moss, laurel, etc.

Spirea always looks to me, for some unexplainable reason, more at home in the Renaissance than in the Gothic church, perhaps because of its unconventional form and its absence of stiff lines. Let us use spirea in plenty if we have it, and we will do well to remember too that *balance* in the decorative scheme is of far less importance in this church than in the Gothic one; beside the desk, on one side only, we may make a strong point of some towering plants, the edges of the platform may be blooming with numberless plants all of unequal height and varying character, but the strong perpendicular lines of lilies should never break the horizontal lines of the platform; reserve the lilies for newels and desk corners.

It seems as though if we wish to use the words "Easter" or "He is Risen" in our decorations there are other methods of producing the letters better than that which employs flowers; we all know how defective the best flower-formed letters are; why do we persist in using such inadequate means to an end? The church text letter in my sketch (see Fig. G) is in better form and can easily be made from cardboard and silver or gold paper. Certainly a solid panel background of white carnations, deutzia or spirea is allowable and the cardboard letters are easily fastened to them. If colored letters are preferable use colored paper, but to my mind there is nothing gained in the flower letter; indeed, we need these flowers for something better, and further, why the panel should be *exactly* framed off with flowers it is hard to understand. We can begin with a stalk of lilies, or rather a crown cluster of them, then we can ease off our carnations with an irregular edge, a few blooms holding a drooping position. But to use more than two kinds of flowers and to force these into exact panel symmetry is to waste our energies in directions which have nothing to do with art.

FIG. F.

In regard to the Romanesque style, we have about the same regulations to follow as those given for the Colonial.

In the round arch we have a feature which has less of grace than of strength and which admits a freer principle for a decorative scheme than does the pointed arch. But in any event let our decorative work be appropriate and consistent; we must not be afraid to use plenty of green, and we *must* beware of the old fashioned conventional ways of packing flowers together. F. SCHUYLER MATHEWS.

Easter Decorations.

Easter is now close at hand and a few thoughts in reference to decorations of church and home may not be untimely.

The use of flowers at Easter as gifts and for home enjoyment is doubtless increasing every year. But we do not see the elaborate church decorations of former years, many of the churches that used to decorate extensively now confining their floral display to a solid cross of white flowers, a few pots of lilies or perhaps some slight trimming about the altar.

This decline from the former rivalry in extensive floral displays has been accounted for in various ways, the florists in their disappointment often attributing it to economy or parsimony on the part of those who control such expenditures.

But it occurs to me that possibly there are other and more creditable causes for the decadence of the fashion of large Easter decorations. Our churches are as a rule much more elaborate in interior ornamentation than they were a decade or two ago. Severe plainness in style and finish has given way to the other extreme of elaborate carvings, rich frescoing and gorgeous stained windows. The architect, fresco painter and gilder have taken the place of the floral decorator, and, without considering the injury apt to be done by the ladder, hammer and nails, it must be conceded that such profusely

FIG. G.

decorated interiors as most of our city churches now present will not admit of lavish floral deckings, especially as such work has generally been done.

The too common result of the conventional festooning and twining is to mar what is already perfect and to distort the lines of beauty and general architectural effect to such a degree that the sweetness and appropriateness of the flowers themselves are lost sight of, and people of taste experience such a shock to their artistic perceptions that they find themselves wishing the whole display were torn down.

Most frequently has this been the case when the enthusiastic young people of a church, whether from motives of economy, devotion or diversion, undertake to do the decorating themselves, without any plan or the slightest idea of any result to be accomplished other than to "hang up" the garlands and boughs according to the individual fancy of each, wherever a spot can be found to crowd them into. Hence it is not surprising that people of refinement have come to regard with indifference if not with detestation all attempts at such so-called decoration.

With the white walls and clear glass windows of the old time churches and halls it was a relief to the eye when the snowy columns were twined with the spiral strands of bright green, and the plain angular gallery fronts half hidden in the drooping loops of the same material, and the staring walls only served as a background upon which every spray, every tracery of green was brought out in beautiful distinctness. Given our old fashioned interiors to set them off and extensive Easter decorations would not be a thing of the past.

Yet there is nothing more appropriate or more suggestive of the true significance of the Easter festival than the flowers, and with a comprehensive plan carefully studied out and perfected by a true artist there can be nothing but the most gratifying results.

Such work can not be trusted to amateurs and volunteers. Intrust it only to one who has made the subject a study and knows how to work in harmony with the ideas of the architect and designer who have preceded him, in all his planning following scrupulously the lines which they have laid out, so that his work when completed will be but a part of a finished and perfect whole.

There is not a church in all the land so elaborate in finish that it can not be decorated with plants and flowers so as to heighten its richness and add to its beauty if the work only be placed in competent hands. Like landscape gardening this branch of the floral industry is yet in its childhood. The landscape gardener and the floral decorator of the future will be recruited from the highest rank and those professions will stand where they belong, in the same position of honor as the poet, the sculptor and the painter. S.

The Commission Man of the Future.

ACCORDING TO THE GROWERS.

He will sell out clean every day and in no instance will report any flowers as lost. But will admit without question that the grower himself could have sold the goods at a much better price.

He will never be guilty of the misdemeanor of questioning your count or of telling you that your flowers are not the best in the market.

He will sell for 10%, 5%, indeed he may be even willing after a while to pay a commission for the privilege of handling your flowers and will pay for every flower on the day they are received.

You may examine all his books whenever you please, in fact if you want to help him run the shop for half a day at any time you will be welcome.

ACCORDING TO THE RETAILERS.

A buyer may, if present, overhaul all the goods and select the best for himself. If at a distance he may telegraph at the expense of the commission man, who on his part will prepay all return telegrams.

On receipt of an order for anything which he cannot supply he shall immediately start out and scour the country for it and procure it at any cost, but shall in no case charge for it any more than the lowest price quoted within the past two

months. If the stuff is then not satisfactory he will at once cancel the charge and apologize. If he should fail to do this the customer will promptly withdraw his trade.

All buyers will be at liberty to make such alterations on his bills as they think proper.

No goods shall be sent C. O. D. and the prompt arrival of every railroad train on which flowers are shipped will be guaranteed.

He will sell nothing at retail.

If for any reason you wax angry at him he will immediately come to you and let you dance on him. COM.

De C'mishyun Man.

[A lecture delivered before the Blacktown F'orist Club by Prof Cha'k'ine.]

MR. PRES'DENT AN' GEMMEN: De time am now come w'en a man ken say a good word fer de c'mishyun man wivout runnin' de risk ob bein' mobbed. For sartin it am dang'rus in de wintah. At dat season de debil am poplarly b'leebed to make his headquatahs behin' de c'mishyun man's desk. Lawd knows I would not hab de t'merity to stan' yere 'bout Crismus time an' talk on de subjec' fer money.

Fustly, it am my desiah to 'press on you' minds de 'normous influence de c'mishyun man hab. Dah aint mo' den two scoah ob dem in de worl', and dem two sco' ken skeer up mo' trubble an' bad blood dan a whole poun' ob red peppah on de flo' at a weddin' dance.

Sec'n'ly, de greates' p'culariy 'bout de c'mishyun man am de way yo' done change yo' min' 'bout um. Las' week yo' would hab shot him at sight, to-day yo' lub him wif yo' whole hyart, nex' week de Law'd on'y knows jus' wat you' 'zact sentments will be. It am like de good ole hymn, De win' blow Eas' an' de win' blow Wes'.

Thirdly, my own 'sperence am dat de change ob affection am strickly in 'cordance wif de weathah, an' it take 'zackly opposite direction wif de retail dealah an' de growah. W-W-W'en de th'mometah am 'way down at de heels an' de snow fly, den de retailah he lub de c'mishyun man wif he whole hyart an' take keer dat he nebbah go home feelin' thirsty, but de growah he hab not de honah ob de c'mishyun man's 'quaintance. But w'en de spring days done come an' de growah hab to hiah 'noddah waggon to git all de stuff to town an' de cotton battin am locked up fer de season so de old lady kaint hook it fer bed quilts, den de growah he take great interes' in de c'mishyun man, but de retailah hab sudd'nly forgot dat de gemman hab a mout on him or dat he eber knew any such pusson. So de po' c'mishyun man he hab to walk in de same kin' ob a road dat Cristyan done trable in de Pilgrim's Progress, wif de deep miah one han' an' de hobgoblins on de oddah.

Finally, breddren, 'pears to me dere am too much back bitin' in dis yere floris' business. 'Deed it does. It am de gen'r'l impreshun dat a c'mishyun man hab no business to get rich, an if he done hab right smaht ob comfo'ts in de house it am regahded as suah proof dat he hab done stole de money.

Dat de audience may undahstan' dat I doant 'zackly 'scribe to dat sent'ment, I will 'speckfully reques' any c'mishyun man dat may be in de hall to pass de hat, w'ile we join in singin' de followin' hymn w'ich am embl'matical ob de or'nary relations between de growah an de retailah:

"Carve dat possum,
Carve 'im to de hyart."

Easter Plants at Home.

Easter flowers seem a necessity now; their vogue increases year after year, both for church decoration and home use. The lily trade alone is enormous, and when we add to this the quantity of hydrangeas, genistas and azaleas grown within a hundred miles of New York the marvel is where they all go to.

President Jas. Dean is well known as a successful grower of Easter stuff, making it his specialty, and his large place at Bay Ridge is especially interesting at this season.

Naturally he has lilies galore; he averages five thousand plants a season. They are all grown in pots, both Harrisii and longiflorum. Mr. Dean commented on the fact that these lilies now seem extremely mixed, many of the longiflorums especially showing a marked deviation from their original type. This might very readily occur on the Bermuda bulb farms, in the case of bulbs bought in widely different localities, while the variations are likely to be still greater in the case of seedlings.

Like many others, the writer always considered Harrisii far less substantial than longiflorum. Mr. Dean, however, does not hold this opinion, and there is no doubt he has the best grounds for his point of view. At Mr. Dean's request the writer handled flowers of the two varieties blindfold, to discover that the bloom confidently declared the hardest and firmest in texture was Harrisii! Another illusion gone. Mr. Dean keeps lilies, like all his stuff, as cool as possible; towards the last the houses are kept so open that the plants are practically out of doors. This hardening process adds very materially to their value, as it enables them to bear changes in temperature and position without injury.

Azaleas seem to keep their popularity year after year, nor do the varieties appear to change. A new one noted was Vervæneana; the flowers are extremely double and very large; color, a clear light pink bordered with white.

The hydrangeas noted were all Otaksa, which continues to be the favorite sort for forcing. The plants were all of medium size; experience proves that the exceptionally large plants are not needed in quantity, since they are only available for very large decorations.

Genistas were to be seen in all sizes, some veritable trees, which make their appearance year after year in big church decorations. They look rather formidable to handle, when covered with bloom, but no packing is required, as they are transported in big vans. The small genistas, in six-inch pots, make a mass of golden bloom; a very attractive size.

Like most plant fanciers, Mr. Dean has some of the fine French cannas, which have been blooming all winter. He has been raising some seedlings; among them is one in particular for which we may confidently predict a big future. It has foliage of remarkable beauty, a rich red bronze, without any green tint; the flower is orange. Growth, similar to Crozy; the richly colored foliage makes a fine contrast with the green-leaved varieties.

There is no material for cut flowers on this place; excepting some houses of fine palms the place is practically filled with Easter stuff.

In flowering such plants as azaleas the grower has to do some very close figuring, so as to have them in good condition at the right date. White azaleas need especial care, as the flowers become discolored when exposed to a cold, damp atmosphere.

Another famous place at Bay Ridge is the Keller establishment. Mr. Keller grows palms and other decorative plants, displaying a lot of fine kentias, but the Easter stuff is his specialty. One large house filled with hydrangeas made a grand show, the plants being so uniformly fine. Otaksa was the prevailing sort, but there were some hortensis among them; this variety, however, does not force so strongly as the former. One was almost tempted to call the mass of hydrangeas the finest thing to be seen, until attention was directed to the specimen azaleas. Flag of Truce made an especially fine specimen, well flowered, while Vervæneana was again admired. While a majority of the azaleas were imported, a few home grown plants were seen, but the comparison was overwhelmingly in favor of the foreigners. The advantage abroad may be as much in the soil as the culture, but there is no doubt the Dutch and Belgian growers produce a rich and luxuriant foliage apparently not to be obtained here. This difference in the foliage is fully as marked as the difference in habit of growth. Astilbe is to be seen in pots, but we are told it has seen its best days, and is now gradually going out of favor.

A decided novelty noted at Mr. Keller's was Kalmia latifolia forced in pots. This plant, Mountain Laurel or Calico Bush, as some unromantic souls call it, is one of our handsomest native shrubs, and its clusters of waxen white or faint pink flowers should make it highly desirable, if it takes kindly to forcing. The plants seen at Mr. Keller's were pot-grown specimens from Holland, and though the leaves were paler than when grown outside, the flowers gave promise of full luxuriance.

Genista was plentiful and well-grown, the plants all being raised on the place, instead of imported. Two varieties were grown, G. racemosa, and G. canariensis. The first named is the handsomer of the two, flowering more abundantly than canariensis, and the longer racemes give it an appearance of still greater luxuriance. Otherwise the difference between the two plants is but slight, and they are sold without distinction, other than size.

Mr. Keller has a fine lot of marguerites, which are always popular as a spring plant. There is comparatively little complaint this season of the vexatious disease (or insect?) which has done so much injury to the foliage of this plant.

Pæonies were among miscellaneous plants forced by Mr. Keller; some of the showy herbaceous varieties are much admired around Easter. In fact, any flower

suggestive of spring is sure to take; for this reason we find cinerarias very popular, for in spite of their stiff habit and aggressive colors people always like their spring-like freshness. Cinerarias are usually plentiful in the hands of the peddlers, a good many being grown at little places which do not deal with the wholesale trade. EMILY LOUISE TAPLIN.

Easter Jottings.

If the American florist could see the fields of Lilium Harrisii as they are now beginning to bloom in Bermuda, it would make his eyes grow green with envy. The fields are now beginning to bloom, and are so white as to look as if almost covered with snow. If these flowers could have been shipped from Bermuda with anything like satisfaction, they would have destroyed the value of the lily as an Easter flower. From the fact that lilies grown under glass here can be shipped to long distances, many thought there was no reason why the flowers could not be shipped from Bermuda, as the voyage was but three days, and as the probabilities seemed in favor of it, many would never be convinced until they had tried it. We tried shipping these when we first went into growing Lilium Harrisii in Bermuda some ten or twelve years ago, and after two or three seasons' trial found it an impossibility to bring them into New York in good shape, and this was in the days when fancy prices were realized, and Easter lilies used to touch $35 per 100, and almost anything in the shape of a lily was salable. Two or three years convinced us however it was an impossibility to do it. One of the reasons for this is the time of the arrival of the steamer. The steamer arrives in New York on Sunday, and necessitates the shipment of flowers some ten days previous to the time they would have to be used. This has no doubt been the greatest disadvantage, but another thing is the fact that out of door flowers, do not possess the substance that flowers do that are grown under glass; this is true not only of lilies but of all other flowers, a notable instance of which is the rose. There is as much importance to our mind in the proper cutting and handling of a crop for market as there is in growing it. We have found in many cases men who would grow lilies splendidly, that at the time of marketing, would ruin them by improper methods of handling. Years ago it was claimed that the Harrisii was nothing like as good as longiflorum, and that the latter would drive Harrisii out of the market for an Easter flower, but time has proved this assertion was not well founded. It is true Harrisii does not possess the substance that longiflorum does, but that it has all the necessary qualities for a good flower is beyond question, when the flowers are properly cut and handled.

Nine florists out of ten leave their Harrisii in the sun altogether too long after being ready to cut. Our experience has shown that as soon as the flowers are open enough to remove the pollen, the flowers should be cut and put in water in a dark cellar, and when cut in this condition the flowers never assume a transparent and papery form, but have a waxey appearance, which is most desirable. This of course refers more particularly to the smaller sized lilies grown for cutting, on which there is but two, three or four flowers to a stem. If lilies are grown cool and advance slowly, it will be found that when the first lilies begin to open, if cut in the manner described, the remaining buds will open as well or better in water, as in the house, and it keeps the first flowers in the best condition, much better than if allowed to stand in the heat and sunshine in a greenhouse, to open the second flower. Substantially the same treatment is used for pot plants, if the waxiness of the flower is to be kept. Where florists have facilities for doing it, a greenhouse darkened artificially, where a low temperature can be maintained, and where there is no draft, or a cool shed or cellar, is very much preferable for holding the flowers and prevents their being damaged, and allows many more flowers to open on the plants, without spoiling the first flowers that have opened. Lilies when they begin to flower should never suffer for water as it injures the quality of the flowers.

Notwithstanding the fact that Easter Lilies cannot be shipped from the open ground in Bermuda on short trips to New York successfully, it is a fact that greenhouse flowers, properly cut, as just indicated, can be shipped almost across the entire United States with perfect safety. We have repeatedly made shipments as far as Texas, and as far west as Colorado, and the parties there assured us the flowers on arrival were quite as fresh as if just cut and packed. We have found the best results in shipping long distances were obtained from lilies that were cut as soon as they were open enough to remove the pollen from the flowers and put in cool cellars for a day, and allowed to harden and cool off, then packed in the early morning with a little cotton between the flowers to keep them from bruising, and the box packed as tightly as it is possible to pack them. More flowers are injured by *loose* packing than almost any other one cause.

Care should always be exercised when packing flowers away in a cellar, that they be *absolutely dry*, as the least bit of moisture on the flowers will discolor and ruin them. Any cellar where the least condensation occurs is always ruinous, and the flowers that have been put away for a week should be examined to see there is no condensation, as we find it will sometimes occur on lily flowers when roses and other flowers would never show it. A lily properly cut can be kept two weeks without being hurt in the least, or impairing their waxiness and durability. Occasionally they will show signs of flabbing; when this occurs they should be removed from the jars, the stems freshly cut, and they will shortly be as good as ever. Lilies shipped long distances should always have their stems freshly cut, and then placed in a cool dark cellar for half a day before using; this will be found to improve them very much.

Harrisii lilies have been very plentiful during Lent, in fact have been a drug on the market, but we believe this to be from the fact that Easter is so late, and that the warm weather has brought many crops in ahead of time. But from the present indications I think Harrisii will be rather scarcer than otherwise at Easter, and that the demand will exceed the supply, and that prices will take a sharp turn upwards at that time in consequence. Warm weather and a late Easter has no doubt thrown many crops into bloom earlier than the growers would have desired could they have deferred their season of bloom and controlled them, as they would have wished.

F. R. PIERSON,

Tarrytown, N. Y., March 31st, 1892.

Spring Exhibition Pennsylvania Horticultural Society, Philadelphia.

The spring show of the Pennsylvania Horticultural Society for 1892 has come and gone and all those who have been identified with its success have cause for congratulation.

Many florists and others outside of Philadelphia do not know that there are two distinct horticultural organizations in this city—the old time-honored Pennsylvania Horticultural Society and the Florists' Club of Philadelphia. The former has been in existence 60 odd years, while the latter was called forth for the purpose of aiding the S. A. F. at its second convention which was held here in the summer of 1886. The club has ever since that time cherished a sincere affection for the older society on account of courtesies extended on that occasion and since.

For two or three years past the club has taken charge of the decorations at the spring and chrysanthemum shows, but on this occasion it was much more elaborate and complete than has ever before been attempted. Headed by John Westcott most of the members of the club turned out and worked with a will until Horticultural Hall was transformed into what has been aptly termed a veritable bower of grace and beauty. Much of the material used in the decorations came from Caldwell, the Woodsman, (*On Dit*, George is about to become a Benedict in leading a rich widow to the altar. We wish him all the joy and good fortune this life affords). The southern smilax, palm leaves, etc. were very effectively draped in front of the balcony. Evergreens were used as a screen from the promenade beneath and as a background for the exhibits. In each corner was an alcove with rustic seats invitingly arranged, which were never vacant. The enchanting music furnished by Hassler's orchestra added much to the enjoyment of all visitors.

Mr. George Huster, superintendent of the horticultural department at Girard College, came out nobly with exhibits of choice flowering and other decorative plants. His group in the center of the hall was an attractive feature. The judges awarded a silver medal for taste displayed in this arrangement. It consisted of graceful palms, highly colored crotons and well flowered azaleas. His groups which flanked the stage were also much admired, and proved an almost universally accepted invitation to ascend the rostrum and admire the specimen latanias and thrinax palms of Wm. Joyce, gardener to Miss Baldwin, and the unique collection of cactuses of A. Blanc & Co., which were very effectively arranged on this elevation. Though not so large and complete as that made at the shows last year it proved to be a drawing card.

Two large specimen plants, mounted on pedestals and occupying positions in the main, hall, were brought from the conservatories of Mr. Geo. W. Childs by Mr. J. M. Hughes, the superintendent. This is the last time they will appear here as Mr. Childs has generously donated them to Mr. John Thorpe, of the World's Fair. One is the Cibotium regale (Dicksonia regalis), the royal palm from Mexico, and the popular Latania borbonica (Livistona chinensis). Mr. Hughes had also a large group of palms in variety, pandanus, aralias, etc., among which were some well grown specimens. These were not brought for competition, but a special premium was deservedly awarded for general effect.

Mr. Joyce was awarded first premium

for a display of plants occupying not less than 100 square feet.

Mr. Thomas Long, gardener for A. J. Drexel, Esq., received first premium for ferns, and they certainly were a fine lot, every plant a specimen, clean and healthy and of large proportions. One worthy of notice, though perhaps the smallest plant in the group, was Adiantum Williamsii. This is sometimes called the "Golden Maiden Hair" on account of the young fronds being dusted with a fine yellow powder. Two Davallias—affinis and Fijiensis (species of the hare's foot fern)—were prominent, so also were the crested forms of Microlepia hirta and Pteris crenulata and the Gleichenia circinata. The premium for new or rare plant was awarded to the same exhibitor for Araucaria excelsa glauca, Napoleon Joseph Baumann. It is larger than the type, as the name no doubt suggests. First premium for collection of palms also.

Mrs. Harry Ingersoll's gardener, Fred R. Sykes, made an interesting display of flowering plants, some of which are seldom seen in collections nowadays. The Inga pulcherrima was hardly known to anybody, with its crimson flowers. And the Francisca latifolia, brush like, sweetly scented and of a lavender color, varying according to the length of time the flower had been expanded, those having been open longest being almost pure white. An Ixora was in bloom in this lot, which was noticed by the old timers; it is so long since a plant of the species had been seen here.

Another attractive feature was a group of azaleas, which came from President Dean (S. A. F.), for which he was awarded a silver medal. The parti-colored and large flowered Vervæneana, the bright red Eugene Mazel, a few good plants of the popular rose pink Van der Cruysen, Ma Camille Van Langenhoe, Ceres, and the beautiful double white Deutsche Perle.

Mr. W. K. Harris had some nice well grown plants of azaleas also. A delicate blush pink, double flower named Princess Victoria struck me as being the most beautiful variety I had ever seen. Azalea men will do well to remember the name and secure a stock as early as possible, for it certainly will *take* with those who discriminate when buying this class of plants. "In memory of Louis Van Houtte" (too long a name), an extra fine variety, being similar in color to Van der Cruysen, but the flowers are larger. Emperor of Brazil is an attractive variety, so also is Niobe, a greenish white, very pretty.

J. W. Colflesh exhibited azaleas also, and Marguerites, Zonal pelargoniums and the best carnation plants in bloom in the exhibition. He also exhibited cut flowers of his new variety, Mrs. Colflesh. It is bright pink in color and has very long stems.

Cinerarias were out in good force, those from Albert Woltemate being exceedingly well grown. They were dwarf, had good foliage and the strain was extra good.

Robert Craig made an excellent display of Araucaria excelsa and A. excelsa glauca, besides other foliage plants, and double daffodils in boxes.

William Berger, of Germantown, had by far the largest display of spring bulbs. For some reason not easily explained this part of the show was behind that of former years in point of number. The hyacinths that were here were as good as could be wished. The trumpet narcissus were also good. Maybe the small amounts in premiums offered had something to do with the meagre display. The better varieties of "Trumpets" are rather high in price, and perhaps this may have had an influence on the entries in this class.

In the class for best new carnation not yet in commerce there were four competitors. Edna Craig, the winner, is a delicate pink on stout erect stems. It is one of Mr. Fred Dorner's seedlings. The prize is a silver cup, offered by Mr. Craig. The other competitors were "Grace Battles," also a delicate pink on stout and very long stems. One thousand dollars has been offered for half the stock of this variety. The Mrs. Colflesh was also a competitor. Sentinel, a scarlet, was exhibited in the same class by E. G. Hill & Co. This is one of Mr. Dorner's seedlings also.

There was no competition for the Wentworth prize (offered by Dr. Williams) for carnation plants in pots, but in the class for the best collection of cut flowers, offered by the same gentleman, there were two entries, C. J. Pennock, Kennett Square, Pa., and H. E. Chitty, Paterson, N. J. The former was awarded the first premium, list of varieties follows: Whites—Pearl, McGowan, Lamborn, Mrs. Fisher, Mlle. Carle, Hinze's White, Snowden; Reds—Portia, Century, Constancy, E. G. Hill, Pride of Kennett, Anna Webb; Pinks—Grace Wilder, Fred Creighton, Dawn, Grace Fardon, Mrs. F. Mangold, Daybreak, Angelus.

Mr. Chitty's collection contained the following: Grace Wilder, Robert Craig, Nellie Lewis, McGowan, Lamborn, Hector, Dawn, Portia, Tidal Wave, J. R. Freeman, Am. Flag, Creighton, Mrs. L. Fawcett, Buttercup, W. F. Dreer, Pride of Kennett, Silver Spray and Anna Webb.

A seedling which attracted much attention was, unfortunately for the exhibitor, without his name attached. The name of the variety is "Myrtle," and it is similar in color and markings to the old Duke of Orange. It is a much better flower than the "Duke." Edward Swayne had a fine flower here, a creamy white, good in form, an unbursted calyx, a circular fringed flower and with stout, erect stem. A new name as an exhibitor of seedling carnations is F. L. Kohr, of Lancaster. His No. 53 is a delicate pink, the outer petals standing straight out, is good in form; No. 23 is yellow and red, after the style of Sunrise, but the color is more decided and the flower is much larger.

W. R. Shelmire, Avondale, had at the show his sport from Buttercup named Mrs. Stanley. This is orange in color, with red marking, very showy, and it is sweet-scented, something unusual so far as I know for a sport to take on the quality of fragrance, when its parent is entirely devoid of odor. His Cæsar, salmon striped red, attracted a good deal of attention on account of its fine form, complete calyx and strong stems. The self colored sport from the last named is identical with its parent excepting in color, which is red.

A. M. Herr of Lancaster, had some fine examples of last year's novelties, namely: Daybreak, Hector and Lizzie McGowan. The same may be said for Chamblers Bros., who had extra fine flowers of their new Grace Darling and the old Portia and older Buttercup.

J. J. Styer, Concordville, had a fine vase of the much abused and much praised Lamborn. The flowers here shown certainly deserve all that has been said in this novelty's favor. Robert Craig, in addition to his Edna Craig, exhibited some fine flowers of Lizzie McGowan, which he declares has paid him better than any variety he has grown this year. He is so well pleased with it that he is about to have the house in which it is growing photographed.

For collection of orchids in bloom first went to Edwin Lonsdale; second, to Siebrecht & Wadley; third, to David Emery, gardener to Chas. Dissel.

In plants in pots, open to growers only, first premiums were awarded to Thomas Long, gardener to A. J. Drexel, for 25 varieties palms, 12 varieties ferns and new or rare plant; to W. K. Harris for 6 varieties azaleas, 6 hydrangeas, specimen hydrangea, 6 Marguerites, 50 tulips and 6 pots lily of the valley; to David Emery for 2 varieties azaleas, specimen azalea, specimen fern, 12 English primroses, Primula obconica, 6 callas and cyclamens; to J. W. Colflesh for 12 carnations; to Woltemate Bros. for 12 cinerarias; to Wm. Berger for 25 pansies, 12 anemones, 25 hyacinths, 12 ditto, 6 tulips, 12 ditto, 24 trumpet narcissus, 24 poeticus ditto, 24 double ditto, specimen lily and general display of spring bulbs; to F. R. Sykes for 6 English daisies; to John Curwen, Jr., for 6 begonias; to James Dean for collection of azaleas, a silver cup.

Special premiums in the same division were awarded to Rob't Craig for general collection of plants; to Henry A. Dreer for same; to Jno. M. Hughes for decorative plants; to Chester Davis for orchids and blooming plants; to Geo. Huster for decorative plants, and silver medal for taste displayed in arrangement of same; to A. Blanc & Co. for cacti; to W. K. Harris for palms and ficus; to Wm. Joyce for 6 specimen palms.

In cut flowers, open to growers only, Pitcher & Manda were first for collection of orchid blooms; H. E. Chitty for 25 scarlet carnations and 25 dark pink ditto; Wm. Swayne for 25 light pink carnations and 25 striped white ground ditto; J. J. Styer for 25 white carnations. In the rose classes Joseph Heacock was first for Perle, Niphetos, Bennett, Gontier, Sunset, Mermet, La France, Laing, Brunner, Magna, Wootton and Waban; M. C. Cheyney & Bro. for Bride; Heron & Nisbet for Cusin; J. W. Colflesh for Jacq; Thos. Monahan for Albany and Hoste.

The rose Bridesmaid (nee The Hugh) from F. L. Moore, Chatham, N. J., and J. N. May, Summit, N. J., were awarded first premium for new rose and a certificate of merit. It is lighter in color than Waban and of better form as seen generally, yet it is darker than Mermet.

J. F. Harris was first for collection of cut blooms of pansies.

In the cut flower classes, open to dealers only, Pennock Bros. took all the firsts in the carnation classes—taking that for 25 white with McGowan. In the rose classes firsts went to Pennock Bros. for Perle, Bride, Gontier, Am. Beauty, Cusin, Rothschild, Brunner, Magna and any other variety (Pierre Guillot); to Kift & Son for Niphetos, Bennett, Sunset and Laing; to Heron & Nisbet for La France.

In the carnation classes, for growers, first prizes were also awarded to Jos. Heacock for 25 crimson and to Wm. Swayne for 25 any color other than noted, taking the prize with the variety Dawn.

In floral arrangements Hugh Graham was first for basket and Bride's bouquet; Pennock Bros. for plateau and dinner table decoration; Heron & Nisbet for 6 corsage bouquets; Wm. Wunder for vase of roses; and Jos. Kift & Son received a special for decorative easel.

On Thursday the competition in cut flowers was repeated. In the rose classes for growers Jos. Heacock took first for

Perle, Niphetos, Bride, Gontier, Sunset, Mermet, La France, Laing, Brunner, Magna, Wootton, any other variety (with Pierre Guillot) and Watteville; Wiegand Bros., W. Hoboken, N. J., for Jacq, Capt. Christy and Neyron; Wm. Wunder for Waban.

In the rose classes for florist dealers Kift & Son were first for Perle, Gontier, Sunset and special for Albany; Heron & Nisbet for Niphetos, Bride, Mermet, La France, Hoste and Brunner; Pennock Bros. for Bennett, Beauty, Cusin, Jacq, Luizet, Laing, Capt. Christy. Neyron, Magna and any other variety.

Special mention to D. Zirngiebel, Needham, Mass., for display of pansies; to Wiegand Bros. for "Wiegand's Giant" mignonette; to W. K. Harris for lily of the valley.

Certificates of merit were awarded to H. A. Dreer for Daisy Snow Crest and display of cannas in bloom; to Chambers Bros. for carnation Grace Darling. Special mention to C. A. Knapp for display of bouvardia and to E. J. Canning for Primula obconica.

The special prizes offered by John Gardiner & Co. for mushrooms were awarded as follows: 24 specimens—First to David Allan, Boston, Mass.; second to N. P. McCaffrey, Moorestown, N. J.; third to Allen H. Heist, Doylestown, Pa.; fourth to Paul Reinhart, Germantown; fifth to Edward H. Harris, Moorestown, N. J.

A. Blanc & Co. presented visitors with a plant each of cactus on the last day of the show.

Notes about the orchids must be deferred until next issue. L.

Philadelphia.

Governor Pattison has proclaimed Thursday, April 14, and Friday, May 6, to be observed as Arbor Days in Pennsylvania, and upon one or the other of these days throughout the state will be celebrated the beautiful and beneficient custom of planting trees and flowers.

"I call upon the people," states the governor, "to lay aside for a season the habitual activities of a day and devote sufficient time thereof to plant a forest, fruit or ornamental tree along the public highways and streams, in private and public parks, about the public school house and on the college grounds, in gardens and on the farms, thus promoting the pleasure, profit and prosperity of the people of the state, providing protection against floods and storms, securing health and comfort, increasing that which is beautiful and pleasing to the eye, comforting to physical life and elevating to the mind and heart."

"Gifts that grow are best,
Hands that bless are blest,
Plant:—Life does the rest:
Heaven and earth helps him who plants a tree,
And his work its own reward shall be."

"Gifts that grow are best" is a good motto for the Easter trade and for the balance of the year, for that matter, as gifts that grow and that have been grown, are *the* gifts for the people.

Business has been only moderately active the past week and for almost the first time this season there has been too many carnations. They soon begin to nod these days and the florists don't care to carry a very large stock when they find they can't get them to wake up in the mornings.

Prices hold up well. Roses, small teas, 4 to 6; Mermets, Brides, etc., 6 to 8; hybrids, 25 to 50; smilax, very scarce, 25 cents for a very small string.

There were a number of store openings the past week, more or less elaborate; some of the florists make a specialty of this line and do quite a lot of it. They help to use up the flowers during Lent and prevent a glut.

Nearly 100 people sat down to the dinner given by the Florist Club in Horticultural Hall on Wednesday evening last. It was a very enjoyable occasion and will no doubt be held every season hereafter in connection with the annual spring exhibition of the Horticultural Society. There was no effort made to work up the attendance, still nearly 100 persons gathered about the board, lingering until the wee small hours and seemed loath to part even then.

Robert Craig sat at the head of the cross table. He looked a trifle pale and thin on account of his recent severe illness, but his manner and address were as bright as of yore. He seemed very glad to be with the boys again, but not more so than they, for he is the life of their social gatherings.

The boys were out for a good time and they had it. There was plenty to eat and quite sufficient to drink. John Westcott, as chairman of the committee, was very attentive to the wants of the members and invited guests, of which there were quite a number, though not as many as the club would have liked to have seen.

On Mr. Craig's right sat James Dean, Chas. Weathered, T. H. Flynn of Boston, John Hughes, gardener to G. W. Childs, Esq.; A. Dimmock of England. On his left were W. J. Stewart, W. A. Manda, David Allan, Boston; Edwin Lonsdale and John N. May.

There were many animated scenes as the different courses were served in quick succession and it was the best dinner the club has ever had in tnis respect.

With the advent of the cigars Mr. Craig rapped for order and made an address expressing his personal gratification at being able to be again present and see so many familiar faces, members of the club and also friends from other cities. He thought it a good time while the show was on, although it was the best spring show the society had ever had, to look forward to the one to be held next year and see how it could be improved; if there were not some plants not now shown which could be brought on next season to make the exhibition more attractive. He suggested varieties of narcissus and also cyclamen, which could be grown in a cool house and make fine show plants at this season.

"Our Friends from Boston" was the first toast and was responded to by W. J. Stewart, who said there were no boys like the Philadelphia boys and he was only sorry that they in Boston could not get them there oftener. They could not refuse their invitations to come to Philadelphia, but could not get the Philadelphia boys to come to Boston, and urged upon them to come at the first opportunity and they would not regret it.

"Our New York Friends" was responded to by Mr. Chas. Weathered, whom Mr. Craig said was the greatest florist over there. Mr. Weathered said that although he put up a great many greenhouses, he was not as yet a florist, but if ever he became one he was always going to come out ahead. He would like to see the florists of Philadelphia in New York on their next social occasion, not singly, but in a body, and he could assure them that they should have the best the country afforded.

Mr. Dimmock was now called on for a song, and sang "The Midshipmite," which was well received.

The Society of American Florists was now toasted and the sentiment was responded to by Mr. Dean, who said that a father was always satisfied when he saw his children happy and if there were any there who were not his children, they should get under his wing at once and become members of the society. He hoped to see a very large delegation from Philadelphia at Washington and predicted that it would take one of the largest engines to pull the train. He hoped that before long the Florists' Club of New York would have a building of its own, where it could invite its friends and show them the courtesies it would like. He had heard that there was a conspiracy among the Philadelphia chrysanthemum growers to capture all the first prizes at the show in New York next fall, but they would have a hard job on hand and he doubted if they could do it. Mr. Westcott said "they'll do it," and Mr. Dean said he would give $50 to see it done.

"Our Friends from Lancaster" were next toasted. Hr. Herr was called on, but declined in favor of Mr. Shroyer, who thought he could detect a good deal of Irish blood in the membership, from the quality of the stuff provided, which was of the first water, although there was not much water in it.

At this point some of the visitors had to leave to take the train for New York.

Horace Haines, who has a fine tenor voice, was now called for and sang "The Song that Reached my Heart." This was enthusiastically received and Mr. Haines for an encore gave "On the Bridge at Midnight."

"The Seedsmen" was the next toast and Z. De Forest Ely replied. He hoped for even greater unity between the florists and seedsmen and saw a great future ahead for both. As he did not believe that anybody present was of a very serious turn of mind, he would tell them a story, which he did in his best vein.

Archie Ferguson now sang "The Star Spangled Banner," and all present joined heartily in the chorus.

Brother Farson was now called on, and made one of his characteristic speeches. He first pleaded extreme modesty and then that he had been overworked, but he soon seemed to forget all about these small defects and made a speech that caught the boys, particularly the anecdote which was given as the wind up.

The American Carnation Society was now toasted and its president, Edwin Lonsdale, responded to the toast. He said it was very gratifying to him to see so many beautiful varieties of carnations on exhibition, but that the display was not to be compared to the exhibit at Buffalo. He was disappointed in not seeing the west represented. He was sure Mr. Dorner would have sent a collection if he had known of the cup offered for best variety not in commerce. Still he was glad to see the new varieties and note the wonderful improvement made in the past five years. He liked to look forward into the future and thought it would not be long before the ideal carnation would make its appearance.

At the close of his address the Grand Old Duke was called for and Mr. Lonsdale sang the famous song as only he can do it, being liberally supported in the chorus by all present.

Mr. Harris was asked to respond to the chrysanthemum, but said it was out of place now and he was not prepared to do it justice.

Horticulture at the World's Fair was a subject upon which Mr. Craig grew quite eloquent. He said it was of the utmost

importance that this department should be magnificently filled; that it would give a wonderful impetus to our business. In fact Mr. Craig, by his manner and enthusiasm, showed that he took great interest in this matter, and said it was to the interest of everyone in the trade to do what he could to make the horticultural department a success.

Mr. May was called on to respond. He said that floriculture should be represented as well as any other department at the World's Fair and that if all put their shoulders to the wheel and pushed as one man it will be sure to be a grand success. Every man can do something, and in the aggregate that means a great deal and is sure to produce good results.

Mr. Craig was now called on by Mr. Farson and sang a song entitled "Father O'Grynn."

Mr. Charles Fox was now called on to respond to the toast "Artistic Decorations." He said that he thought the society had taken on new life, that it was the best show he had seen for a long time. That such exhibitions would be sure to draw the people and would soon become the fashionable event of the season.

The trade press was now toasted and response was made by a representative of the Florists' Exchange in a few well chosen words.

John Walker was now called on and sprung a surprise on the boys in the shape of an original song written by himself, in which he had the names of members of the club arranged to rhyme, the chorus being the popular "Tar-ra-ra-Boom," etc., which was joined in generally.

Mr. Westcott's health was now drunk and Mr. Craig proposed three cheers for the hard working superintendent, which, with a tiger, were given with a will. Mr. Westcott thanked the boys for their good will, but said in his modest way that there were others who should be honored. The members of the Florists' Club were under obligations to the Horticultural Society and it was only right that they should do all they could at the time of the exhibitions to make them a success. When the society got some money in its treasury and could afford it there would then be decorations that would far exceed anything yet attempted.

There were other songs, by Messrs. Haines and Dimmock and the party broke up at a late hour with the singing of "Auld Lang Syne." The occasion is one that will long be remembered by those present.

Boston.

There is no special change in the situation as regards general cut flower trade from that outlined in last week's report. The weather being much warmer there is an increased supply of roses coming in and prices are somewhat lower. Carnations do not weaken any, however, and there is a quick sale for every good one that is obtainable. This is the case with white carnations especially, which have been eagerly called for all through the week and it has been impossible to meet the demand fully.

Funeral work seems to have been abundant enough to have made a good steady run on white flowers of all kinds. This, together with an unusually brisk transient trade for small amounts, seems to have kept the florists so busy that they have scarcely noticed the fact that it was the Lenten season. Parties of all kinds have been conspicuous by their absence of course, but taken altogether the dullness has not been as pronounced as was expected.

The banquet of the Gardeners' and Florists' Club on the evening of March 31st, was a very successful affair. It was held at the United States Hotel. There were about 100 present, a noticeable feature being the large proportion of the younger element attending. And a merry time they had. Not as hilarious as some such occasions are, but thoroughly enjoyable from a Boston point of view, where as is generally known, it is not fashionable to be over-demonstrative. And the Boston idea was further illustrated by the fact that when the hands of the clock pointed to 11 p.m., the banquet hall was deserted and the participants had all departed for their homes.

The position of master of ceremonies was gracefully filled by President Morton, and at his side sat the two invited guests of the evening, Mr. Alfred Outram, of London, and City Clerk J. M. Galvin, of Boston. Both of these gentlemen made entertaining addresses, Mr. Outram paying a hearty compliment to Boston's standing in horticulture, and referring particularly to a visit which he had just made to the conservatories of Mr. F. L. Ames, where he asserted he had witnessed a display of orchids in bloom such as he had never seen equalled at this season of the year in Europe.

Mr. Galvin's address was patriotic and assured his hearers that although holding now a position not identified with the florist trade, yet he still holds in highest esteem his old associates, and especially the Gardeners' and Florists' Club. Mr. P. Welch made a short and humorous address in response to the toast "The Society of American Florists," claiming, however, that the chairman had caught him unawares, as he had become so well accustomed to being called on to speak for the "Commission Man," that he was unprepared for anything else. Messrs. Dawson, Carroll, Ward, Stewart and others entertained the company with songs; sweet music was also furnished by the orchestra, and Mr. M. Curley, of Hyde Park, added to the entertainment by a series of impromptu but well executed pigeon wings whenever the nature of the music furnished the necessary incentive. All the departments of the business were well represented, including wholesalers, retailers, rose growers, carnation growers, private gardeners, seedsmen, boiler men and clerks. The one important toast which was unintentionally forgotten, one which is always eloquently responded to at a Florist Club banquet, was "The Ladies." Judge Hoitt and Secretary Elijah Wood were both unavoidably absent, a fact which probably was the cause of the oversight.

The meeting of the Bowling Club was well attended on Wednesday night. The scores are beginning to look up, several on this occasion running into the two hundreds. Lawrence Cotter made the best average, 165¼ in four games.

Mr. David Allan wears an expression of broad good humor, and a number of his associates hold their heads an inch or two higher since he came home with the big mushroom prize from Philadelphia in his pocket.

At Horticultural Hall on April 2 David Allan exhibited a number of rare varieties of Dendrobium nobile. Jas. Comley had a good stand of hybrid roses and Rhododendron Veitchianum.

Mr. P. Norton, who has been confined to his home by a painful carbuncle on his neck, is out again, although obliged to carry his head very high and unable as yet to make a bow or look up at the moon.

There are some very fine stocks of lilies for Easter in this section, among which those at J. M. Galvin's and Wm. Edgar's are particularly good.

New York.

Just now, in the dull time following mid-Lent, the trade is rather quieter than usual and the quantity of flowers gives the market a downward tendency. The past season has never seen an actual glut of flowers, and bulbs have been less plentiful than for several years. Even tulips remain at a fair price for the season, preference being shown for the pink and yellow varieties, which bring the highest price at present. Good pink tulips are scarce and will bring $5 a 100, which is a remarkably good price for the season. Violets are extremely plentiful. Single violets from North Carolina were seen at Young Bros.; they were large, deep purple and very lasting, but entirely odorless. They are quite unsalable, however, for buyers do not care for a violet without scent, and the single flowers are neglected when double ones are plentiful. White violets are in little demand, though occasionally required for wedding bouquets; though Swanley White is usually in the market the purple remains the popular flower.

Luizet heads the list in roses at present, its color always makes it a fashionable flower and fine blooms are coming in from New Jersey growers.

A good many poor Jacqs are in, but some unusually fine specimens of this rose were seen at Jas. A. Hammond's, they were grown by Dietz of Union Hill. That little corner in Jersey usually heads the procession in Jacqueminots. Mr. Hammond also displayed some blooms of Hoste fine enough for exhibition flowers, they were grown by Noe of Madison. This rose appears to have obtained a firm hold on the trade now; at first some doubts were expressed on account of its color being neither white nor yellow, but we find that in many cases the creamy tinge of Hoste is preferred to a dead white.

Among carnations Wilder is always in demand, and would always bring a higher price (if good) than any other, simply because it is a favorite color. Buttercup is another of which one may say almost the same thing, but it is extremely scarce and has been all winter. Seems as if very few growers could succeed with it; we want a new yellow trade carnation.

Some fine blooms of Her Majesty held a prominent place in Brower's window this week; it is a long time since this rose has been on view in New York.

Cleverly forced wistaria decorated Thorley's window April 1st, rather a novelty, and a very graceful one. The flower racemes were large, but pure white instead of lilac in color.

President Jas. Dean was at the Philadelphia show, accompanied by some of his fine azaleas. A goodly number of New Yorkers attended the show; Siebrecht & Wadley exhibited orchids.

Augustus Bennett, late with Mr. Brown at Flatbush, will go to Milwaukee to take a position with Currie Bros.

Mr. Alfred Outram, representing B. S. Williams, of London, arrived in New York March 27, going from this city to Boston.

Seed trade is reported as extremely brisk, and the plant trade is opening well. There is always some delay when Easter is so late; it keeps Easter stuff about when the growers want to make room for other spring plants. As soon as Easter is over the plant auctions will begin. The hardy stuff sold at auction this spring has been, for the most part, extremely

good. A lot of good roses were sold at Elliott's April 1st.

Samuel Henshaw, who was among the buyers, is now engaged in landscape work. Speaking of aquatic plants, which Mr. Henshaw considers one of the coming features in landscape gardening, he alluded to the rampant growth of the Egyptian lotus. In arranging a lily pond he builds an impervious tank in the center for the lotus, so as to keep it within bounds, otherwise it would crowd everything else out of the water. In arranging a lotus tank no arrangement is made for an overflow, as the plants absorb the water too rapidly for it ever to become stagnant.

Siebrecht & Wadley have added to their city department a very large and handsome van for the transportation of plants. The arrangements for heating and ventilating are perfect and in it large decorative plants can be safely carried in the severest weather.

Baltimore.

For a wonder there was no ball or concert overhead at the last meeting of the club, but a band at a dime museum across the way was ably seconded by the peripatetic organ and piano from the street in supplying the customary amount of noise. Imagine the relief that was afforded by the announcement of the committee in charge of the subject that our next meeting would be held in quieter quarters. To be sure Baltimore Horticultural Hall has not been built yet, but these frequent movings will have the effect of making a permanent and satisfactory location seem the most desirable thing in the world to the members of the club, and when that point is reached the hall will not be far away.

The beautiful silver cup given as a special premium by Mrs. M. J. Thomas was on exhibition, and on motion was offered for the best 12 cut blooms of Chrysanthemum M. J. Thomas.

Two gold medals were on exhibition too, offered by Halliday Bros.; one for best 12 blooms any kind shown by professional florist, the other for best specimen plant, Japanese or Chinese, shown by amateurs.

The postponed election for secretary resulted in giving us Mr. J. J. Perry, the gentlemanly manager of the Florists' Exchange, as a recorder for a year.

Then the event of the evening took place, an event that, to judge from appearances, is not to stand alone, but be followed by others of the same kind, the election of eleven passive or associate members from the ranks of our most aristocratic citizens. Really when the scribe heard the list of names the vision of a stately horticultural hall did not seem one half so much of a dream as before, but drew so near that he could almost give a description of its exterior.

A committee was nominated by the chair to have entire charge of the chrysanthemum show, consisting of Messrs. I. H. Moss, Robt. Halliday, Jr., and F. G. Burger.

Quite a discussion followed the statement by one of the members that he had been taxed on a crop of carnations, and the general opinion of members seemed to be that taxes are very unjust and irregular hereabouts when it comes to assessing greenhouses and their contents.

After adjournment the next thing was the bowling alley for the bowlers, and but for one thing many others of the club. The one thing is the fact that the crowd hat congregates about the "Central," in the basement of which the alleys are situated, is about the toughest in town and the more staid and careful members of the club do not care to be seen among them.

Business is much the same as last week. Weather about two shades better. All eyes and coal piles are straining Easterwards. MACK.

Toronto.

I omitted to mention before that at the last meeting of the Association some remarkably good blooms of seedling carnations were shown by M. A. McPherson, gardener to Col. Sweny, Toronto, and by Mr. Geo. Hollis, gardener to Maj. Foster, Davenport. Mr. F. G. Foster, of Hamilton, highly complimented these gentlemen on their success in hybridizing.

Lycaste (or Maxillaria), Harrisonæ is a lovely orchid and deliciously scented. Mr. Geo. Vair has three or four plants blooming profusely now. In one corner of his orchid house is a large old Wistaria sinensis which is a sight to behold just now; there is not room for another raceme on it and it fills the air with a faint spring like odor.

The latest prize donated for competition at the chrysanthemum show is a gold medal. The secretary thinks that if he keeps the prize list back a short time longer two or three diamond pins might be offered; however the proof goes in tomorrow.

The aquatic fever is spreading. Mr. Geo. Reeves, of Reservoir Park, has got it now and will fill a pond at one of the pumping stations with victorias, nymphæas and nelumbiums. The pond is heated by the condensed steam from the boilers. The Horticultural Gardens would make a big hit by converting the present rosary into a lily pond.

Why is not Cattleya chrysotoxa in the Dictionary of Gardening—not even in the supplement? Is it of very late introduction? E.

Flower Markets, As I See Them.

To my mind they are not necessary and have exercised an influence that is the reverse of beneficial to the trade.

From the very nature of things business done in such a place must be done quickly, even carelessly and very often ruinously to both buyer and seller. To the former because the articles have been handled "without gloves" and are bound to show the treatment received and also the want of proper surroundings and conditions to keep the flowers in the condition necessary to give satisfaction to the consumer; and to the latter, because as the first hours of the business day pass by and the stock remains unsold the temptation to make a sale becomes so great that price becomes a secondary consideration and eventually the remaining stock is sold, or rather sacrificed sooner than to take it back.

The result is that the tremendous difference in price works to the great disadvantage of those who handle good material carefully and at fair profit as against the peddler of the various varieties. In plain words, as between producer and retailer, no matter whether they deal directly or through commission men, the result is that the custom of dumping large quantities of flowers into the hands of irresponsible parties to be sold for what they will bring is a repetition of "killing the goose that laid the golden egg," for one is life to the other, and any action taken by the producer to interfere with the legitimate and respectable retailer acts as a boomerang and comes back to the door of the producer.

And the commission man is (if you like) a necessary evil, especially as the tendency to become specialists is increasing among the growers, and it is a natural tendency that should be encouraged as he acts as a collector and is in his way invaluable to both buyer and seller, so long as he acts honestly between the two.

There is no doubt that in cheapening the method of reaching the consumer the best interests of all who are legitimately connected with our profession is injured in direct ratio to the cheapness and consequent careless and crude methods adopted and it is the most injurious to those who should be most interested in upholding each other. No one will doubt that the setting exercises a wonderful influence on the appearance of the gem, in other words that a single flower sold in a well preserved condition, nicely displayed, though more costly, would be vastly more appreciated by those who love flowers for their true worth than an armful dumped carelessly at their feet.

Washington, D. C. J. R. FREEMAN.

Prophetic.

The poet must have had in mind the qualifications necessary for a successful commission man when he wrote:

> "A mind of broad and vigorous scope,
> A penetration quick and keen,
> An insight into things unseen,
> A liberal dower of faith and hope."

A.

Dodder on Fuchsias.

I have been studying a parasite growing on a fuchsia for some time, but have been unable to find its name or the best method of removing it, so I write you for advice. The parasite spoken of is a small salmon pink thread-like vine twining around the stem and leaves of the fuchsia —always from left to right with here and there great clusters of pure white five petaled blossoms and no leaves. On the side of the stem next the fuchsia small tooth-like appendages sink themselves into the bark of the fuchsia, causing a marked swelling. I have cut the parasite in several places, but it seems to have no injurious effect. Will you (or some of your readers) kindly tell me the name of this vine and how I can best destroy it?

HUGH C. MCLEAN.

[The parasite is some species of dodder (Cuscuta). It is easily enough gotten rid of, just pick off every bit of it and throw it away. It grows from seed in the ground like any other plant, and as soon as it gets up an inch or two and catches on to some nearby plant it fastens itself to the host by wart-like suckers and the part in the ground dies off, leaving the dodder vine in its true parasitic condition twining around the plants and subsisting on their juices much to their injury. Dodder is quite common out of doors in summer, especially in meadows. Probably there were some seeds of it in the soil you used to pot your fuchsia in.]

Hinze's, McGowan and Lamborn.

My Hinze's White are doing splendidly, grown in a light soil with rose house temperature. There has been no cropping and during the winter I doubt if the batch varied 25 a week. I have Lizzie McGowan and L. L. Lamborn in same house and they are almost a failure. Why? Do they need more heat or a heavier soil? JAS. FROST.

THE WHOLESALERS.

We take pleasure in presenting in this number of the FLORIST portraits of a few of the wholesale cut flower dealers.

Without the help of the commission man the distribution of the enormous quantities of flowers grown for the great Easter festival would be a difficult problem. Through his enterprise and energy the market for the producer has been immeasurably extended and the distant consumer obtains access to the best sources of supply on terms of equality with his metropolitan brother.

In a business where quickly perishable goods are handled the position of middleman is by no means an enviable one, for to find fault is an easy accomplishment, and to satisfy both growers and customers under all circumstances is out of the range of possibility, yet it will be generally admitted that the good services rendered and the influence exerted by the commission man in the marvelous development of the cut flower trade during the past 15 years can scarcely be overestimated.

The FLORIST extends an Easter greeting to the commission men, and hopes that there will be a full supply of all choice and desirable stock and a full demand for everything sent in; that the weather will be neither too hot nor too cold; that the expresses and the railroads will all be on time; that customers will all be satisfied, and that the return mails will bring back not grumbles but bank checks; so that we shall all be satisfied and the Easter of 1892 pass into history as a "hummer."

IN OUR last issue an error in the advertisement of Mr. J. C. Vaughan, on page 766, made him offer plants of the new chrysanthemum, Mrs. Louis Childs Madeira at $1 a dozen when the price should have been $1 each. A new chrysanthemum and a prize winner at $1 a dozen was so plainly an error that the blunder must have been apparent to all.

The "White Day Lily"

An Illinois reader takes me to task for this name, page 659. He writes: "I want to make a fuss about your term 'white day lily.' * * I presume you mean Funkia subcordata, the white plantain lily. I have a friend who thinks Latin names an abomination. He has an elegant summer home and spends yearly quite a sum for plants for his place. Some years ago while visiting east he saw what his host called a 'day lily,' so next spring he ordered of an eastern florist 25 day lilies. When they bloomed the tawny Hemerocallis fulva greeted him! He was disgusted, dug them up and quit that 'thief' of a florist. Next year he sent east again, to another florist, he did not want that tawny flower, but a true day lily. He got Hemerocallis flava, the yellow flowered one. So he d——d all florists alike. Then he came to me. I told him it was Funkia subcordata he wanted, and got it for him, so now he is happy."

He should have been specific. Had he said *white* day lily he would have got at first just what he wanted, for the white flowered funkias are the only plants under the sun known as white day lilies, and by this name they were known for many years before the name "plantain lilies" was invented. White day lily is the only common name used by Dr. Asa Gray for Funkia subcordata.

Aside from this, however, I am satisfied that "white plantain lily" is a better name. Perhaps there are some readers of the FLORIST who would like to know how this name originated. In June 1881 Mr. William Robinson, the greatest reformer in ornamental gardening who ever lived, himself wrote about the "White Day Lilies (Funkia)." But it is evident he disliked the name, for four weeks later we find him appealing to the public thus—"WANTED, AN ENGLISH NAME. Will any kind friend tell us how to christen harmoniously Funkia?" And further on he tells us that a well known bulb grower "in contrition for his having inflicted more barbarous names on the horticultural community than any other person" will give a full collection of the cultivated funkias to the person "who finds a happy and appropriate English name for Funkia." A fortnight later Mr. Edwin Jackson, of Llandegai, Wales, wrote: "Will the Plantain Lily suit this plant as a popular name? The plants bear a fair resemblance in habit of leafage and inflorescence to the familiar plantain of our fields and roadsides, Plantago major; while the Funkias are one branch of the very extensive lily family." To this Mr. Robinson replied: "A good name." "PLANTAIN LILIES. Henceforth we propose to use this as the English name of Funkia." And so it has been accepted generally. WM. FALCONER.

The Seed Trade

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

WASHINGTON.—Simon W. Sanders, of Wilmington, N. C., was in the city recently to appear as defendant in a case before the United States Circuit Court, wherein the constitutionality of the new seed law in North Carolina was to be determined. The case was postponed until the Federal Court meets next May.

News Notes.

ONEONTA, N. Y.—B. Ackley is building a new house, 60x19 for roses.

ALTON, ILL.—The greenhouses of F. W. Doepke were recently destroyed by fire. Loss total. Cause unknown.

WHIPPANY, N. J.—W. I. Wilson is preparing to build a greenhouse 20x100, with cold frames attached. He will grow violets and carnations.

MINNEAPOLIS, MINN.—The Minneapolis Floral Co. has opened a floral store at 40 Fifth street S. under the management of Robert Tomlin.

NILES, MICH.—The Michigan Central Railroad will soon build two greenhouses here, to be devoted to the growing of plants for the decoration of station grounds along the line.

SAN FRANCISCO.—A new feature at the spring show of the California State Floral Society will be an exhibition of song birds, it being held that flowers and song birds belong together in spring.

Treatment of Portia Carnation.

Will some carnation grower please inform me through the FLORIST whether there is any special treatment whereby I can increase the size of the flowers of Portia, as mine are growing so very small now? When I asked the man I bought the plants of he said it is their nature, and another grower told me the reason is because I have them growing on raised benches, that they should be grown in solid beds. L. T.

SECRETARIES, when mailing premium lists, should not fail to send a copy to every other trade organization. The list in our new directory gives the names and addresses that you want.

JOHN SAUL, Washington, D. C.

Chester County Carnation Society.

The regular monthly meeting, April 2, was well attended, several new growers being present. The table was graced with a handsome display of cut flowers. "L. L. Lamborn," from J. J. Styer, a sample of the variety for which he took first premium at the exhibition of Penna. Hort. Society last week. The secretary showed a sport of Buttercup resembling in general appearance "Sunrise," but a brighter yellow and quite fragrant, stems long and stiff. Edward Swayne showed fine sprays of Blanche Ferry sweet pea, cut from vines grown among his carnations. Seed sown in November and December.

"Red Spider" was discussed at some length; "Antipest" was recommended by those who had used it. Mr. Styer reported red spider very abundant in the fall, entirely destroyed by repeated and abundant spraying of cold water.

The secretary reported a presentation of binder and copy of Florists' Exchange and also of a copy of the new directory by the Am. Florist Co.

To overcome overproduction or a glut in the market it was favorably suggested to instruct consignees to donate surplus stock to city hospitals when practicable.

Edward Swayne gave a resume of the honors secured by the local growers at the recent exhibition of the Penna. Hort. Society, at which four first, one second, the Wentworth prize and a certificate of merit were bestowed on various members of the society. After a few witty remarks on the trials of an exhibitor he favored the society with the following "Ode" prepared by a member:

There are no flies upon the "Belt,"
Where grows the "Flower Divine;"
No moth nor rust corrupt its gloss,
Lord! How the buckles shine.

And Pennock, Swayne and Styer
Have fought a braver fight
Than the three Romans at the bridge
In harness for the right.

And all around the "Girdle"
Shall shouts and laughter be,
And smiling of fair women,
And strain of minstrelsy.

But over in —— —— ——,
Shall be cursing underbreath,
And weeping deep, and wailing loud,
And gnashing of false teeth.

Yes —— —— —— —— —— ——
And —— —— —— —— ——
With —— —— —— —— —— ——
And —— —— —— ——

P.

SITUATIONS, WANTS, FOR SALE.

M. ROSCOE SANUDERS, S. 4th St., Aurora, Ill.

Eel Worms.

The article in your issue of March 10 regarding eel worms in roses no doubt has caused many a florist to think of the great losses sustained through this pest. It seems strange, that although houses upon houses of roses had been planted only to be afterwards pulled up and thrown in the rubbish pile, none of our eastern rose growers had the matter long ago more thoroughly investigated.

Mr. I. M. Harshberger of the University of Pa. some time ago had examined some of my roses and said that a worm called Heterodera radicola, invisible to the naked eye, was doing the mischief in the roots of our plants. He says it has been found on the roots of clematis, also on violets, coleus, bouvardias, vincas and other plants. They came originally from fresh manure. Severe frosts or lime would surely kill the worms in the soil, but when once in the roots nothing could be done to eradicate them. As this information entirely agrees with Mr. Byron D. Halsted's article, it is therefore all the more convincing that we have learned the right cause of club root on roses and other plants.

We have lately several times watered some affected plants with lime-water and they are already in a greatly improved condition. As the application of lime will have to be repeated there might also be danger in overdoing it in this direction.

Perhaps Mr. Halsted or some other reader of the FLORIST could tell how often plants could be watered with lime-water and how much air slacked lime could be used to one cubic yard of soil to destroy the worms and yet not be injurious to the plants. This would be of great benefit for the preparation of our soil for the coming season. Mr. I. M. Harshberger and Mr. Byron D. Halsted are certainly entitled to our sincerest thanks for their information in this matter. A. LUTZ.

ETHEL BROWNLOW.—Regarding this rose Mr. J. H. Dunlop, Toronto, writes: "We find it very free and profitable to force. It is one of the best keeping varieties I know of." He adds that the blooms sent us last week, and which we noticed in last issue, were cut two days before shipping.

The Nursery Trade.

SAN JOSE, CAL.—A movement is on foot looking to the establishment of a fruit exchange.

AN ITEM in a daily paper informs us that a California rancher announces that he is growing olives grafted on the native willow.

WISCONSIN will spend $3,000 upon its horticultural exhibit at the World's Fair. Cranberry culture will be made specially prominent.

SACRAMENTO, CAL.—The Northern California Citrus Fair Association met here March 23 and adopted by-laws and elected delegates for the ensuing year. The association has been allotted space at the World's Fair and it will be filled by the members of the association from each of the counties represented.

A COLORADO paper prints the following adv. in its reading columns: "The young nurseryman grows more expensive as he grows older; and we must do more business to meet the additional expense. Call at our office in Kendall & Dawley's cigar store, and H. E. Bocker will book your orbers for nursery stock. Geo. J. Spear." Is this a good adv. for George or not?

NEWPORT, R. I.—At the last meeting of the Horticultural Society, Prof. H. J. Wheeler, chemist of the R. I Agricultural Station, read a very interesting paper entitled, "The recent investigations in relation to the nitrogen supply for plants." Prof. Wheeler narrated somewhat in detail the various and numerous experiments which have been made in endeavors to solve the mysteries connected with this phase of plant life. He stoutly maintained that the free nitrogen of the air is not absorbed or taken in through the leaves as has been held by some scientists, and sided with the majority who at present teach that the plant is fed with nitrogen through the work of bacteria at the roots.

For Spring Potting.

The best time to pot off small Palms and Foliage Plants is NOW, and they will then be ready to fill houses with for summer, after bedding plants are cleared. Cheap plants as follows:

	Per 100
Aralia Sieboldi, 2-inch pots	$10.00

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following. Speak quick if you want them.

We want to create a little diversion for Easter (April 17). To accomplish this we offer as follows in plants:

	Per 100
Genista pubescens, 5-inch in bloom	$ 25.00
Azaleas, 6-inch, in bloom	100.00
Fuchsias, 2 to 3 ft. high, 6-inch, in bloom	20.00
Hydrangeas, 6-inch, in bloom	20.00
Roses, Mme. Gabriel Luizet, 6-in. in bloom	25.00
" Gen. Jack, 6-inch, in bloom	25.00
" Mrs. Jno. Laing, 6-inch, in bloom	25.00
" Ulrich Brunner, 6-inch, in bloom	40.00
Lilium Harrisii, 4 to 10 blooms	50.00
Callas, 5 to 8 inch, in bloom	20.00
Cinerarias, 5-inch, in bloom	15.00
Carnations, 5-inch, various colors, in bloom	12.00

All the above in splendid condition for Easter sales.

In Cut Flowers we offer the following. Send in your orders and have them booked ahead.

Roses, American Beauty, A 1 stock.
" Bride.
" Mermet.
" Laing.
" Bennett.
" Brunner.
Callas.
Harrisii.
Carnations, white and red.
Marguerites, large blooming white, large elegant plants, 24 to 30 inches high, full of bud and bloom, just the thing for Easter work. Will pack light. $15.00 per 100.
Smilax, we have 1,500 strings to offer, medium length and stock A 1. If you are going to buy smilax in small or large quantities in the next thirty days don't fail to write to us, as we are in the market to sell.
☞ Bottom prices on any of the above.

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.
Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.
Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.
In buying see that you get the true variety, as it has many aliases. If you are short of room now we will book your order and ship any time up to May 15th. **Price, strong plants, $8.00 per 100.**

For bargains in Plants, see issue of March 24.

Guiheneuf's Red-flowered Mignonette.

My mention of this new variety, page 709, brings me the following from a gentleman in Massachusetts:

"As you refer to Guiheneuf's red-flowered mignonette in last week's FLORIST, it may interest you to hear of my experience with the man. The editor of the *Garden* (London) last year referred pleasantly to this strain and I wrote to Guiheneuf for seed lists, which came at once, and which I now enclose to you. I then ordered some seeds from him, at the same time enclosing a P. O. order for $1.50, the amount they came to. But he never sent me the seed nor acknowledged the receipt of the money, nor of two other letters I have since written to him. Now I know the P. O. order was cashed in France. And I suppose any later letters were received by him or they would have been returned. It is well to keep a mental record of such transactions."

This case speaks for itself, it needs no comment from me. Redress is out of the question. At the same time that $1.50 may yet burn a big hole in the pocket of the recipient. Pay $2 and join the Florists' Protective Association of America, then lay your case before it.

WILLIAM FALCONER.

Is the Cold Storage of Valley a Secret?

Among the many valuable papers read before the various clubs of the country, and which from time to time have appeared in the columns of the AM. FLORIST, on the treatment of the different bulbs grown by florists, I have never seen one on the cold storage of valley. That it is so stored all readers of the FLORIST are aware, and any information on the subject would, I am sure, greatly benefit a large number of florists, especially the retail florists who grow their own stuff.

Gas Tar on Hot Water Pipes.

Referring to the matter of gas tar on pipes of greenhouses, I think methylic alcohol (C. H. 4 O), called common wood naptha or alcohol, will remove the stuff from the pipes, without the labor and risk of burning them. It would be worth while to try it, as it is recommended to me by competent chemists. It is, however, necessary to procure the genuine article. Yours truly,

L. C. L. JORDAN,
Asst. Sec'y of the Cooper Union, N. Y.

To the sufferer from gas tar on hot water pipes I would advise the following simple experiment: Cover the pipes with a heavy layer of tobacco stems and keep same well dampened. I think the stems will absorb the fumes from the tar and prove otherwise beneficial. By renewing the stems from time to time the effect of the tar will cease and the enormous labor of taking out the pipes and burning same can be saved. C. N.

ORDER a copy of our new directory now if you have not already done so.

WE HAVE in hand several valuable articles that we could not find space for in this issue.

WHEN this issue reaches our readers they will be in the midst of the rush of Easter business. May the supply be adequate, of good quality, and all be sold at satisfactory prices.

Decorative Plants and Floral Decorations.

BY THOMAS CARTLEDGE.

[*Read before the Florists' Club of Philadelphia, April 5, 1892.*]

The first place in the list of decorative plants must be conceded to the stately and aristocratic palms with their beautiful and graceful foliage, their great durability and easy arrangement into graceful groups. Without them no decoration seems complete. I therefore propose taking them up first, mentioning only some of the best and most useful varieties for the different styles of decorations we have to do in pursuance of our calling as decorative florists, asking your kind indulgence for any shortcomings or errors that may be found in this hurried sketch of so important a subject and hoping there may be something in it useful to the craft.

Areca lutescens I place first. It is well known to us all as an admirable plant either in small or large specimens. Tall and exceedingly graceful in habit; when well grown it stands handling well, is not easily broken and is very effective when arranged with latanias and other larger leaved species, or when in perfect condition showing well as a specimen plant for a corner or limited space, where only one or two plants can be placed to advantage. One of its best qualifications is, it may be grown to quite a large size in 8 or 10-inch pots, quite a consideration when it is understood the distance and height we sometimes have to carry our plants and the number we often want to crowd into our wagons. When well grown and thoroughly hardened it stands a reasonable amount of cold and it does fairly well as a house plant for vase or jardiniere if properly watered and occasionally washed or sprinkled, and gives satisfaction generally. We have sold more arecas than any other palm this winter, and with very few complaints from our customers.

Latania borbonica has all the good qualities of the areca, but it is entirely different in its character. Its large fan-shaped leaves fills in a gap in all our decorations, giving a most desirable effect and variety, so necessary, especially in all our larger decorations. Indispensable for house use and in my opinion the very best plant for the fashionable vase, China and other kinds, that have been used the past year or two for parlor and window adornment. Its low spreading leaves, its beautiful glossy green foliage, its ability to stand both heat and cold, drought and over-supply of water, makes it especially durable, and thus causes it to give general satisfaction—an everyday plant, reasonable in price, effective and beautiful in appearance, even if it is not so graceful in its smaller forms. The glut predicted for this palm by some of our growers has not reached this town yet, nor do I expect it to do so for some years to come, though I often wonder, when I see the large quantities growing, where they all go to. There are so many avenues open for its use. I could speak of its good qualities for out of doors but will find enough to say on indoor decorations to satisfy us all at this time.

Kentia Belmoreana and K. Forsteriana are among the toughest and most durable of our palms, of graceful and handsome appearance when well grown, not easily damaged by changes in the temperature or other causes, stands more gas and the hot dry air of our homes better than any other palm. It must become extremely popular when better known. Its large dark green and graceful leaves are most effective in group arrangements or as a single specimen. As a large plant in a tub or pot it is most useful, especially where only one plant is needed and in a position where it is desirable to see and move around it. I have seen it stated in some of our horticultural papers that the florists of London had proposed to boycott it on account of its good staying qualities, in houses doing so well under all circumstances, though a good plant for their patrons, not so good for the dealer and grower—something easier killed being considered better, an erroneous conclusion in my opinion.

Seaforthia elegans is away up as a useful decorative plant. It can't be beat in a large decoration, where its handsome curving leaves have a chance to show to advantage. They add to the much desired variety and break up the monotonous character of many decorations. Their large, easily broken leaves and susceptibility to cold make them unhandy for our wagons in wintry weather, as they soon become disfigured and useless, but I still consider they are a necessity, as they are so easily and quickly grown and cheap, paying well for themselves if we can only use them a few times. They quickly throw up new leaves to take the place of the old ones, but they get too large to be used in a very few years.

These remarks apply almost equally well to the Ptychosperma Alexandræ, only that it does not grow beyond us quite so fast, nor does it recover so quickly as the seaforthia.

The date palms, or phœnix, in their many species and varieties are most useful. They do not grow out of reach if kept in small pots and cramped for room, though they are not so pretty as some I have mentioned, but they will stand any amount of abuse—freezing, crowding into wagons, gas and heat. Their peculiarly formed and silvery foliage make them desirable even for variety. We have some plants that have been in use for 10 or 15 years and are quite presentable yet, doing their full share, especially in cold, bad weather.

Caryotas, I am pleased to see, are being grown again. A stately and peculiar

palm, its leaves attract immediate attention and add to the beauty of our decorations. Although it does not fill up much it is pleasing to those who are fond of plants and curious to the general public who see them occasionally.

The bamboo palm or rhapis are also of a tough character, dwarf growers, stand cold well and are not easily broken. They are excellent for a permanent decoration—that is to say, where plants are kept by the week or month, as they never give out if watered occasionally. Areca Verschafleltii is also a beautiful palm as a single specimen, especially for a conservatory or an extra nice decoration, but too tender and easily damaged to come into general use.

Cocos Weddeliana is the handsomest of all the small growing palms. It is graceful and elegant in all its forms, lasts well in the house, and just the thing for a fernery, table or mantel. It stands bad treatment better than many of the coarser species. It is indispensable and cheap enough to be used in large quantities.

I think the palms mentioned are about all that are necessary to equip a first class decorative establishment, though doubtless there are many others both beautiful and useful, but they have not come under my notice.

I will now briefly mention a few of the most useful plants outside of the palm family for decorative purposes, and a few of the more desirable flowering plants.

Dracæna fragrans has been one of our most popular plants the past two or three years. It stands handling well and is graceful and effective as a single specimen in a vase or a large pot, and it does well generally if watered carefully, as it will not stand being either too dry or too wet. *It has sold well this winter.*

Pandanus utilis and P. Veitchii are also much used, especially for vases. P. utilis, with care, will do well in any moderately heated room, and it is especially suitable for table decoration, and the beautiful variegation of Veitchii, coupled with its symmetrical habit, makes it a welcome addition to any group where variety and variegation are desirable.

The Norfolk Island Pine (Araucaria excelsa) is one of the most symmetrically graceful plants that we have—just what is wanted for mantel or table; holds its own well in the house, rather expensive yet, perhaps, but its durability and beauty makes it really one of the cheapest plants for the purpose indicated. I have seen plants of it that have been kept in a dwelling house all winter looking just as well and as bright as those kept in the greenhouse.

The Ficus elastica or Indian rubber plant has also become one of our staple plants, not only for use as a house plant, but in its larger form for decorations. Its beautiful large glossy dark green leaves making up for its general stiff appearance, and its ability to stand rough usage makes it a general favorite.

Other well known plants I may mention in this connection are some of the tall growing tree ferns, always showy and graceful. Aspidistra lurida—both green and variegated, called by some the "Iron plant," I suppose on account of its hardiness and willingness to stand hard knocks without showing any ill effects.

There are many beautiful flowering plants that are much used in connection with those that are grown only for their foliage, but I propose only to mention at this time a few of the more generally used ones, having already exceeded the limit that I placed on this paper when starting out to prepare it.

One of the most desirable and elegant flowering plants for this purpose is Acacia pubescens. It is unfortunately so scarce that we are seldom able to get it. There is no plant that I know that can take its place. Its graceful habit and color when in flower can not be equalled.

The poinsettia is a grand plant for early winter decoration. Its brilliant coloring when arranged with palms and some of our beautiful variegated plants is very effective and especially useful when there is not much bright in flower. It also has reasonable price and durability to recommend it, as it carries well and can be used several times if given reasonably careful handling.

Stevia is another good plant for fall and early winter. Useful because it can always be had in quantity in its season. It has a weedy look about it, however, that I never admired.

Chrysanthemums (fortunately for the rose grower their season is a short one) are hard to beat. They help us out grandly during the time they are with us, when all other flowering plants are scarce, as they can be used to good advantage massed in colors or separately or mixed though not too plentifully with our foliage plants. They are beautiful for a decoration in a church, with a background of graceful foliage, especially the beautiful white and yellow varieties as they are now grown, fine flowers, good clear colors and an abundance of bright clean foliage. I call to mind one occasion when decorating for a golden wedding—a *carte blanche* order—we had used up nearly all the flowers we had, such as roses, etc., when late in the afternoon our patron insisted on having one more room decorated that had been overlooked when the order was taken. I was in a quandary but happened to think of the large quantity of yellow chrysanthemums we had on hand. With a faint and weary heart fearing lest they would not be accepted (they were not as popular in those days as they are to-day) I suggested them and happily they were adopted as just the thing, and the result was a surprise. It was the most elegant room in the house—so appropriate to the occasion. We received many warm compliments, besides using a lot of plants that otherwise might be wasted. I have felt grateful to the chrysanthemum ever since, and I expect I always will be.

Azaleas come on in good time and make a bright show in our groups or masses. Elegant in every way for mantel, table or vase, their pure white and clean bright colors can not be excelled among the flowering plants grown. They have sold unusually well this winter and have given general satisfaction. We would advise plenty of water as they are hard drinkers when in full flower and when in the dry, heated rooms of dwelling houses.

Hydrangeas, Paris Daisies, now coming in along with the Harrisii lilies and callas, give us about all the flowering plants needed for the general run of floral decorations of which I had intended to speak. But I am sure this paper is long enough already, so will leave it to some future date, when I hope to have more time than I have had at my command for this occasion to speak to you on this very important subject.

Cocos Australis.

(*In some catalogues "Deplothemium Campestris".*)

This palm is one of the best for outdoor decoration, its bluish tinted graceful leaves making it very attractive. It needs to be kept in a cool house as it is impatient of heat and gets scale at once if kept in a hot house. In New Orleans there is a fine specimen out in the grounds of Dr. F. G. Richardson. If we mistake not, in some place south it is bearing seed. It is rather slow growing.

The plant figured is 20 years old. It is said to make a stem 25 feet in height. It is a native of Paraguay, according to the Encyclopædia of Nicholson.

Washington, D. C. WM. R. SMITH.

Our Telephone.

"Hello, central, give us Jackson Dawson at the Arnold Arboretum, Boston."

"Hello Dawson, is that you?"

"Yes, I began to think it was about time for the telephone to get to work again. Glad you've woke up."

"How about those roses you grafted a few weeks ago? How did they turn out?"

"Good. They are blooming now and are a batch of as pretty little plants as you would wish to see."

"It seems to us that the process might be of value to the FLORIST's readers. Can not you tell us about it?"

"Yes; I don't see why it isn't a good thing for florists. It is just eight weeks since I grafted those roses. That is, I grafted from 1st to 15th of January and have had them coming into flower in succession ever since March 1."

"What varieties do you use?"

"All the popular hybrids, Luizet, Rothschild, Magna Charta, any of them, they all do well. For stock I use the Rosa multiflora."

"Where do you get your multiflora stock?"

"Raise it from seed. It's no trouble at all. The seed from which these stocks were raised I sowed on the 12th of last April. So you see it is considerably less than a year from the time of sowing the seed till I have a handsome plant 15 to 18 inches high, in a 3 or 4-inch pot, with fine foliage and a first class bloom on it.

"On the approach of freezing weather I dug up the multifloras and heeled them in in a cold frame ready for use.

"For grafting I cut the plants off close down to the crown. I side grafted with cuttings having from one to three eyes, using no wax, simply tying them in with raffia. When this method of cutting the seedlings off close to the crown is followed I don't think there is the least chance of their suckering.

"As fast as the grafts were made I packed them away in damp moss in bundles of 50 in a close frame at a temperature of 50° to 55°. By the end of a week they had knit so they were ready for potting. I put them in 3-inch pots, then left them in a close frame for ten days, by which time lively root action had begun, and they were then brought into the house and grown on in the usual manner.

"The roots go to work at once. You ought to see the bundles of healthy roots on these little chaps and the breaks are just as strong as they would be on large plants.

"And why aren't they better for table decorations than cut blooms? They will keep very much longer and in far better shape in a warm room."

"You don't get a flower on every plant do you?"

"Out of this lot more than 50 per cent have set buds, but a good many of these were only single eye grafts. I believe that by carefully selecting the wood, using none but that which is strong and well ripened for the cuttings and making

SPECIMEN COCOS AUSTRALIS AT THE BOTANIC GARDEN, WASHINGTON, D. C.

two and three eye grafts, fully 90 per cent of blooming plants may be had.

"Bear in mind that this is the first year I have attempted it on a large scale. I have often advised others to try it, but they wouldn't do it. Now I have put in ten or eleven hundred grafts, and if they had been in 5-inch pots instead of threes the plants would have been still stronger. Judging from the interest in this subject already manifested by many gardeners, I believe it to be a question of but a few years when the majority of our growers will do their own grafting. Importers will be in the minimum and imported stock will cut but a small figure in our trade."

"Are you doing any hybridizing now?"

"Yes, I am at it all the time. Among others I made a cross between Rosa Wichuraiana and Jacqueminot last year, and the result is six little plants all different from each other. I am much interested to see what the flowers will be. The foliage on all of them is very handsome. I have just fertilized Rosa grandiflora with pollen from Mme. Gabriel Luizet. I find that I have better results with one pod inside the house than with a hundred outside. Whether insects got into them after I had done my work I don't know, but they were always unsatisfactory outside."

Sarracenias.

These interesting plants seem to be neglected by all but a few plant growers in this country, although they are a very handsome and interesting class of plants. As the taste for aquatic plants is on the increase these plants will be found very useful for the borders and sheltered nooks of the lily pond.

They are very interesting and ornamental plants for the greenhouse and many of the varieties, especially the hybrids of later introduction, are remarkable for the beauty of their curiously shaped flowers, which range through all the shades of red, yellow, crimson and white.

The leaves of the sarracenia seem, like those of the nepenthes, to have the power to secrete a fluid that is very attractive to all kinds of insects, and as the inside of the pitcher shaped leaves are lined with hairs pointing downwards it is impossible for an insect once enclosed to make its escape.

When grown in the greenhouse the soil best suited to them is composed of equal parts of fibrous peat and living sphagnum moss. The pots should be well drained. It is a good plan to stand the pots in pans of water during the growing season or else to plunge the pots in a bed of moss to keep the roots cool during the summer. During the growing season they want an abundant supply of water, but in winter very little will do them, though they must never be allowed to become dry or to feel the want of water. They do much better for a little shade during the summer.

S. Drummondii: This is one of the finest of all the varieties. The pitchers are from two to three feet high, slender at the base, and swelling upwards, of a light green color, the lid and throat mottled with crimson. The flowers are crimson.

S. flava: There are many types of this variety. The pitchers are about two feet high, slender at the base and widening upwards, forming a large open throat

with a broad lid. The entire leaf is bright green and the flower light yellow.

S. psittacina: This is a decumbent species. The pitchers are bright green with crimson veins. The head or hood which is formed by the top of the pitcher is bright red blotched with white. The flower is purple. It is a very distinct and interesting species.

S. rubra: A slender growing variety, growing from one to two feet high. It has bright green pitchers, the lid and throat small, striped with red veins. The flower is red and very sweet scented, having the odor of a violet.

S. variolaris: The pitchers of this species are about nine inches high, bright green in color and with a recurved top which makes them appear hooded. The upper part is mottled with creamy white. The flowers are a light yellow.

There are a number of garden hybrids of recent introduction in Europe and which are said to be a great improvement on the parents, having many entirely distinct forms and colors of pitchers and much larger and handsomer flowers than the older varieties. One of the hybrids, S. Popei, is, from the description, remarkable, having parti-colored flowers, the petals being deep crimson on the outside, having a border of yellow, the center being flushed rosy pink. This variety it is said was obtained by crossing S. flava with S. rubra. JAS. S. TAPLIN.

Maywood, N. J.

The Carnation and its Culture.

[A paper read before the Gardeners' and Florists' Club of Boston, by Mr. R. T. Lombard.]

I have often heard the remark made by those who have listened to essays read in this hall, that the subjects have been treated in a too general way, that the ordinary cultivator received less practical information than was expected. I hope I shall not err in the other direction, by going too much into detail and state facts and experiences already familiar to you all.

The carnation has been cultivated for centuries and under the care of man has steadily improved until it ranks as second in the plants we cultivate. Nature intended that this plant should be produced from seed, and the more rapid method of increase by cuttings is of a comparative recent date. However interesting its history may be to some, I do not propose to take your time to follow it from the wild flower of the fields to the beautiful varieties so recently exhibited in this building, but rather to treat it as it should be propagated and grown today for commercial purposes. The most favorable time to propagate is during the months of January and February, when lengthening days seem to give the plant fresh vigor. The parent plant should be healthy and in a state of active growth.

From such a plant take off the side shoots, well up from the base. These pips may be cut at or pulled from the joints. I have been unable to detect any difference in their striking root, whether they are cut or pulled. If a knife is used it should be sharp, the cut clean. The wood should be soft and tender. I take off about one half inch of the grass and am positive it is a benefit to do so. Your propagating bench should be in a house where the temperature has a range of not less than 40° nor more than 50°, with bottom heat 55° to 65°.

The sand after being made firm and compact (I use a brick for the purpose) should be one and one half inches deep and the cuttings put down ¾ inch and the sand pressed firmly about them; should be thoroughly wet and kept moist until taken from the sand. It makes no difference what kind of sand is used, if it has had proper treatment before being put in the bench. No sand should be used from a bank and put directly in the bench, for all such sand, without exposure to the light and air, is sour and a positive injury to cuttings. The best sand comes from the borders of ponds, or the banks of rivers, where it has had abundance of sun and air. If this cannot be obtained expose your sand for at least ten days, to these conditions. Put in fresh sand for every batch of cuttings. Never permit a draft of air to strike your cutting bench. Sunlight is less injurious than drafts of air. I am a believer in the north exposure system. Under these conditions in forty days you ought to root 95% of any variety except Wilder, Silver Spray and Buttercup, which require a much higher temperature—10°. These rooted cuttings should now be potted in thumb pots or put in flats in good soil. Place them on a bench where there is some bottom heat, give a night temperature of 50° and shade for a few days. They will be established in four weeks, when they should be placed in a cool house 35° to 40° at night with plenty of air, where they will harden off and have a brief rest, which all carnations should have. They may be put out side in cold frames about April 7th. They can be safely planted in field May 10th. A heavy frost, or even if the ground should freeze, they will not be injured and seem to like it. The carnation is half hardy and will live in field all winter if slightly protected. The plants should be set about one foot apart each way and pinched back as often as required. Rapid growing varieties, like Mrs. Fisher, Hector and Ferd. Mangold, should be topped as late as Aug. 20th. and those like Hinze's White and May Queen, not later than August 1st. No fixed rule can be laid down; the careful cultivator will soon be able to decide for himself when to stop pinching back.

The soil either in field or house to suit the carnation should be rich and as soft and smooth to the touch as an infant's cheek; a fibrous loam, well enriched, with either well rotted stable manure, at the rate of 12 cords to the acre, or commercial fertilizer at the rate of two tons per acre. They do equally as well on either. Sod land ploughed in April eight inches deep is the best. Fresh stable manure is injurious.

In April prepare your soil for your houses, using one-fourth manure, three-fourths sod or loam. Add to this one bushel of wood ashes to every two loads of loam. Fill your benches or beds in September, six inches deep (it will settle to five inches) and the soil should be just moist and so light that no trowel need be used when you do your planting. Your plants will succeed equally as well in solid beds or benches. Beds require less care and do not dry out so quickly in winter, which is very important. About September 20th you should begin to house your plants and this is the most important period in their life. Like the boy who leaves his happy home to seek his fortune in the great busy untried world he knows so little of, a step right or a step wrong, either makes a useful noble life or an existence of misery and ruin.

When you lift your plants the soil should be dry, so dry that when the fork is placed under the plant and it is lifted all the roots both small and large will be unbroken and very little if any loam remain on them. The object should be to save the roots and leave the soil in the field. It is a great mistake to suppose that a ball of soil is necessary. In planting, take the plant in the left hand, with the right make a broad shallow hole in the soil, spread the roots well, draw the soil over the roots and with both hands press the loam very firmly, the harder the better; when thus fixed in the soil the plant should be no deeper than it was in the field. If you do set it deeper, your plant will be very likely to die before January. This deep setting is the chief cause of plants dying out during the early winter. Stake and tie the plant at once if it will not stand erect. I have no patience with those who are so shiftless as to leave their plants grow wild and rot away, a kind of slow death. They were not intended for such a destiny. Water them thoroughly and syringe several times a day, if the sun shines, for about four days, by which time they will have thrown out new roots by the hundred seeking for water and food. The house should be shaded a week or two, and for this purpose I use clay or loam, taking about a quart of either, mixing it with about two gallons of water and throw upon the glass with a dipper; it is quickly done and the first rain takes it off clean. The plants should have a rich dressing of commercial fertilizer or bone black about Jan. 15, March 15 and May 1, and kept nicely staked and tied until May 1, when they may be permitted to take their own course. You should not forget that your plants have passed the summer under natural conditions; bright sunshine, dew, rain and an abundance of pure air; their rapid growth has shown you what they can do if treated right. Try and follow these conditions by giving abundance of air, an evening syringe for the first two weeks; leave ventilators open at night for a time after fires are started; open the house doors to create a draft; thus gradually get them acclimated to the new conditions. Always admit air when the outside temperature is above 32°. I am fully satisfied that carnations cannot be grown at a profit unless they are kept growing, and they cannot to any extent if the night temperature falls below 50°. I prefer 55° at night, and 70° to 75° during the day. If your house gets below 50° a cold sweat seems to gather on the plants and does them about as much good as a wet blanket on a man on a frosty morning. I know it is injurious for growing plants to go through this cold sweating process. More than one half the cause of carnations bursting their calyx is permitting the temperature to go so low that growth is suspended. If your plant is warm enough to work at night, the petals of the flowers will push out their natural length and in the morning will open without bursting, but if it lies dormant at night and no growth is made, as soon as the sun warms up the house the petals at once expand, the calyx bursts, the inner petals being short and half developed. Carnation foliage should be kept as dry as possible during Dec. and Jan.; at other times they enjoy a shower bath on bright sunny days. If you will treat your carnations in the manner described success is yours and a reasonable return may be expected. You may have disease called spot but early starting of fires generally pre-

LARGE FLOWERED PRIMULAS

vents it, or if it comes it is short lived after the fires are well under way. Green aphis will surely greet you, but a weekly smoke will prevent their increase. Red spider will not be seen if your houses are kept damp, and cut worms soon succumb to Dalmation Powder. If I were asked what varieties to grow, I should say try many kinds, discard those that do ill, hold fast to those that do well. No variety succeeds with every one, yet most any one can grow some varieties. I believe in the old saying, "Do not put all your eggs in one basket." As a rule I think the grower gets the best returns who grows the largest number of varieties. New varieties come, live their brief existence and pass away. Crimson King, DeGraw, La Purite, Snowdon and many more have come, filled their places well and gone. In a few years Grace Wilder, Anna Webb, and Century, with their lesser rivals, will be no more. New ones are coming rapidly to the front, some superior to the old sorts and others no improvement. Yet in these as in everything else merit will assert itself and the fittest will survive.

Those who are skillfully laboring to improve this beautiful and useful flower in producing seedlings at much labor and expense, are doing a good service, and if they sometimes make a mistake by sending out a poor one, we should not judge them harshly but remember that charity is the greatest of the Christian virtues and we should exercise its precepts.

Replying to questions from the audience, Mr. Lombard said that he got rid of the cut worm by using Dalmation powder. He stated that four years ago he had a house which contained 2,200 plants of carnations and 3,600 strings of smilax.

The cut worms got into it. He tried picking them off but found it made no impression upon their number. Tried Paris green; they revelled in it. Hellebore; they grew fat on it. He got not a hundred flowers from the house in four months. Had tried to catch the moths with a light, but they seemed to prefer darkness rather than light. Finally on the advice of a friend he tried the Dalmation powder. Sifted over the beds five pounds of powder the first evening; on the following morning found half a peck of cut worms. Used three pounds of powder the next night and was rewarded with a quart of the worms.

A few more small applications of the powder eradicated the worms completely.

Speaking of his success with various varieties, he said that Buttercup requires a firmer soil than he was able to supply.

Ohio will not do well in any soil. Lizzie McGowan with him did grandly up to Christmas, since then no good. Silver Spray comes only semi-double in his soil.

Proposes to give Puritan a good trial next winter. It will be a long time he said before we get anything better than Grace Wilder. If Grace Battles does as well as it promises, it will stand a good chance of superseding Wilder.

The Carnation Disease.

The new carnation disease, of which an able scientific description appeared in the AM. FLORIST, is to all appearances not as dangerous to carnations in general as it would seem. At least I tried to infect some of the older varieties with the rust and was so far unable to do so.

I noticed the disease first last fall, after housing the carnations, on some of the Fred Creightons, one of the newer varieties bought from the east last spring, which by the way is otherwise a very strong, fine grower. The lower leaves showed first those brown dots, which soon took the oblong shape till the plants were thus punctured up to the higher leaves on the flowering stems. A batch of Silver Spray standing near the Creightons soon caught the rust, but it did not make such headway as on the Creightons. To find whether other varieties would be susceptible to the disease I put some Garfields and Hinze's White close among the then badly overrun Creightons, but for the last two months they have flourished and fail to show any signs of the disease, standing unconcerned among their rust-ridden colleagues.

All my carnations are grown in pots for market sale, not for cut flowers, and therefore I look not only for a good flower, but also for a shapely and healthy plant. While raising some of the older best pot varieties in quantity, I make it a rule to try some of the newer varieties each year and if they don't come up to the requirements as a pot plant, or if they be troublesome like the above two varieties, I simply leave them off the list. For the cut flower grower it will be different, however, especially as to the well being of the renowned Silver Spray, and there the old ounce of prevention is worth many times it weight of cure.

I will state here that I did not try any remedies, but have no doubt that several of those recommended will prove efficient and may yet eradicate the disease before it gets a stronger foothold.

St. Louis, Mo. ANDREW MEYER.

The Lamborn Carnation.

During the fall our Lamborn carnations bloomed splendidly and we had formed a very high opinion of it, but after the dull winter months set in they did not fully open their blossoms, in fact many of them did not more than half open and they then gradually faded off. Has any one else had the same experience and is there any remedy? They were grown in a night temperature of 45° to 50°, day from 55° to 60°. B.

CARNATION EDNA CRAIG.—This carnation, which won the silver cup at Philadelphia, was one of a batch purchased by E. G. Hill & Co. from Mr. Fred Dorner in 1889 for $500. Regarding this batch of seedlings Mr. Hill says: "The varieties which led me to purchase the lot, and from which I expected a return on the whole investment, were all disappointing, while some of the least promising and those that had not flowered at the time, have since made Mr. Dorner's name prominent as a raiser of new carnations. The variety Edna Craig was the least promising of the lot, but liking its growth and color it was given a trial, and each year it improved on the development of the year previous."

Large Flowered Primulas.

What is the standard size of primula flowers? is a query propounded by Mr. A. E. Wohlert, Altoona, Pa., and who sends along, as a sample of what he can do, a photograph of four specimen plants of Primula sinensis showing flowers 17 inches in diameter. We present herewith a reproduction of the photo. Mr. Wohlert writes that the color of the flowers on the plants shown was pure white, dark carmine and pink with orange center. The plants were in 5-inch pots, started July, 1891, and photographed February 1, 1892. The seed was obtained from a grower in Denmark.

Regarding the size of primula flowers Mr. John Thorpe says: "A 2-inch Chinese primula flower is a very good specimen. But we are not going to *stop* at 2 inches. I well remember when a flower of an inch and a half was a wonder."

Work for the S. A. F.

Would it not be well if the S. A. F. would take up the question of free trade or reciprocity between Canada and the States so far as it affects the florist trade generally.

We have to pay 20 per cent duty, but that is not always the worst—the damage caused by delay, the extra trouble and loss of time makes it much more annoying. Surely if the S. A. F. were to

unite their forces their respective governments might be induced to take the duty off at least perishable goods, but a club single handed could not do much.

Perishable goods ought to come in free, fast and fresh as possible. Then how much more business might be done.

G. M.

Roses as Grown in Ireland.

[Written by Hugh Dickson, Belfast, Ireland, and read before the Social Florists' Club of N. J.]

By way of introduction I may be permitted to say that the paper I am about to read before you this evening is the outcome of a joke played upon me by my warm and very much respected friend John N. May when I had the pleasure of visiting his famous establishment at Summit when journeying through your country last year. Why such an eminent rose grower as Mr. May should impose upon me this duty is rather beyond my comprehension, but I take it that he had before his mind the vastly different circumstances attendant upon the cultivation of roses in the two countries and probably desired to draw comparisons between the methods adopted.

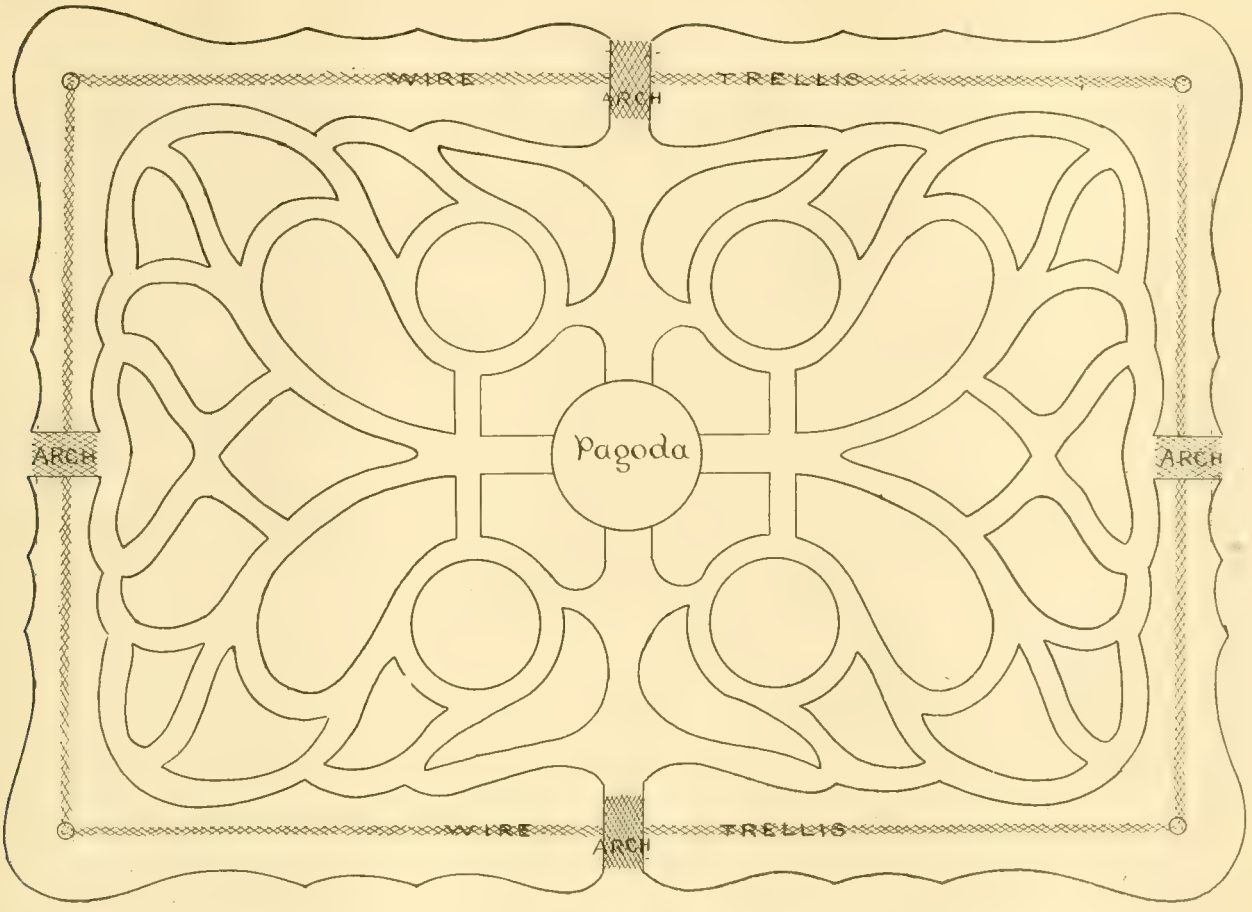
Within the limits of such a paper as this I must of necessity touch very briefly upon the more important points. The remarks that I now make apply solely to rose growing as practiced by us in the open ground. My experience dates from early boyhood and which in my earlier years was fostered and nurtured by my father, one of the oldest, and I may say without egotism, the most successful Irish rose grower of his time. I do not presume to teach anyone possessed of a better knowledge than myself, on the contrary I simply detail the methods of cultivation that I have found best calculated to grow roses successfully, whether for garden decoration or for exhibition purposes.

To begin, the first consideration should be the situation. In choosing a situation for roses it is essential to have a thorough circulation of air, ample sunshine and shelter. That these elements may be secured select an open piece of ground with a south or southeast aspect where you can have the uninterrupted rays of the sun from the time it rises in the morning until mid-day, with partial shade for the remainder of the day. Such a position is an ideal one and the best illustration I can give is a sloping hill facing south or southeast with its back to the southwest. Shelter is an absolute necessity, especially in the spring months, from the northeast winds which do much damage during the blooming season. If shelter does not exist naturally on the west and north sides a narrow belting of shrubs should be formed, or hedges planted will almost answer the same purpose; all that is required is something to break the force of the wind so as to check its violence before reaching the plants.

Soil is the next consideration. A really good rose soil is a rich, unctuous loam of good depth, resting on a well drained subsoil. Where such exists all that is required is to trench the ground early in autumn, adding a good supply of manure. Where such soil does not exist the grower must provide as near an approach to it as possible. Knowledge and labor can make almost any land suitable for growing roses with very fair success. Let me suppose the soil at my disposal is a heavy undrained clay, where after a spell of rain the water lodges in pools on the surface; with proper manipulation such land can be made to grow magnificent roses; all that is required is to thoroughly drain, trench and manure. Drainage is a very material element in the successful growing of roses, so that this operation should be performed with the utmost care and skill, always bearing in mind that "whatever is worth doing is worth doing well." Nowhere does this old adage apply with greater aptitude than in the observation of the entire routine necessary to the successful growth of roses. The drains should be three feet deep, laid out with the fall of the ground, filled with three-inch tiles, over which should be carefully laid nine inches of broken stones, the whole being covered with straw, sea weed or other rough material, so as to keep the drain clear and in good working order. The drain may then be filled with the soil which was thrown out, taking care to raise it above the surrounding surface to allow for sinkage. The next operation should be to trench or deeply dig the whole piece, working in a plentiful supply of manure as the work proceeds. On such a soil equal proportions of cow and horse manure is best, as the former alone is too cooling.

In the case of a very heavy soil with a subsoil of clay it will be necessary to lighten it somewhat; this will be best done while trenching and I know of nothing to equal lime, broken about the size of an egg, strewn over the ground, digging it in at various depths, allowing it to dissolve or slack in the soil. When applied in this way the gas as it escapes helps to mollify the soil. Care should be taken that the lime is not placed in contact with the manure. Where lime is not at hand road scrapings, peat mould and wood ashes or such like material will serve to loosen the ground.

In the event of the ground being light, sandy or gravelly, which are the worst possible for successful rose growing, it will be necessary to improve it, and this is best done by covering the ground to a good depth with a heavy loam or well worked clay; or the cleanings of ditches mixed with gas or quick lime, allowed to lie for a season, after receiving occasional mixing, makes an excellent material for top dressing.



Roses are gross feeders and to secure good growths and a plentiful supply of first rate blooms their wants in this particular must be attended to, otherwise the results may be disappointing. The best general manure is that obtained from the farm yard. In this we have all the elements necessary for plant food. Cow or pig manure is probably best for roses; certainly such is the case on light lands, while for heavy lands I give the preference to horse and cow manure that has been slacked in a heap for a month or so. Artificial manures may be a necessity to exhibitors and should be applied at intervals throughout the growing and blooming seasons. There are a great many varieties of these and almost every exhibitor has his favorite. A cheap and at the same time a most effectual one is made of "night soil" and soot, to which should be added twice the bulk of burnt earth. This should be mixed up under cover about a month before use and should be sown over the ground at intervals of a month. Hoe or lightly fork in. Liquid manure is productive of beneficial results and should be applied throughout the growing and flowering seasons. For this purpose the drainings from the stable, cow house and house sewage are best. These should be diluted before application, say to about one-third of their original strength. Give a copious watering rather than a niggardly supply; the latter only cooks the ground and probably never gets the length of the roots. The best time to apply it is either during or after rain.

Roses are propagated from buds and grafts, also from layers and cuttings. The latter methods are not much practiced here, the best results being obtained from budding. The stocks in use are the manetti, brier cutting, brier seedling, De la Grifferæ and polyantha. The last named being only recently introduced here I cannot speak of its usefulness as a stock. The various growers are partial to their particular stock; in England the dog brier has the preference, in Ireland it is the manetti. The De la Grifferæ I do not like in any particular and to my mind it can be well dispensed with. Probably climate and situation should be taken into consideration in arriving at a decision as to which is the best stock for a particular locality. All things considered I would be inclined to give the first place to the manetti as a stock for almost all the varieties in the hybrid perpetual and moss sections and to the brier (either cutting or seedling) for the tea scented and Noisette classes. Roses that have been budded on manetti stocks that have been properly prepared, i. e., "eyed" when cutting, re-examined and shortened after being taken from cutting beds preparatory to planting in the quarters, are certain in the majority of instances to give highly satisfactory results. In County Down we have roses on manetti quite twenty years old, still clean, healthy and giving abundance of good flowers.

If it is the intention of the grower to propagate his own roses the first thing to be done is to secure a quantity of strong manetti stocks that have been thoroughly eyed or disbudded, on which to grow H. Ps only, but if a few tea scented are desired it will be necessary to procure either cutting or seedling briers. The roots of these should not be tampered with in any way. It is different with the manetti; we shorten them to half their length, so as to induce abundance of fiber.

Planting stocks should be done from October till March, but the earlier the better. They should be planted in rows about two feet, six inches wide, allowing 15 to 19 inches between the plants.

The budding of plants is an interesting operation and is easily done, probably not so easily described, a practical lesson being better and more easily understood than a written one. Budding is usually done from July to early in September. Much depends on the condition of the stock, if the sap is running freely it can be successfully done up to the middle of September. To bud successfully proper shoots from which to take the buds to form the future tree must be selected, as much depends upon the condition of the shoot. The best is a half ripened shoot. When this has been cut off the plant it will be necessary to remove the spines and leaves allowing half an inch of the foot stalk to remain. This enables the operator to insert the bud and at the

PLAN OF THE ROSE GARDEN AT THE WORLD'S FAIR.

same time is a shield or protection for the eye. The shoots so prepared should be packed away in damp moss and only taken out as required, as success greatly depends upon the careful handling of the shoots from the time they are cut off the plant until the bud is inserted in the stock. All now being in readiness to make a start the operator must be provided with a regulation budding knife, then take the shoot in the left hand, the top pointing outwards, make an incision about half an inch above the eye, cutting slantingly until past the center when the bud may be drawn off, turning it over between the forefinger and thumb of the left hand so as to remove the small piece of wood that has been cut with the bark. This being carefully removed and the base of the bud shortened it is then ready for putting into the stock. To prepare the stock to receive the bud make a cut in the stem immediately over the roots in the shape of the letter T, lift the bark on each side of the cut with the bone end of the budding knife and insert the bud, pushing it well to the base of the incision and cutting away any bark that may project over the top cross cut. The bud must then be carefully tied in with a suitable material (we use raffia). In tying, start well below the incision, bracing firmly both above and below the eye, finishing off clearly above the cut. In spring—say March—the stock requires cutting over about an inch above the bud. As the young buds grow they must be tied to stakes or supports of some kind, otherwise the wind will blow them out, an event that too frequently occurs during stormy weather.

Probably the grower instead of propagating his plants will prefer to purchase them. In such a case it is most important to procure strong, well rooted plants and such as have been worked on disbudded stocks and not uneyed ones, as is too frequently the case, many growers objecting to the cost of eyeing the cuttings; in such cases the roses are very frequently strangled by the suckers, which are certain to rise from stock so prepared. It is therefore necessary to place your order in the hands of a reliable nurseryman, whose stock is grown as recommended, with instructions to despatch quickly and with the roots carefully packed. The plants on arrival should be unpacked in a shed where the roots must be watered and covered with some protecting material, as when exposed to cutting or frosty winds irreparable injury is done.

The next operation will be planting, and if to secure successful results this must be carefully attended to. If a large plot has to be planted and the ground has been prepared as recommended the operation is a simple one. Begin by leaving a margin of 18 inches between the wall and the first row of plants; with the garden line marking out the position, proceed to throw out a trench sufficiently deep to allow the plants to be placed about two inches above the juncture of the bud with the stock and wide enough to permit the roots being spread out to their fullest extent. Avoid crushing and crumpling the roots. When the plant is in position place a shovelful of the soil over the roots and tread firmly. The row may then be dug up to the width of three feet, leveling the surface nicely for this purpose. I prefer the digging fork as it leaves a rougher and better skin on the soil. Spades are liable to gloss it too much. All that is required now is to apply the measuring stick, which should be two feet six inches long, and then shift the line to the marks, cutting away the extra six inches which has been dug up and which makes a proper seat for the next row of plants. Continue in this way until the plot is completed. When finished give the entire plot, where possible, a coating six inches deep of well decomposed stable and cow manure; this will protect the shoots from injury by frost; let the litter be placed through the branches, it won't injure them. It makes a perfect protection in addition to its manurial value. In spring this mulching may be forked into the ground.

Pruning is another operation second only in importance to that of planting. Success largely depends upon the manner in which it is performed. The best tool for the purpose is a good sharp knife, which enables the operator to make clean cuts. Avoid the seccateur which makes a bruised cut. The season for pruning varies according to locality and variety. For general purposes the majority of the H. P. section may be cut back at intervals from the second week in March until the end of that month, while in regard to tea varieties the end of March and beginning of April will be early enough. The first act of the operator will be to examine the bush thoroughly, making mental note of such shoots as require to be entirely removed. Those being cut away the remaining shoots must then be cut down to three or four eyes each in the case of moderate growers, while the more vigorous may be left with six to eight eyes.

In all cases endeavor to prune to an eye looking outwards. To many people such pruning may appear unduly severe, but such is not the case as by leaving a limited number of eyes to each shoot the blooming shoots are more vigorous than those left with double the number of eyes. As soon as the plants have started to grow it will be observed that there are more shoots than it is prudent to allow the plants to carry; a number should be cut away, removing any growing inwards, and which in all probability would fill up the center of the plants. This is what is called thinning the shoots and it will be patent to the observer that such a course tends to strengthen the selected shoots, which will consequently give finer flowers.

To secure blooms of first size and quality it will be necessary to resort to disbudding. This may be done by removing the side buds, as soon as they have sufficiently developed, without injury to the center bud. At this stage the shoots, all of which are crowned with flower buds, should be supplied with stakes, this will prevent injury from high winds. From this time onwards the rosary will be full of interest and will require constant care and attention; copious supplies of liquid manure will now be useful, and regular hoeings to keep down weeds will now be necessary. A close lookout must now be kept for insects; the rose maggot usually makes its appearance early in June and is only to be destroyed by hand picking. Every leaf with a contorted appearance should be examined and as the grubs are destroyed it is advisable to remove the leaf as it frequently saves a second examination. Greenfly or aphis will likely be troublesome; this is best kept in abeyance by syringing with a wash made up of four ounces of Quassia chips boiled in one gallon of water, to which should be added while cooling four ounces of soft soap, and before using two gallons of water may be added and leave it sufficiently strong.

Mildew generally makes its appearance during July and may be kept in check by dusting the affected parts with sulphur or syringing with sulphide of potassium. Beyond disfiguring the plants mildew does not seem to injure them, the tops of the shoots being usually the only parts affected, and these in pruning are cut away.

Spring Exhibition Pennsylvania Horticultural Society.

(CONTINUED.)

Philadelphia is further behind in the number of orchids grown to supply the demand than she ought to be considering the volume of trade done in other cut flowers. Had it not been for the generous support given by Messrs. Pitcher & Manda, Short Hills, N. J., and Messrs. Siebrecht & Wadley, New Rochelle, N. Y., the display of orchids at the last show would have been rather meagre. True those which came from Mr. Chas. Dissel, of this city, were creditable indeed, but to Pitcher & Manda belong the honor of having the best and largest collection.

Among them were noticed Cattleya Mossiæ matutina, an early flowering variety of the type, and the yellow tulip orchid (Cattleya citrina) of Mexico; Phalænopsis amabilis and P. Schilleriana; odontoglossums in variety, such as O. crispum—Josephine variety, O. crispum aureum, O. sceptum, O. triumphans aureum, O. Pescatorei, O. Rossi majus, Lycaste Skinneri and the rare L. Skinneri alba. There were some fine flowers of Cattleya Lawrenciana as well as the older species, C. Trianæ, and the rarer C. T. alba.

Among other orchids there were Dendrobium nobile—dark flowers, D. Wardianum, Phajus grandifolius, Vanda Amesiana, Epidendrum vitellinum var. majus, with bright orange colored flowers, a color not at all common among orchids, and an oncidium, the name of which I forget. Cypripediums were out in strong force. There was the grand hybrid C. Schroderæ splendens, the result of a cross between C. caudatum and Sedeni, and the new species Amesianum, as well as caudatum, conspicuum, Dominianum and some fine forms of C. Boxallii and villosum. Two other hybrids were C. Pavonianum inversum (which was obtained by crossing C. venustum with the pollen of C. Boxallii), and C. lacidum (cross between C. Lawrenceanum and C. villosum superbum). Besides orchids there were some good examples of anthuriums, which heightened the effect very much. There were A. Brownii, Clarkianum, Reynoldianum and Reynoldianum magnificum, Rothschildianum, Rothschildianum album, Veitchii rubra and some other rare sorts.

In Messrs. Siebrecht & Wadley's exhibit were Cattleyas Trianæ, citrina, Lawrenciana, Mossiæ, Schroderæ, Lycaste Skinneri, Lælia purpurata, Phalænopsis amabilis, P. Schilleriana, Odontoglossum crispum and O. Pescatorei.

In Edwin Lonsdale's lot there were ten or a dozen plants of Cattleya Trianæ, and no two of the flowers on the different plants were alike. This goes to prove that in the wilderness they seed freely and the seed germinates with more certainty than it does in cultivation. There were also a number of plants of C. Lawrenceanum. The same is true as to this species as stated in reference to the cattleyas; the flowers vary considerably. C. Harrisianum, with its parents, C. barbatum and C. villosum, one on each side of it, was an object of interest. Not because it is new, rare or costly, but because it was the first hybrid raised in cultivation and it is a good and useful sort. Dendrobiums nobile and Wardianum and the yellow flowered, sweet scented D. suavissimum added much to the general effect on account of its highly colored flowers; the rich brown spots in the throat of this blossom gives it a rich effect.

EXHIBITION ECHOES.

Mr. John McGowan sent some fine blooms of seedling and other carnations. Whether they were entered for competition or not I do not know. The judges did not pass upon them. I forget whether "Iago" was one of them or not. "Iago" is a very fine crimson in color, of good size and has the advantage of a stiff and erect stem.

The seedsmen were out in force. H. A. Dreer, H. F. Michell, John Gardiner & Co. and H. G. Faust & Co. all had trade displays, all of which were very attractively arranged.

The members of the committee on awards should in all cases form a part of the committee on the revision of schedule, even if they shall be known only as an advisory committee. They are more likely to know where the defects of a schedule may be and could offer valuable suggestions, that if carried out would strengthen the prize list.

When the judges were examining the collection 25 plants, different varieties, in bloom, some one deplored the fact that the competition was not keener in that class, whereupon another remarked that it was a difficult matter to get enough variety in bloom at that season of the year. Here is a case where, if the old schedule passed through the hands of the judges first before it went to the regular committee on revision, that part of it would be modified in some way, so as to encourage a better showing at the exhibition in 1893.

Suppose we look into the premium list and find out whether there were any classes in which there was no competition. There were no entries for zonal pelargoniums, nor for fuchsias. There was a time when William K. Harris exhibited these graceful flowering plants in fine form. There were no pot roses, nor the stately and magnificent rhododendrons. What an excellent effect fine large plants of these would make in any exhibition! It is high time somebody took up the calceolaria in this city. There is a class for these beautiful showy flowering plants, but no competitors. Mr. W. Falconer had some fine examples of excellent culture at the Eden Musee, New York, some years ago. We did not even have any forget-me-not, nor stock-gillies. Neither Rex begonias nor those with tuberous roots were there. No amaryllis nor ranunculus. Yes, we did have a dozen anemones. Somebody wanted to pass them off for ranunculus, but John Bell would not have it that way. Out of four classes for hyacinths only in one was there any entry and there only a solitary one. There was one exhibitor only in each of the following classes: Tulips, 6 varieties, 6 of a kind in 6-inch pots; tulips, one box (flat) of 50; tulips, 12 varieties, 12 6-inch pots, 3 of a kind in each pot; narcissus, 24 single trumpet varieties; narcissus, 24 Poeticus varieties; narcissus, 25 double varieties. None in class for N. Tazetta (polyanthus). There were none for Lilium longiflorum, 6 plants, nor Lilium Harrisii, 6 plants, nor L. candidum, 6 plants. It is very hard to account for these classes being entirely neglected, or almost so, by exhibitors, and especially is it noticeable when nearly all of the plants in them are flowers that bloom in the spring tra la.

It should have been stated in the report that Carnation Edna Craig, winner of the silver cup, was exhibited by Messrs. E. G. Hill & Co., who bought the seedling from Fred Dorner. Mr. Robert Craig is luckily the joint owner with Messrs. Hill & Co. of this valuable variety. L.

Roses at the World's Fair.

The display of roses at the World' Fair promises to be a very important feature in the floricultural department. Foreign growers will be well represented and of course American growers will not be behind.

A space of an acre on the Wooded Island will be devoted to the rose garden, of which we present the accepted plan in this issue.

The applications for space have been very numerous and as the list will be pruned down to the most effective displays, the rose will be presented in her very best form to the visitors to the great fair.

THE Toronto Gardeners' and Florists' Association has issued a list of premiums for its third annual chrysanthemum show, to be held Nov. 8 to 10 next. Copies may be had on application to the secretary, Mr. A. H. Ewing, 276 Victoria street, Toronto, Ont.

Boston.

Preparation for Easter is the main topic just now with grower, wholesaler and retailer. As by the time this reaches the FLORIST's readers they will be up to their eyes in Easter work and with no time to spare for even such a useful occupation as reading the FLORIST until Easter be past, it would be unprofitable to take up space here commenting upon the indications. Suffice it to say that there are a great many lilies in this neighborhood and unless appearances are very deceptive they will be just in the "nick of time." Certain it is that there has been no overstock of lilies during the past week, although the prevalence of steady warm spring weather would rather favor such a condition, and it looks as though if the weather had not taken this turn some of the boys would have stood a good chance of being left. The florists' windows have given no indication of the approach of Easter, their owners probably husbanding their entire strength for next week. Roses, especially Jacqs, have been very abundant.

Fast day, April 7, was an ideal spring day. The streets swarmed with people who sauntered up and down in endless thousands. The "street fakirs" were out in full force and judging by the crowds that constantly surrounded their fragrant wares the quantity of flowers which found an outlet through this questionable medium must have been enormous. The regular stores were correspondingly dull and mutterings were many and deep.

As to the quality of stuff in the fakirs' possession nothing derogatory can be said. Mermets, Brides, Perles, Niels and Jacqs, as well as the patrician Brunners, Luizets and Wabans, all in the very best shape; carnations of every hue including even the Golden Triumph, which thus reaches the street people before even it is in the hands of the growers of the country, violets, pansies, lily of the valley and the first cut of May flowers all were there in quantity unlimited.

Well may the store florists stop and give a very sober thought to this condition of things and cudgel their brains for a cause and a preventive. They might ask themselves why it is that Boston, the second floral city in the country in the quantity of its productions, is thus over run, and that new and rare varieties of flowers get their first introduction here to the public through such a medium. An answer and partial explanation might be given them by the wholesalers who have labored for years in the uphill and hopeless endeavor to regulate and control the marketing of cut flowers in Boston, and who have found their biggest enemy and most stubborn opposition in the retail florists, who instead ought to have been their most ardent allies.

The Gardeners' and Florists' Club too might remind the retailers of their neglect of that organization, formed originally for the good of all, and offering to them the benefits and power which result from union and organization, but depending up to the present time mainly upon the growers for its existence and support.

In the meantime the octopus is growing stronger every day, and its ultimate effect on the flower trade can only be conjectured. The street fakirs knew enough to place a proper value on organization. They have a Peddlers' Association and it adds in no small degree to their strength.

A Boston Journal reporter has been interviewing "a prominent dealer in cut flowers on Tremont St.," with the usual result. He has one man stocked up with 150,000 hybrid French cannas, and credits another "skilled florist" with paying from $500 to $1000 each for giant ferns. He dips into hybridizing too, and sweetly tells of the important part played by the camel's hair brush in replacing the Sunset M. Niel and Bon Silene "of a year or two ago" with the Waban, Bride, Jacqueminot etc. of today. It is a pity he didn't stop right there with his "fructifying dust," and one wonders why the "prominent dealer" didn't leave him there instead of stuffing him up with frightful stories about the payment "cheerfully" by a society young man last Easter morning of $300 for two corsage bouquets, the $24 per dozen roses, the upward tendency in price of violets, lilies, pinks, tulips and nasturtiums, and the young man who wishing to buy a few flowers for an Easter gift to his girl will hear prices that "will make his ears tingle." The number of Easter customers who will steer clear of the stores after reading such stuff, and who will leave their money with the street fakirs on account of it, is a matter of conjecture only, but it is hard to understand how any florist can be so crazy as to inflict deliberately such an injury to his own business.

On Sunday, April 3, about 10 or 12 acres of the Arnold Arboretum was burned over, a large number of shrubs and fine specimen evergreens being destroyed and a plantation of beautiful young oaks from 10 to 15 years old completely ruined. It was only by the liveliest kind of work that the fire was finally brought under control, the noble pine grove at the entrance and Mr. Motley's house having a very narrow escape.

Mr. Dawson naturally feels much dejected, but he was moved to wrath mingled with disgust on reading the account of the fire in the Monday morning paper. "Brush fire, no damage." He thinks that if a hen coop could only have been included with his rare trees the damage would have been at least $50, and the addition of one pig pen would have made it a "heavy loss."

Prunus pseudo-cerasus fl. pl. from China is one of the most beautiful forcing shrubs. Mr. Dawson has little plants of it, grafted a year ago, which were taken from the cellar a few days since and are now perfectly covered with a mass of delicate pink blooms.

Already several of the more precocious shrubs are in bloom outside. A handsome tree of Prunus Davidiana is at the height of its beauty, and down in the nursery the big cloud of yellow shows afar off where the Cornus mascula is doing its duty. L. Standishii, the earliest of the loniceras, is in bloom already, and among the smaller growing things are Andromeda Japonica which is just opening its buds, and Erica carnea which is covered with pink flowers. At the time your correspondent called Mr. Dawson was packing several large cases of shrubs which were going to Mr. Laney for the parks at Rochester, N. Y.

The April meeting of the Gardeners' and Florists' Club was well attended and Mr. Lombard's paper on carnations (which appears elsewhere in this issue) was received with much favor. The paper was illustrated by samples of cuttings, propagating sand, soil, etc., which were passed round for inspection. Four new members were admitted to the club.

On April 9 Joseph Tailby & Son showed at Horticultural Hall blooms of seven seedling carnations which attracted considerable attention. The more noticeable ones were a creamy white with deep carmine markings, a very large flat flower; a pure white measuring 3½ inches in diameter, petals very broad, fringed, rather loose; a deep pure yellow, very full round flower, and a yellow of lighter shade, not so full and perfectly smooth edges.

D. Zirngiebel says: "I have at last the 'Ideal carnation.' It is so large that I don't dare to tell the size, you would not believe me."

New York.

April opened with a warm wave that fairly demoralized cut flowers; roses were extremely plentiful, but soft and somewhat off color, and every variety of cut flowers suffered in transportation. Prices are somewhat limp, though they do not seem to vary much. Smilax still keeps scarce—in fact the same may be said of all florists' greens. Similarly, there is still a scarcity of small ferns; the New Yorkers have been sending to Philadelphia in search of them, but the dearth is felt in that city also.

Snowballs were among the choicer forced shrubs noted lately in pots; also some very dark colored lilacs. Easter stuff is to be seen everywhere; the florists are making large displays, and the number of irregular street dealers is very large. The preference seems to lie in the direction of pot plants for Easter gifts; next to this come loose flowers. Baskets or designs are likely to be greatly in the minority.

It is next to impossible to quote prices a week in advance; the volume of stuff already coming in is very large, but the demand will equal it. According to present prospects, prices will be much the same as a year ago.

Thos. Young, of Young Bros., has bought a country place in New Jersey in the neighborhood of Summit, which he will now make his home.

One of the handsomest wedding decorations of the season was arranged by Siebrecht & Wadley on April 7. It was to be considered an Easter wedding, and the flowers used all carried out this idea. On entering the main hall the eye was taken by masses of golden genista and acacia, disposed over the grille screening the stairway; tall lilies in pots stood below. The first reception room, like the hall, was white and gold. Groups of genista, daisies, hydrangeas and white azaleas filled the corners, flanked by tall palms. A particularly happy effect was produced where these white and gold flowers were disposed about a piece of statuary. The mantel, instead of the usual bank, was adorned with large plateaus of daffodils and daisies, while the large mirror at the back was screened by an extremely effective arrangement of asparagus fringed with cattleya blooms, giving the effect of a scarf thrown across it. Below the mantel was a bank of hydrangeas.

The second reception room, in which the marriage ceremony was performed, was entirely decorated with pink and white roses, an immense quantity of these flowers being used. The wedding canopy or bower was a most charming departure from the usual style. Instead of having the ordinary curtain effect it was simply a bower of roses, put across one corner of the room. The flowers—Brides and Mermets—were formed into long garlands, and these so disposed as to suggest the natural growth of a climbing rose. The effect was charming in its simplicity. The mantel in this room was banked with Baroness and Morrison roses, roses in pots being placed in front of it. Large

baskets filled with roses were placed on marble pedestals, while a screen of palms at one side formed a music gallery. The dining-room was entirely decorated in red—azaleas and roses in pots. Over the table was a round canopy of smilax; in the center a cornucopia filled with Jacq. roses hung downwards. The idea throughout the decoration was that of Easter, the flowers used giving a very spring-like effect. The bridal bouquet was lily of the valley.

Mr. Ed. Jansen reports from Paris that there are very few novelties for Easter. Plenty of fancy raffia handle baskets and palm leaf braid baskets. The old style "Fish basket", in all sizes up to three feet across, filled with blooming plants and with lots of ribbon to match the color of the blooms tied on the handles, are to be seen in all the florists' shops.

Philadelphia.

The April meeting of the Florists' Club was well attended. Mr. Robert Craig occupied the chair for the first time since November last. He is now in pretty good health and gaining strength every day.

The following gentlemen were elected to membership: Hugh Roney, W. B. Westcott, H. H. Beatty, Arthur Mallon, Jr., John W. Bishop and F. Blakeborough. The amendment to the by-laws prohibiting smoking was adopted without a dissenting vote, notwithstanding the fact that smoke from at least a dozen Havanas(?) was making its way towards the ceiling while the vote was being taken. A vote of thanks was given to Mr. W. R. Smith, of Washington, for books received and his generous offer of others. A Mr. Randolph, representing a hotel company of Chicago, presented a scheme before the club looking to their accommodation in a body at the World's Fair. Those who desired to go by paying $3.50 would be given a certificate which would entitle them to the benefits of the company. The matter was laid aside for the present.

The prize won by Geo. McLean in the recent bowling tournament was passed around and much admired. It is a handsome pitcher and tray of quadruple silver plate.

A special vote of thanks was given to John Westcott for his valuable services at the exhibition of the horticultural society.

The essay for next meeting was assigned to Chas. Longinette, who will prepare a paper on "How to conduct a retail cut flower store."

Thos. Cartledge read a very interesting paper on decorative plants and floral decorations for which he received the thanks of the club.

Mr. Craig said that in addition to plants mentioned by the essayist he would recommend Phrynium variegata, which he thought was a coming plant; it would be a good plant for a florist to get mixed up in. Would also recommend Bellina stricta, and he also thought that plants of Asparagus plumosus in pots would soon be largely used in fine decorations.

Business has not been good the past week, great preparations are, however, being made for Easter and all the signs point to a busy time.

The weather for the first four days of the week was intensely warm and very hard on flowers. Saturday there was a change and it is now quite cool. Anderson will be right in it so to speak, as he has a large house of fine Brunners and Laings that are just right every way, as he can cut almost the entire crop for Easter. He will have no competition as all the others are cut out. He also has the finest hydrangeas about and says they are all sold.

Mr. Harris broke ground for his new houses this week. There will be nine of them, each 100x20. He will take down some houses on the old place and use the glass in the new as far as it will go.

Liliums longiflorum and Harrisii are selling in pots for Easter delivery for from 10 to 12½ cents a flower. A great many lilies are to be seen that were cooked, or stewed, as one man put it. The foliage is all right, but the buds turned yellow and dried up when about half developed. It seems pretty hard to have all the trouble of growing lilies and then just when the profit is almost in sight to have to relegate them to the dump.

The wonderful increase in the number of ornamental accessories now demanded by the retail florist was brought forcibly home to the writer by a recent inspection of the stock in the florists' supply establishment of H. Bayersdorfer & Co., of this city. To one familiar with the limited number of articles considered necessary—in addition to flowers—ten years ago, the fact that such a variety, in such quantity, is now called for, shows the surprising growth of the trade. Here are a little army of skilled workmen turning out a remarkable variety of dainty baskets, wheat sheaves, plant and flower stands, and an endless variety of other things now considered necessary to the retail florist. Here many tons of Italian wheat are annually made up into the ornamental sheaves that are now in such demand, and this is but one item. Every season hundreds of new and novel things are added, either originated here or imported from Europe and the various floors are now packed with such an array of wares as would have completely bewildered the florist of a few years ago. Surely the florists' supply men are keeping up with the procession.

Chicago.

At the meeting of the Horticultural Society of Chicago last Saturday afternoon considerable routine business was disposed of and there was a lengthy discussion upon the proposed International chrysanthemum show in the Horticultural Building at the World's Fair next November. A committee was appointed to confer with the proper World's Fair officials in regard to the matter and to urge immediate action. Chief Thorpe stated that he had already received letters from European growers signifying their intention of sending plants for competition. As the World's Fair opens in May and closes in October the people will have no opportunity to see the chrysanthemum at the exposition except through the medium of an advance exhibition as proposed. It is also thought that arrangements may be made for a series of special exhibitions to succeed the chrysanthemum show and extend through the winter until the time of opening the great exposition in May. Orchids were specially mentioned as a class of plants that should be represented in this series of winter shows. A paper upon the treatment of Dutch bulbs, both indoors and out, from the amateur's standpoint, was read before the meeting by Dr. I. A. Kennicott. Three applicants were elected to membership. The secretary's report showed receipts and disbursements of $2,373.53 during the past six months.

Trade for the last two weeks has been very quiet, at the same time the supply being rather light and there has been no apparent glut of anything. We do not remember a season where the demand was so equally balanced by the supply. For a few days here and there the stock of roses accumulated somewhat and prices dropped accordingly, but on the whole the prices realized by the growers were far better than at any previous season in Lent.

It is difficult to predict what the supply for Easter will be. Harrisii lilies and callas, so far as we can judge, promise to be plentiful. Orders are booked for first class stock at $18 per 100 for Harrisiis and $15 for callas. L. candidum have been very poor so far. Although the supply is plentiful and prices moderate, the demand for this flower is very light. Bulb stuff of all kinds continues scarce. Good tulips particularly are in great demand, but very few can be had and there is little prospect for good stock for Easter. Lily of the valley and Romans also promise not to be over-abundant. Violets have been abundant and have kept up wonderfully well as regards quality. The average cut as seen in the market to-day has never been better for this season of the year. The prospect for roses seems good. Jacqs are coming in freely and of fairly good quality. Good Beauties are scarce and hybrids also. Perles, which were extremely scarce in the early part of the season, are quite abundant. Carnations continue in great demand and the white varieties particularly will be scarce for Easter.

E. H. Hunt has considerably enlarged his establishment in order to give more room to his cut flower department, and he now has an admirably arranged place.

Last week E. Wienhoeber & Co. gave a private exhibition of plants and cut flowers at their store on Elm street. A splendid display was made and it drew a large attendance of visitors. This firm does a fine trade and such displays as that made must certainly strengthen them with their customers.

Joseph Curran will remove to 175 Wabash ave. May 1.

Kennicott Bros. have leased a large store at 34 and 36 Randolph street and will remove thereto May 1. The new place has several times the room the old one afforded and is on the ground floor. Mr. Flint Kennicott has been confined to the house by illness for several weeks.

Mr. J. C. Vaughan returned recently from a trip to New York and Philadelphia.

Mr. W. H. Chadwick, president of the Hort. Society, is getting out plans for four new greenhouses, having sold his old ones.

Mr. L. T. Feck, of Boston, recently paid us a visit and loaded up the boys with heath and other stock not to be had here as yet.

Buffalo.

Our first club meeting since the election of officers was quite encouraging and several live subjects were discussed. The club is about to disseminate to our citizens the knowledge of how best to fight the various pests that destroy our beautiful shade trees. Another committee is assigned to work up the activity and sympathy of our police force and stop, if possible, the depredations on and stealing from flower beds and borders, of which there has been much complaint for several years past. The grounds and yards on our best streets and avenues are entirely unprotected by walls or fences of any kind; so much the better for the beauty of the street; and flowers on such grounds are not only a joy to the owners

but an embellishment to the whole street and city and it is greatly to the interest of the florists that the owners are not discouraged by losing what they have paid well for, and what is more have for months perhaps anticipated pleasure from. The judge who will deal with these miscreants has promised that the first wretch caught stealing from an early tulip bed shall be sentenced to 30 days' hard labor shoveling ashes from an 8-foot stoke hole and be dieted on raw calla bulbs washed down with tobacco water.

At the next meeting of the club the schedule of our chrysanthemum show will be submitted and the president, secretary and somebody else has promised "faithfully" to give us a better exhibition than ever and a balance on the right side.

An Interstate fair will be held here in August. It will be on a large scale; a big amount of money will be offered in premiums for plants and flowers. The directors have wisely left the management of the horticultural department in the hands of the Florists' Club, but not with financial responsibility.

William Scott and Joseph H. Rebstock visited Utica and Rochester recently. They seem to have called on almost all the florists. They report seeing some wonderful roses, but no smilax. They were impressed with the fact that Peter Crow was adding to his avoirdupois and bank account right along.

Mr. D. B. Long has started on a western trip, ostensibly to introduce his floral photographs, but no doubt to gather in a few points himself.

Wm. J. Palmer, Jr., has returned from a trip among the New York and Philadelphia men, and before long the fruits of his trip will be visible in town.

R. F. Laurence, the Main street florist, has taken into partnership Mr. E. M. Giddings. Mr. Giddings is an extensive and successful wholesale grower. The firm name will be known as Laurence & Giddings.

Adams & Nolan (the popular boys) will on May 1 remove from their present location to a fine large store in the best business block, 416 Main street.

Mr. Peck, of Boston, and Mr. Killen, of Chicago, were in town recently, and Mr. Gasser, of Cleveland favored us with a call and a good talk on his homeward journey from the east.

It is sad to relate, but nevertheless true, that the weekly meeting of the bowling club brings out a larger attendance than does the regular meeting of the Florist Club. Why is this thus? Is it because there are no refreshments at the latter meeting? I think not. The sedate Cowell, society man Rebstock, æsthetic Long, sportive Mepsted and corpulent Scott have a vision of a glittering gold piece. A dozen or more are just as foolish. Poor creatures, it is good for their health and as venerable "deacons" in other cities do as bad they must be excused.

On the occasion of James F. Crooker taking his chair at Albany on Wednesday last, as Superintendent of Education of the State of York, his friends here sent him a magnificent floral chair. A long description of it was given in some of our daily papers. It was of full arm chair size and faithfully worked out. Many thousands of flowers were used in it, mostly violets, roses, carnations and pansies. It was the work of florist J. H. Rebstock.

A funeral design out of the ordinary run was sent to the funeral of an engineer. Of course it was an engine. It was four feet long; base, of Mermets and blue for-get-me-nots; fly-wheel, one of Mermets and one of Wilder carnations; cylinder, of white carnations and Bride roses; steam chest, of purple pansies; eccentric wheels, of Perle roses; piston-rod, crank and valve, of violets. Scott turned out the engine. These mechanical designs should perhaps not be encouraged but if the people demand them the truer they are worked out the better. G. S.

OBITUARY.

SIDNEY S. JACKSON, The veteran florist and horticulturist suddenly but quietly and peacefully ended his earthly labors on the 16th day of March, 1892, in the 89th year of his age. Born on the 22d day of August, 1803, in Philadelphia, his parents removed soon afterward to New York and then in the year 1813 removed to Cincinnati, purchasing soon afterward the farm in Green township, Hamilton county, Ohio, and on a portion of the same which he inherited from his father has passed the major part of his life, and there yielded up his spirit to his Maker. His wife and bosom companion through life, preceeded him only about 2½ months and it was the privilege and pleasure of the writer to be present at their golden wedding, next, the pearl wedding and finally the 65th anniversary, on the 9th day of November last. Of the children which arrived at the age of maturity two daughters survive, one married, the other single. One son sacrificed his life in upholding the Union. Two sons were accidentally drowned. Upon the organization of the Cincinnati Horticultural Society, in 1845, his name appears as one of the charter members and he was and remained one of the active and solid members until its work and usefulness seemed complete only a few years since. Of the sixteen who composed the organization at that period only one survived him, viz: the venerable Jacob Hoffner, who is now nearly if not quite 93 years of age. It is not my purpose to go into details of his early life, only to say he evidently inherited from his father much of the sterling integrity and methodical ways he possessed. A record daily kept by his father from 1813 down to his death in 1848, of the weather, temperature, meteorological conditions, frosts, conditions of the fruits, is the most systematic, complete and accurate that could be made and interesting to examine. He possessed natural mechanical ingenuity and had his separate work shop with boiler, engine, lathe and other machinery necessary to work out many of the tools, knives and appendages necessarily connected with cultivating the soil, grafting, budding, etc., where he spent many of the happiest hours of his life.

It is sixty years or more since he turned his attention to the business and profession of plants, trees and propagation, which was at a period when everything connected with it was in a state of infancy, and in his anxiety to unravel, develop and improve the business became endeared to him and although of a very quiet, reticent nature, no one was a more observing or attentive listener than he, and when his conclusions were reached they were expressed in very few words and were almost invariably correct. He was an ardent lover of nature and in the growth and development of plant life his whole soul was wrapped up and everything under his charge was watched, trained and fed with the same care and anxiety a fond mother watches her darling child. There now stands in the front of his grounds probably the most symmetrical and finest cut leaved beech that can be found in the United States.

The characteristics of his life which stand out the most prominent and of which I could speak in tones that would vibrate forever upon the ears of all engaged in the same business and profession, was sterling integrity, honesty and truthfulness. No living man had those principles more deeply engraved upon his heart than he, and none was more careful and guarded to be always in the right. He said to the writer only a few years since he had in all his business career only one complaint to reach his ear that what he sent out was not true to name and in that case he was the victim of misplaced confidence. His ambition seemed to be not to accumulate wealth but to be always correct, truthful and right and then have a conscience that would not sear and burn when the fatal moment arrived. His spirit left the body while in a quiet sleep, without a groan or struggle, thus showing he had not lived his life in vain and had a fitting reward for his good deeds and honest heart. What more can I say? Yes, a noble life and most excellent pattern to imitate. T.

FREDERICK MAU, the well known orchid importer, of Orange, N. J., died April 11th aged 47 years. He had been sick with pneumonia and heart trouble since last December, but was improving when a relapse resulted in his death.

He was born in Brandenburg, Prussia. When a youth he was apprenticed to a horticultural establishment in Berlin, and was afterward employed in various parts of Germany. He was in Basle, Switzerland, in '73 and '74, and in Paris from '76 to '80. He then went to London and from there went to South America as a collector of orchids for Sander in whose service he remained several years. Later he collected on his own account, and in '85 he began the direct importation of orchids for sale at the New York auctions. He was the pioneer in this line. In '87 he built greenhouses at Union Hill, and from there went to Orange two years ago.

He leaves a wife and three little children. Mr. Mau was very highly regarded by all with whom he came in contact. He was kind-hearted and generous to a fault. While in Paris his generous assistance to Germans there seeking employment, at a time when Germans had little favor there, saved many a poor soul from despair.

During his service as collector he shipped Sander hundreds of thousands of Odontoglossum crispum, and discovered Cattleya Sanderiana, C. Schroderæ and others.

Baltimore.

Now comes the blooming spring, and the grass has grown three inches since the last note from this locality. The thermometer was actually seen at 83° in the shade by yours truly one day, and the whole week has been warm, almost sultry though cloudy weather has prevailed. An occasional prunus may be seen in full bloom, and the daffodils, jonquils and out door hyacinth have leaped into blossom in such wise that the town is full of them. Hydrangeas are apparently destined to be scarce at Easter though, in spite of the warm weather, but all other usual Easter stuff bids fair to be plentiful. Roses are going a begging, some very fine La France and hybrids among them, but all less perishable flowers are stiffening in price, and

things that will keep, as callas and most plants have crawled right up to Easter prices. Fine plants of Astilbe Japonica in full flower are selling at 25 cts; small callas in bloom at 30 cts; violets from 25 cts. per 100 up to 40 cts; La France buds 8 to 10 cts; Hybrids 15 to 20 cts; the Dutch bulb man is abroad and is raking in big orders, though the same old cry is still heard that forcing Dutch bulbs doesn't pay. If one were only to grow those things pronounced profitable by every one, what a limited collection he would have to be sure.

The Churches are coming to the front now, and little dinners etc. are not thought of in the burning desire to get a "better decoration than the other church will have, or than we had last year you know," for the same money. A pleasant custom that is obtaining here is to give each Sunday-school scholar a potted plant on Easter Sunday. Many of the Sunday-schools have adopted it.

Out door work has been crowded down by the bad weather, till in a week like this, between importunities to have yards and gardens fixed, trees and shrubs planted and the constant and increasing pressure of indoor work, the grower, if he be a jobber as well, has a harassing time of it and feels like changing the rhyme to read "A millstone and the human head are ever going round" for conflicting jobs and short time make him fairly dizzy. MACK.

St. Louis.

The florists report a good clip and all stock disposed of at good prices. Funeral orders continue as usual. For the season the number of weddings has been unusual, showing that St. Louisans are not all Lent observing people.

Mr. Jordan has had some very fine roses and narcissus this week. Narcissus trumpet major is now blooming in open ground.

One of the attractions in the window of the Chandler Floral Company is a fine specimen plant of Dendrobium nobile on which are 85 flowers. This firm sold a plant of the same species last week on which were 145 flowers.

The Michel Plant and Seed Company report heavy sales of the Mexican morning glory (Ipomœa palmata) of which they are sending out a handsome colored plate. This firm is propagating 10,000 dahlias, a large part of which are the three white varieties, Camelliaflora, Guiding Star and Princess Mathilde.

Mr. Joseph Cousens, late with Hugh Low & Co. of London, has been appointed superintendent of the Vanderventer Gardens, which are to be renovated.

St. Louis was visited by a heavy rain Monday, the 4th. More than three inches fell in a few hours. Many sewers were not able to carry off the water and cellars and basements were flooded. But the new system of drainage put in last year at the Mo. Botanical Garden did its work so effectually that the damage was not one tenth as great as was usually done by an ordinary heavy shower, before the walks and drains were reconstructed. Little or no damage was done to florists by the storm. Friday the north wind began to blow and during the night considerable ice was formed on standing water.

The florists who have stands at the Union Market report a good trade in potted plants. The cut flower trade has been fair to dull. All florists are looking for a brisk Easter trade. With the exception of lilies there will be stock enough to supply the demand. J. C. D.

SOME VERY fine blooms of the cornflower (centaurea) have been sent us by Mr. F. J. Wieners, president of the W. D. Allen Floral Co., Chicago, who states that they have been cutting from 50 to 100 blooms a day for the last two weeks.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a florist in a cut flower store. Good hand in making up designs. Best of references. Address H. OLSEN, 25 Fry Street, Chicago.

SITUATION WANTED—By a successful propagator and grower of roses for cut flowers and general stock. West or south. Best of references. Address X Z, care American Florist, Chicago.

SITUATION WANTED—By a first class competent single florist and gardener. Full particulars in answer must be given. Address W K, care Rud Krueger, 339 Poplar St., Philadelphia, Pa.

SITUATION WANTED—By a No. 1 grower of all kinds of greenhouse stuff, where order and system are appreciated. Only those with good houses need apply, who desire the services of a faithful employe. Good wages wanted. 22 years' experience. Address NELSON, 127 N. Clark street, Chicago.

SITUATION WANTED By a first-class florist; single; 8 years' experience in growing rose and general market stock—last three in one of the largest rose growing establishments in Boston. First-class references. Wages expected, $50 per month. JOHN PRITCHARD, care Wm. H. Elliott, Brighton, Mass.

WANTED—Good man to work in greenhouse and outdoors. Steady work to right party. Address G. HEINRICHS, Crete, Ill.

WANTED May 1st, experienced rose grower. Married man with small family preferred. Address M. care Welch Bros., 165 Tremont St., Boston.

WANTED—A practical florist looking for a good location for business, proof profits over $100 per month, home trade should address TWIN CITIES, care American Florist.

WANTED—Man with knowledge of foliage plants to work in palm houses on commercial place, $10 per week. Address JOHN BURTON, Chestnut Hill, Philadelphia.

WANTED—A strictly sober and reliable man; must be a good grower of cut flowers of all kinds; a good salesman, and fair knowledge of design work. Apply with references to R. care American Florist Chicago.

WANTED—Gardener and florist for private place. Must be competent to run greenhouse; wages $25 per month and board by the year. Would employ man and wife, if woman good cook and no children. L. O. SWOPE, Independence, Mo.

WANTED—Active man with capital to take part interest in rose, carnation and violet growing to sell at wholesale. Just about building new greenhouses for the business within street car connections on his own property. Address HORTUS, 31 Public Square, Room 7, Cleveland, O.

WANTED—A good reliable rose, carnation and violet grower in commercial place, to take charge of a range of new houses. None but a thoroughly competent and aggressive man of temperate habits need apply, and one who can furnish good recommendations. This will be a good and permanent place in a growing city and good climate. Give references and state where you have worked during the last 8 years. Address MERMET, care American Florist.

TO RENT—Greenhouses with one acre of land. For particulars apply to SARAH W. STORY, Brighton, Mass.

FOR SALE—At a bargain, a florist's business in a thriving city near St. Paul. Proof profits for 1891 over $1,300. For particulars address SELLER, care American Florist.

FOR SALE—Lot 70x170 feet, with 8 room house, plant of four greenhouses, with good spring stock, fine local trade. If combined with nursery a splendid opening. Less than 7 miles from heart of Chicago. Address Box 543, Austin, Ill.

FOR SALE OR RENT—Two greenhouses well stocked, one 18x75 and one 12x32, potting shed 18x18, six room dwelling, large barn, ¾ acres ground, on the main line P. R. R., 15 miles from Philadelphia. For further particulars apply to A M R, Devon, Chester Co., Pa.

PARTNER WANTED.

A practical man with $500 to pay for horse, wagon and other small expenses. My place contains over 9,000 square feet of glass which is now filled with roses, carnations, geraniums and other bedding plants. Being struck with paralysis last year is the only reason for taking a partner in my business. Address NEW JERSEY, care American Florist.

CLEMATIS FLAMULA.

Nice plants, 60 cents per dozen; $4 00 per hundred, prepaid by mail. Order quick.

JOSEPH BANCROFT,
Lock Box 24. Cedar Falls, Iowa.

The Seed Trade

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

MR. MAULE is refunding money on Freeman potatoes.

MR. J. E. NORTHRUP is making a trip through the Southwest.

MR. W. B. HAYT, with the Cleveland Seed Co., is making a western trip.

FIVE THOUSAND DOLLARS is considered a good day's receipts in Philadelphia.

MR. BLANC is already actively at work on engravings for the 1893 catalogues.

AMONG the extra scarce seeds are yellow onions of all kinds, sweet corn, cucumbers and beans.

MR. JOHN LEWIS CHILDS will be a delegate to the Minneapolis Republican Convention in June.

LARGEST HOUSES in the mail business report that as yet no week has equaled that of March 7.

SECRETARY DON reports favorable prospects for an interesting meeting of the Seed Trade Association at Wethersfield in June.

MESSRS. W. ATLEE BURPEE & CO. estimate the falling off of their business during the cold weather from March 10 to 25 at $15,000.

UNPRECEDENTEDLY warm weather beginning April 1 has increased the mail trade all over the country. Local business, counter trade, has also started in briskly.

WM. HENRY MAULE is making a northwestern trip, visiting Chicago, St. Paul and other cities. Mr. M. reports his seed trade as nearly over. He considers Prize Taker onion a leader.

MR. W. ATLEE BURPEE is to be married April 30 and will sail for Italy via Gibraltar from N. Y. May 9. He is the prince of good fellows and the good wishes of every one will go with him.

RICHMOND, INDIANA.

March Chrysanthemums.

In reference to an article in issue of March 24 headed "March Chrysanthemums," I would like to say a few words.

It is not so rare to see chrysanthemums flower during the winter and spring months, especially when kept in a temperate house (not lower than 50°), for stock. Plants grown in 5 or 6-inch pots, flowered in November and cut back, will flower again very freely in about two or three months, and if not fed well with liquid manure or repotted to give them a good start they will give you more flowers than cuttings.

When propagated by cuttings if the lower eyes are rubbed off you will get very few suckers and when the plant is cut back in the fall it will break along the old stem and the strongest shoots will give you flowers almost as fine as the first ones.

We had quite a number in 5-inch pots last fall and kept them in a temperature of about 50°, but did not need them for cuttings therefore did not bother much with them. Quite a number flowered in February and March while some are in bud now. Among them were Sugar Loaf, Frank Wilcox, James S. Lewis, Belle Paule, Mrs. T. H. Spaulding and Mrs. Senator Hearst. The flowers were not very large but of good shape and color. Cuttings were put in June last.

Mr. Newby's seedling "Alice Newby" may be the advance agent or forerunner of a new race of chrysanthemums, "The ever-flowering chrysanthemums," which I think we will have in time.

Now about the name. By all means do not change the name "chrysanthemum." Please let good enough alone.

Washington, D. C. P. G.

For Spring Potting.

The best time to pot off small Palms and Foliage Plants is NOW, and they will then be ready to fill houses with for summer, after bedding plants are cleared. Cheap plants as follows:

News Notes.

LAWRENCE, KAN.—No damage of any consequence to greenhouses here during the recent storm.

ATCHISON, KAN.— R. J. Groves lost about 300 lights of glass in the recent storm. No serious damage to other greenhouses is reported.

OSKALOOSA, IA.—The Kemble Floral Co. has commenced work on a new addition of about 10,000 feet of new glass. The glass will all be double thick.

BROOKLYN, N. Y.—Mr. M. T. Keenan, the Myrtle ave. florist, made a fine display of orchids and blooming plants at his "Easter Opening," last Monday, Tuesday and Wednesday.

COUNCIL BLUFFS, IA.—Mr. L. A. Casper has sold his florist business and greenhouse establishment to Mr. J. F. Wilcox, who will continue the business. The consideration was $32,000.

CONCORD, MASS.—Henry L. Shattuck, a prominent floriculturist of this town, died on April 4th. He has been for many years Superintendent of the famous Sleepy Hollow Cemetery where Emerson and other famous men of the old town lie buried.

BOONE, IA.—It was a high old wind but only slight damage was done though every minute we expected the whole outfit to go. Had quite a sharp hail for a short time. It was about the size of buckshot, but it struck the glass so slantingly that only weak panes were broken.

OMAHA, NEB.—The Omaha Florists' Club has been organized with officers as follows: L. A. Casper, president; A. B. Stewart, vice-president; A. Donaghue, Jr., secretary; W. H. Foster, treasurer; trustees, Alex Rose, J. Peterson, J. Hess. The club will give a chrysanthemum show next November.

DESMOINES, IA.—The recent storm did some damage by breaking glass and blowing off ventilators, but the weather was warm and no rain or hail came with the wind here. Probably $500 would cover all damage to greenhouses in this city. The storm of March 9 and 10 did quite as much damage, as some stuff was frozen in poorly heated houses.

KANSAS CITY, MO.—In the recent storm R. S. Brown & Sons suffered more loss than any other florist here. The wind blew several hundred lights of glass out of their houses and the top of one of their chimneys, 40 feet high, was blown over on to one of the houses, doing about $100 worth of damage. Probst Bros. lost about 200 lights of glass, Payne some, N. S. Griffith, of Independence, a few. J. P. Coen, of Lexington, lost some 500 lights by hail. It was the worst wind we have had in years. All the greenhouses lost more or less.

The Nursery Trade.

Trade Notes.

The warm weather the first week in April has made exciting times for nurserymen, causing every planter in the country to become almost distracted because everybody cannot be waited upon at once. Such spells occur every year, followed by snow storms or hard freezing, which gives anxiety of another nature.

I can remember many snow storms the first of May, also with very cold weather at Rochester, N. Y. In most cases the frost is seldom out of the ground the first week in April, as it is at present. The roads are settled, nursery stock is accumulating at the nursery grounds and the greater part of the packing will be done within the next few weeks.

People not acquainted with the nursery business will find it difficult in sympathizing with the nurserymen at this season of the year. He must stock up with everything to a considerable extent, and everything means a gathering in from almost every part of the world, therefore people who are wondering why the orders sent to the nursery have not been filled sooner should have compassion for the nurseryman.

The low price prevailing for fresh fruit for the past year is somewhat discouraging to planters, therefore there is likely to be a surplus of some kinds of stock. Orders for pears and plums are not so numerous as last year.

Nurserymen who have been employing agents are left with some surplus stock on hand, indicating that agents have not sold quite up to their former record.

There are few things more uncertain than the run of trade with the nurserymen. One year the run may be on Bartlett pear, Baldwin apple or Lombard plum; enough of these varieties can hardly be secured to fill orders. Next year the nurseryman stocks up heavily with these varieties and finds the orders have fallen away one-half, for reasons beyond his control, and he is left with a large surplus. The next year he is more cautious. This is the way the trade runs one year with another.

In some cases reasons may be assigned for this change of view and at other times it is unaccountable and yet, taking one season with another, the amount of nursery products sold will not vary much, what is lost in one item being made up in another.

Many nurserymen are laid away for the long sleep as the result of the strain put upon them at such seasons as this. It is a trying business, straining the toughest constitution, and yet there are very many pleasant things about it. On the whole it is a profitable pursuit. There is this satisfaction about it—whenever an honest nurseryman fills an order he knows he is doing the purchaser a good service. Money invested in nursery stock is well invested. CHAS. A. GREEN.

CINCINNATI.—The Fischer Nurseries, Walnut Hills, have been purchased by a syndicate for a consideration of $100,000, and the land will be sub-divided into building lots for residences.

SAN FRANCISCO.—Meserve & Son, the Pomona nurserymen, will attempt to obtain damages for the cargo of Tahiti orange trees burned by the Horticultural Commission.

LAST CALL.

In order to make short work of what stock of the following still remains on the place we make the following prices, good till **April 24;** if order is received after that date prices will be the same as in FLORIST of March 24, subject to being unsold:

	Per 100
Dracæna australis, 18 to 24 inches high	$18.00
" " 24 to 26 inches high	35.00
Dahlias, single roots	2.00
" clumps	6.00
Tuberous Begonias	5.00
Hibiscus Grandiflora, 2½ and 3-inch pots	4.00
English Ivy, 18 to 36 inches	5.00
Clematis, best varieties, 8-inch pots	40.00
Echeveria rosea, 2 to 4 inches diameter	3 00
Hydrangea Otaksa, 6 inch pots	15 00
" Thos. Hogg, 6-inch pots	15.00
Roses, mixed sorts, 3 to 5-inch pots	5.00
Cyclamen giganteum, 5-inch pots	12.00
Marguerites, large white, bushes 2½ to 3 feet high	12 00
Callas, 5-inch pots	12.00

For other stock not enumerated in the above list, also Rustic Vases, Iron Vases and Window Boxes, see FLORIST issue of March 24.

Special offer for Easter, see FLORIST issue March 31.

ADIANTUM CAPILLUS VENERIS—The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. If you are short of room now we will book your order and ship any time up to May 15th. **Price, strong plants, $8.00 per 100.**

For bargains in Plants, see issue of March 24.

J. Horace McFarland Co.,
HARRISBURG, PA.

The World's Fair.

Material is now beginning to arrive in quantity for the Horticultural Department.

Among recent arrivals were 100 varieties of herbaceous pæonies and a large lot of perennial phloxes from H. Cannell & Sons, Swanley, England; a box of chrysanthemums from Carter, London, England; 26 boxes of herbaceous plants, shrubs and vines from the Dingee & Conard Co., West Grove, Pa; 10 plants of double flowering crab from Mr. Bechtels, Staunton, Ill.

The rose garden on the wooded Island has been laid out and hardy roses already received are being planted.

A portion of the supplementary greenhouses are now occupied and the remainder will be ready for occupancy as soon as the heating apparatus is fully installed.

The Horticultural building is now fully enclosed and the work that remains to be done is progressing rapidly.

Germany has applied for an acre of space in the Nursery division.

LOUISVILLE, KY.—Business is dull and plenty of flowers going to waste. It was never so dull before. To relieve the monotony of the situation a number of the florists arranged for a little supper at which the project of a chrysanthemum show next November might be talked over. There were present Messrs. J. Schulz, A. Lauer, S. J. Thompson, [illegible] Schleeter, Joseph E. Marret, Henry [illegible] Chas. Neuner, Henry Lichtefeld, [illegible] Mann, E. G. Reimers, Will Hamilton and Wm. Walker. It was a very enjoyable affair and it was felt that considerable good had been accomplished. Acquaintance and friendship was cemented and all were in excellent humor when they separated at 11:30 p. m. to return to their homes.

ST. JOSEPH, MO.—The storm did very little damage to greenhouses in this city and vicinity. Probably $25 would cover all losses.

A TREATISE upon the American species of rumex occurring north of Mexico, by Prof. Wm. Trelease, has been issued by the Missouri Botanical Garden, St. Louis. It is illustrated by 21 splendidly executed plates.

THE Florida Horticultural Society will hold its next annual meeting at Ormond, May 3d, 4th and 5th.

WILSON BROS., florists at Springfield, Ohio, are reported burned out April 17.

Among the Rose Growers.

Morris county, New Jersey, is as famous for its roses as its peaches; it is a locality where few people can afford to throw stones. There are forty growers who ship from Madison alone, seven from adjacent Summit and six from Chatham, the next station. It is a district full of interest to any one connected with the trade.

During a recent trip to this locality the first visit was paid to the DeForrest establishment, which has obtained distinction chiefly in growing orchids for the cut flower trade. There are several houses of roses, among them some fine Rothschilds, but the orchids occupy more space than anything else. A visit to this place gives one some idea of the place the orchid now holds in the cut flower trade —but a few years ago we should have thought such a venture decidedly chimerical.

Cattleyas take the lead in quantity, but Trianæ, the variety most extensively grown, is now about over. Two months ago the display of bloom was very fine, a number of very good white varieties being among them.

A great many odontoglossums are grown here, their flowers being admirable for trade purposes. Among cypripediums a handsome form of C. Argus was noted in bloom.

Phalænopsis Stuartiana was noted, charming as usual, and calanthes and dendrobes were still in flower, though limited in quantity.

All the orchids grown here being primarily for the flowers, beauty is the first consideration, a fact which adds much to the attractiveness of the place.

Next to the orchids may be mentioned the cyclamens; a very good strain of this popular plant is grown here. Among them were some extraordinary double flowers, in which a second corolla grew downwards from the first. It was a decided oddity, but really ugly; the graceful form of the flower was entirely lost.

A quantity of well grown adiantum was well worth looking at, especially as trade ferns are now so scarce; among them was an unknown seedling, having larger fronds than cuneatum, which gave an impression of great durability. A. Farleyense and A. decorum were among other varieties grown.

Mr. May is, without doubt, the most famous of the Morris county rose growers, and one may generally be sure of something new or unusual at his place. At present his novelty is a rose, as yet unnamed—a seedling. It is a hybrid tea, with large flower, full petalled and yet long in the bud. It has a delicious tea odor and is satiny pink in color. The color is bright, and yet delicate, and is equally removed from the yellow pink of Mermet and the blue pink of La France. It is very hard, by the way, to describe the tint of a pink rose—there are so many different colors which we can only describe as pink, while feeling that the term is inadequate. However, this nameless rose is a real pink, and a charming color; it appears to last well, is strong in growth and free in flowering—in fact, it appears to be a genuine acquisition.

Mr. May is especially identified with teas or hybrid teas, growing but few of the other sorts. The Bride always does its best with him, and Watteville is another of his unvarying successes. This season the Cusins have been sorely tried by those abominable eel-worms. This pest is invisible to the naked eye and indistinguishable under a glass magnifying thirty diameters, but with the microscope the creatures show an amazing activity. It is remarkable that such a tiny creature can cause such havoc, but a cursory glance at the affected plants shows that the mischief is serious.

The Waban attracted by its good color, but this rose has been quite a disappointment. During the past season there has been a general complaint of the number of malformed flowers produced; this, however, may have been produced by a temporary weakness of constitution rather than being characteristic of the plant. This same defect has been noted in so many new roses for a season or two, giving rise to the impression that it is often caused by over-propagation.

The greatest defect in the Waban seems the awkward shape of the flower, caused by the rolling of the outer petals while the heart is still tightly closed; the color is certainly attractive.

Speaking of the Wootton, Mr. May gave his opinion that it is most useful to small growers whose flowers are for their own use; they can usually have a supply of Wootton when they can get no other red rose.

One does not look for much besides roses at this place, but a few other things are grown simply for the pleasure they give, among them being a little house of carnations. Among them was a most charming pink, Grace Battles, which promises to be a decided rival to the popular Wilder.

Another place visited was that of James Littlejohn, one of the pioneers of the trade in growing hybrids. He used to be famous for his Cornelia Cooks, but this rose is now rather out of date, and Mr. Littlejohn has transferred his skill to the Bride, which he grows to perfection. Mr. Littlejohn is perhaps almost the only man around New York who grows Her Majesty, though in small quantity. We all devoutly believe that this rose is a wonder when it comes right, but it generally doesn't.

The Sunnywoods greenhouses at Chatham were an object of especial interest on

this trip, being the home of the Bridesmaid. This rose was first introduced as The Hugh, but this name did not seem to exactly fit, so it was changed to Bridesmaid, an extremely felicitous title, firstly, because it falls trippingly off the tongue, and secondly, because it will naturally be associated with the popular Bride.

There is little reason to refer to the origin of the Bridesmaid, it is well known as a Mermet sport, but without seeing the plant it is difficult to understand how thoroughly distinct it is. It is undoubtedly associated with Waban, whereas the difference is as strongly marked in shape as in color. At Sunnywoods these two roses are planted side by side, thus enabling one to note the difference at once.

The color of Bridesmaid is clear light pink, it is not the red of the Waban, but is equally removed from the shell pink of Mermet, whose yellowish tinge always becomes more marked in bad weather. Bridesmaid pales but little in dull weather, but when it does it still remains pink, a decided advantage over Mermet. The flower is very large and shapely, habit strong, like all the roses of this strain. So far it has proved itself singularly free from deformed flowers. Certainly a most beautiful rose—by another season we may expect to see it as one of the stars.

Another specialty at Sunnywoods is the Cusin, with which Mr. Moore is especially successful, and the same may be said of the Watteville. Both these roses are very finely grown, having secured a number of prizes for Mr. Moore.

EMILY LOUISE TAPLIN.

Growing Dutch Bulbs in America.

BY E. BUETTNER.

[*Read before the Chicago Florist Club April 14.*]

I have chosen for the subject of this essay the growing of Dutch bulbs for the trade in this country. When Mr. Geo. Klehm some years ago commenced the growing of tulips for his own use, I paid some attention to this matter and have since tried some myself, enough to convince me that we can grow as good a tulip bulb in this country as in Holland if the right kind of soil is selected and a similar manner of culture is carried on. It is a mistake to think that Holland is the only country where these bulbs can be grown profitably. The reason that Holland is the only place where these bulbs are cultivated to any extent is, I think, only an accident. In the middle of the 17th century tulips became an object of speculation in Haarlem and enormous prices were paid for rare varieties, as much as 3,000 to 5,000 Gulden apiece. This naturally gave an impetus to their cultivation and everybody for a time went into the business of cultivating and improving the tulip. After the speculation fad collapsed they were so well posted and possessed so many advantages in growing these bulbs and raising new varieties that the whole of the trade was left to them, and for over 100 years they have enjoyed a monopoly of the bulb trade.

America is taking the lead in most branches of our trade and I see no reason why it should not also in this. Only a few years ago we were importing all our palms from Europe and it was thought impossible to grow them as good for the same price in this country. To-day we can buy better plants for less money here, without running the risk of having them spoiled in transit. I am sure there can be found in this country soil and conditions of climate suitable to establish an American Haarlem, and I think right here around our lake such a place could easily be found. As tulips can be grown as easily as onions it is sure to be profitable and every florist in the land would be a gainer.

I am of the opinion that the soil and climate of Haarlem is not the reason for their being cultivated there almost exclusively. As I stated before it is a matter of an old, well established business in which the inhabitants of a whole section of country are partners. For generations bulbs have been grown here for the trade and every man, woman and child is thoroughly acqnainted with the trade; besides all the hundreds of different varieties of tulips, hyacinths and so forth can be had here every year at a moderate price. It is therefore quite unnecessary as well as impossible for other European countries to try and better these conditions. But we, here in America, have other reasons to wish to be able to obtain stock nearer home.

I have been told that in Europe it is not very difficult to force tulips and hyacinths into good blooms, on long stems, with good foliage, any time in December and earlier, while we in America experience great difficulty in getting fair blooms even for Christmas. The reason for this I think is that the European florists receive their bulbs from five to six weeks earlier than we do, and can have them rooted earlier, and consequently force them earlier and better. This could be overcome if we could obtain our supply at home. The bulbs would ripen in this country at least four weeks earlier than in Haarlem, and we would thereby gain over two months. We would be able to shift our forcing season to a period when flowers are scarce and needed, while now the main crop of bulbous stuff comes in Lent when there is a glut of all kinds of flowers and no sale. Therefore, in the present state of affairs there is little or no money in forcing bulbs.

Another argument is that we often receive bulbs in spoiled condition, from being heated, the result of stowing them in the hot and airtight hold of the steamer and after taken out exposed to the hot and dry air of our climate. We received this year a shipment of about 15,000 tulips that were entirely spoiled, the flowers all being dry in the bulbs, and we have no year been without some loss. All this could be avoided if the bulbs were grown here.

Last summer while in Europe I took a trip over to Haarlem, and I will relate to you in a few words what little I have seen. There is a dummy road running from Haarlem to Leiden, right to the main bulb growing district. The country is flat and below the level of the sea. It is crossed by numerous canals and ditches, which act as drains to carry the water to main canals which are about 6 to 10 feet higher. Hundreds of windmills pump the water from the lower ditches into the higher canals and is so carried off to the sea. The soil is mostly pure sand, but careful cultivation has made it very productive. The bulb fields are divided into small squares the size of ¼ of an acre to an acre, surrounded by live hedges to protect the plants from the winds that are constantly blowing here from the sea.

The tulips are multiplied by offsets, planted from September to December, in beds about four feet wide. The soil is taken entirely out of the beds to the depth of 4 to 5 inches. The sets are then placed in the bed and soil from the next bed is taken to cover them, and so on through the whole field. The bulbs are allowed to flower, to assure that all are true, then the flower is cut out so that all the strength goes to the bulb. They are taken up in July or August and stored on shelves, in long sheds to dry; care is taken not to expose them to the sun as it will crack the skin and wilt them.

Narcissus are handled the same as tulips, but hyacinths are multiplied in a somewhat different way. A conical piece is cut out of the base of the mother bulb. Then they are laid out on shelves, the cut to the top. Here they remain for six to eight weeks or longer and little bulblets form on the base of the leaflets. The bulb is then planted out whole. The next season these little bulblets will be grown to the size of peas. They are then taken from the mother bulbs and planted alone and in five or six years they will grow to salable bulbs, taken up and replanted every season. They are of course also multiplied by offsets, but as the hyacinth does not form many, the former way is mostly applied with newer and scarcer varieties.

Now, where ever there is well cultivated light sandy soil, well drained, similar to what we find in Lake View, not too dry in summer or too wet in winter, would be suitable for the cultivation of these bulbs. They will also grow well in heavier soil, but will split and lose their skin and therefore not be salable. If a beginner having the right kind of soil and other conditions favorable would confine himself to two or four varieties and grow them in large quantities, I am sure he would find himself in possession of quite a snap. I think about a hundred thousand bulbs could be grown on an acre. The cost of cultivation would amount to about $250 at the most. The bulbs, of such varieties as Yellow Prince, would bring at least $1,500, making a net gain of $1,250 from one acre. But after being well established the cost of cultivation could be lowered and the production increased. Where is there a more profitable business?

But this, like all other kinds of business, requires close attention and should not be taken up except it can be done well, otherwise failure is sure.

Our Foreman.

The engraving is one used in a recent circular by Messrs. C. B. Whitnall & Co., of Milwaukee, but the subject was such a pleasing one that we felt it was entitled to a wider circulation and should be enjoyed by all the readers of the FLORIST.

The child is the infant son of the senior member of the firm and the title is the same as that used in the circular. Going as it did to the retail trade we believe this engraving must have greatly enhanced the value of the circular as an advertisement, for who would not be at once attracted by the pretty combination of the child and the handsome foliage (especially the ladies); and then heartily enjoy the title that appears below.

The Easter Display in New York.

This has been an Easter of pot plants. Cut flowers were used, as they always are, but they were nowhere, compared with the plants. Every flower store was brimming over with plants, and the sales were very large, while the peddlers and market dealers reaped a large harvest among patrons who rarely enter a florist's store. The quantity of plants and flowers seen about the city shows that popular taste in this line continues to increase. Confectioners, milliners, haberdashers and dealers in bric-a-brac decorated their windows with lilies or hy-

"OUR FOREMAN."

drangeas, chiefly lilies, which are not only the most popular of all Easter flowers, but this year at least one of the most plentiful. Two large china dealers had their windows decorated with lilies put in large trumpet-shaped vases of sea-green glass, the very thing to hold big long-stemmed flowers. The same dealers offered exquisite fern baskets of Limoges china, filled with growing ferns.

The display made by the retailers was very large, showing the prevailing tendency towards plants. Many of them found their business too large for their everyday store, and so overflowed into an annex.

Fleischman was one of the busiest florists on Broadway; in addition to his main store he annexed three others, and found trade in plenty for each. The main store, though small, is one of the prettiest in the city, being decorated in Empire style with white and gold and lit by a tremendous number of electric lights. At night the effect is extremely striking and always proves a great attraction. The outside display was chiefly lilies and hydrangeas; the windows were massed with fine azaleas. On entering the store attention was seized by a broad frieze of Marguerites and red azaleas at the rear; Marguerites and genista were banked in the corners. Mr. Fleischman was doing a very large business; he stated that the favorite Easter gift this year was an azalea, the pot slipped into an ornamental basket. Mr. Fleischman was formerly with Klunder. He says they use a good deal of narrow ribbon in their work, but the broad sashes are less cared for, it being the opinion of many in the trade that they detract from the effect of good flowers.

Hafner had a window filled with beautiful azaleas, bordered with genista and adiantums. Lilies showed in the background with excellent effect.

Bebus had a showy hydrangea as a centerpiece, surrounded by roses and bordered with ferns. Lilies too, but this goes without saying.

Brower's window looked like a spring day, full of roses, daffodils and lily of the valley, while at one side was the daintiest border of trailing arbutus ever seen. It is only a bit of a woodland flower, but it often rouses more enthusiasm than the costliest rarity.

Kirch had a window full of roses and lilies, bordered by daffodils and lily of the valley.

Scallen had a whole flower show out of doors; any quantity of fine genistas, azaleas and hydrangeas, as well as lilies. The windows were chiefly decorated with cut flowers, but plants were the main attraction, as was readily seen by the quantity sold.

Thorley had his usual large display, his ample window space gives scope for fine effect. The main window had a broad white satin sash at the ceiling, the long ends winding irregularly through the bank of flowers. This window was filled with spring plants—dainty baskets filled with hyacinths, tulips or lily of the valley—tall white lilies in baskets bound with lavender ribbon, azaleas and lilac. The arrangement was most charming. Another window was filled with choice roses, but the spring plants were the great attraction. In the store a bank of lilies stood along the walls, and the corners were loaded with violets and roses.

Hanft Bros. had their front almost hidden by the mass of lilies and Marguerites, which predominated outside. They had a very large and tastefully arranged display with a backing of palms, which threw out the colors of the flowering plants. Bulbs in pots were plentiful, and so were azaleas. In fact the display of azaleas made by the trade generally was of remarkable excellence, the plants being very well flowered and above the average in shape and foliage.

Jas. A. Hammond is another of the Fifth avenue florists who made a fine display, trade being, as with the majority, very largely in the line of pot plants. Genista, hydrangea and lilies formed a fine show, good lilacs were plentiful, while a charming novelty was Kalmia latifolia, previously mentioned in the FLORIST. The kalmia was flowered to perfection and made a very handsome plant. White double stocks were another of Mr. Hammond's attractions; they were well grown and seasonable. Marguerites, always popular, were abundant, and there were also some good carnations. The store was well filled with roses and other flowers and trade very brisk.

Siebrecht & Wadley decorated their corner with their usual taste; flowers everywhere, outside and in. Two shapely bay trees stood outside, surrounded by big hydrangeas. All sorts of bulbs were to be seen in pots, and there was a large display of Marguerites, lilac and azaleas. Stocks and pansies were plentiful. It is noticeable that palms make very little show in these Easter displays, and both cinerarias and calceolarias, which are usually popular, were conspicuous by their absence. It may be supposed that these plants found their sale more in the

markets than with the uptown retailers. The display of hydrangeas seen at Siebrecht & Wadley's was the finest noted anywhere, both in quantity and quality. All Otaksa, pink and blue, about evenly divided. The prevailing taste for pot plants was seen here, trade being very large. Azaleas or lilac, the pot slipped into a basket cover, formed a favorite gift, white and gold baskets leading. Some very attractive baskets filled with hyacinths were square in shape, made of woven gilt straw and ribbon-like white celluloid; they were very handsome. Plants were used in all sorts of decorations, while the preceding Sunday was conspicuous for the increase in the use of palms. Some giant mignonette seen at Siebrecht & Wadley's was rather an oddity, it was grown by Asmus and was so immense that it looked more like an extraordinarily colored cockscomb than anything else.

C. W. Matheson found his business so increased that it overflowed into an adjoining store, which was filled with flowering plants. Quantities of lilies formed the main outside display; the window was decorated with orchids. Very few orchids were seen anywhere, having for once to bow before simpler flowers.

Alex McConnell made a great display of lilies and hydrangeas, most effectively arranged. There were plenty of fine plants to choose from and trade was good. Some of the lilies were displayed in fancy pots, further decorated by narrow white ribbons, but the tendency is more in the line of plants unadorned.

Hodgson had some big genistas outside large enough to make respectable trees and a sheet of golden bloom. Around them were big hydrangeas and deutzias. Comparatively little deutzia was seen anywhere; it seems to be gradually falling into disuse in spite of its beauty. However, it does not stand much knocking around without injury, a serious defect in a trade plant. Quite a lot of astilbe was seen, though we are told it is losing favor. In addition to his outside show Hodgson had his usual well filled store supplemented by seasonable attractions in the way of spring flowers.

Nugent is known for his fine roses and violets, and a window filled with these flowers was very attractive. Another window, devoted to Easter stuff, had a fancy wheelbarrow of basket-work loaded with azalea and genista, backed by lilies; it was a quaint and pretty idea.

Dards had some very large genistas outside, towering above the other plants; they were very handsome, and there were fine hydrangeas and azaleas. It made a noticeable display.

Hauser & Son confined their display to the inside of the store; it was chiefly confined to choice cut flowers, among them very fine roses.

Stumpf had his store in gala dress, it being very tastefully arranged. One window was filled with a superb red azalea bordered with ferns and cypripediums.

McConnell & Grimshaw were finely decorated with cut flowers as well as plants, and were generally busy, as every good florist wishes to be.

S. J. Burnham had an attractive place, making a very fine display. At all these up-town places one is sure of seeing the best flowers in the market, as their class of trade calls for no other grade.

F. Ritter, Alphonse & Co., and many others, too numerous to mention, brightened up the streets with large displays. There is an amazing list of retailers in New York, and the trade seems to grow steadily.

Summing up the retail trade for this Easter, it may be regarded as extremely good, but most encouraging to plant growers. Flowers sold well and in quantity, but there was no remarkable increase in prevailing prices. Next to the lily, azaleas may be regarded as first favorite. As a whole, the Easter stuff was extremely good in every way.

Angræcum Sesquipedale.

The accompanying illustration is engraved from a photograph sent us by Mr. George Savage, who has charge of Mr. Kimball's splendid collection of orchids at Rochester. The plant figured is considered the finest specimen in cultivation.

Mr. Savage writes as follows: "This angræcum is described in Williams' orchid manual as a wonderful plant from Madagascar, where it is found growing on trees. Foliage dark green, about 10 inches long, blooms ivory white and very large, with a tail or spur hanging from the bottom of the flower, from 12 to 18 inches in length.

"The plant photographed originally belonged to Mrs. Mary J. Morgan, of New York, and was sold after her death with the entire collection at public auction about seven years ago, and was bought by Mr. Kimball at that time. This specimen stands about five feet high, but has never flowered so profusely as it did this last winter.

"This species requires a warm temperature, slightly shaded in the summer, with a moderate amount of water at the roots all the year round."

Cattleya Mossiæ at Washington.

The warm and genial weather has brought this cattleya very rapidly into bloom. Mr. Pfister, the gardener at the White House, has some 400 flowers in fine condition, hardly two alike, the lips in several instances being devoid of the rich coloring which usually predominates. Altogether it is a fine strain and coming so early, in that section of the country, Mr. Pfister finds ample use for the flowers.

The plants were formerly attached to blocks but baskets are now being used, which are much preferable as they do not dry out so rapidly during the summer months, a season when the plants are in active growth and require an abundance of moisture at the roots.

Two grand plants of Cyrtopodium punctatum were flowering, with long, many-branched stems covered with bright yellow and rich chestnut brown flowers.

Cattleya Trianæ were seen in quantity, and several C. Gaskelliana, also the pretty Lælia crispa, together with several very interesting cypripedes. A. DIMMOCK.

Portia Carnation.

Replying to L. T.'s request about treating Portia carnations, we have a bench 6 feet wide and 50 feet long, in a 11-foot house, paths at sides of house. We are cutting at present 800 flowers per week. To-day's cut of 300 flowers measure as follows: Diameter smallest bloom, 1¾ inches; diameter largest bloom, 2½ inches; average diameter bloom, 2 inches; length shortest stem, 12 inches; length longest stem, 20 inches; length average stem, 14 inches; and stems are firm and hold the flower erect above bench. Commenced flowering in October last, have bloomed continually since, and flowers have averaged as to size at least as good as above. The bed is a mass of buds and evidently will bloom till July; and there are no signs of decrease in size of flowers, length or stiffness of stems.

Treatment: Night temperature 50°, day temperature 50° on dark days, 60° to 75° on sunny days, with an abundance of air. Watering: The ground is kept moderately moist while the plants and foliage are kept dry, save on very bright days when we syringe with a mixture of ammonia and carb. of copper made as follows: 2 ounces of carb. copper dissolved in one quart of ammonia; dilute with 25 gallons of water. This syringing seems to *prevent* spot, carnation rust, greenfly and red spider.

To keep the flowers *large* nip off all lateral buds and allow only terminal buds to bloom. In cutting flowers take off the stem just above the uppermost pip that you would naturally select to root for a fine cutting. We do not attempt to grow a bloom from a side bud, or weak pip, as it will usually come very small. Good plants of Portia give 20 to 30 long stemmed flowers under this treatment during the season, and the flowers sell at double the price of the small weak stemmed lateral blooms.

We nip out the terminal bud of Fred Creighton and thin out the lateral buds, leaving 3 to 7 buds on each main stem. This gives nice medium sized blooms that do not burst. This is our most profitable pink carnation, producing 5 blooms where Grace Wilder gives one. It is always even in color, delightfully fragrant and sells at sight.

Lamborn, our best white, is disbudded same as Portia, save we leave the lowest lateral bud to bloom. Stems average 10 to 12 inches, and flowers run from 2½ to 3 inches in diameter.

Rosalind is disbudded, terminal is left and 2 to 3 lowest side buds are also allowed to bloom, nipping out the 3 topmost laterals. This gives an average 10-inch stem and a 2 to 3 inch flower.

This treatment reduces the number of blooms somewhat, but the better quality compensates to a great degree and our commission man has never reported anything unsold. As our carnations are grown principally for cuttings we keep the temperature very low, up to April 1st 45° to 50° at night and 50° to 55° during the day, with abundant ventilation. After April 1st, as we take no more cuttings, temperature is raised to 50° to 60° at night and 65° to 75° during the day, in order to produce the largest possible crop of flowers. C. W. WARD.

East Moriches, N. Y., April 11.

New York.

"The best Easter we ever had." Everybody don't say so but it would not be regular if every body agreed, and the general testimony is sufficient. It has been essentially a "plant Easter." The quantity of plants disposed of in this market is beyond precedent. And the quality has never been equalled before. Most of the large retailers have had extra space for their plant trade in the way of available vacant stores in their neighborhood and all made a big success of it. Scallen had two large flats over his store, Butler had an extra store on 5th avenue, Mathieson had two extra stores, Hodgson had his big hall filled up, and Fleishman had three stores and an interminable length of sidewalk devoted to the plant trade, and on Saturday it was almost impossible to move about in any of them.

Good Friday was a novelty for this latitude. A big snow storm in the morning hours, which in the neighboring New Jersey suburbs amounted to a coating of white four inches deep, was a convincing

ANGRÆCUM SESQUIPEDALE.

proof of the fickleness of April weather. Last week a July temperature, this week winter again.

This sudden change had its good effect on the flower market, nevertheless, and shortened up the supply of roses, etc., to such an extent that prices held right up to the top notch for first-class goods, and was a blessing to the shippers of cut flowers, who say that such a shipping trade for Easter was never before experienced and, better than all, up to date no complaints have been received.

Prices have held very stiff on good quality flowers. The best Magnas, American Beauties and Rothschilds have sold at from $40 to $60 per hundred. Mermets and Brides from $10 to $12 per hundred, prices unprecedented for April. J. H. Taylor cut 900 first class Magnas in one day, Asmus sent in 1000 Brunners in one day, and Blauvelt, of Pearl River, astonished everybody with the best Luizets seen in New York this season. Wiegand of course was the "king pin" on Jacqs, and his crop was just in the prime of quality and quantity.

As to lilies, it is hard to tell the story. There were some lilies lost, but they were not good ones. Many were sold as low as $5 per hundred, but they were as a rule not worth any more. Good Harrisii brought from $8 to $10 per hundred, and longiflorum $12 per hundred. On Friday, and even as late as Saturday morning, it looked as if the lilies would be dead stock, but by Saturday evening they were cleaned out and there was an unsatisfied demand on Sunday morning which was a surprise to everybody.

Candidums are practically out of the question as an Easter factor; callas, held up well, bringing $2 per dozen readily. In bulbous stock the worst overstock was on tulips, and some lots were sold at less than the original cost of the bulbs. Lily of the valley sold well and large quantities of it disappeared. First class daffodils sold quickly for $4 per hundred, but there was a big heap of outdoor grown daffodils from the South which was the worst kind of trash and which could not even be handled by the "Greeks," who usually stop at nothing if it is only "scheap." Carnations are generally off crop, and they held high, from $3 to $4 per hundred being the ruling figure. The only unsalable stock in the rose line was La France, which after a couple of handlings at this season of the year is only fit for the rubbish box.

Violets came in on Saturday morning in unprecedented quantity, so much so that they were rushed off at panic prices, a proceeding which was regretted before nightfall when the demand for them could not be supplied. Up to within a couple of days before Easter it was impossible to obtain smilax at any price. Then all of a sudden it came piling in from every quarter, and as it was unexpected no market was prepared for it, and as considerable of it was not over a couple of feet in length nobody wanted to pay 25 cents a string for it, so now it lies in "innocuous desuetude" in the commission men's cellars slowly but surely turning a golden yellow; another lesson to greedy growers to emphasize the old proverb that "all is not gold that glitters."

Among the novelties that seemed to "take" were Sweat Peas, and Burns & Raynor had a fine stock of Bougainvillea that came just in the nick of time from an out of town grower. Young Bros. look as if they had not had an opportunity to sleep for three days, and James Hart says quietly but convincingly: "The best shipping trade I ever saw."

The regular meeting of the Florists' Club took place on April 11, at Germania Hall. This meeting, as well as that of the bowling club, which preceded it, was but thinly attended, most of the members being evidently intent upon their Easter preparations. The part to be taken by the club in the coming fair in aid of the Actors' Fund was the prominent subject under discussion, it being the unanimous opinion that the flower trade is under no small obligations to the theatrical element and that the appreciation of this fact should be shown in no mean way by the Florists' Club. Henry A. Siebrecht reported for the committee having the matter in charge and diagrams showing the floral booth which it is proposed shall be decorated and furnished by the club were shown and commented upon. The president was instructed to increase the number of this committee to 25, and all members of the club will be asked to aid and assist by all the means in their power the club in its efforts to show the good feeling of the flower trade towards the charitable purposes of the Actors' Fund Fair.

A vote of thanks was tendered the American Florist Co. for a copy of the new florists' directory.

Two new members were admitted and several more proposed.

President Dean was absent and Theo. Roehrs presided, a fact which gave Alex Burns a glorious opportunity to keep Mr. Theodore up to the chalk line on parliamentary points, in retaliation for similar kind attentions by Mr. Theodore on former occasions when Bro. Burns occupied the chair.

Among the celebrities present was Mr. Robt. C. Patterson, of Pittsburg, Pa., who was so much pleased with the welcome extended to him that he had his name proposed for permanent membership.

Rudolph Asmus showed some spikes of mignonette which were about three feet long and flattened out several inches

across in the form of a "cockscomb" which excited some curiosity and considerable witty criticism of the grower.

The investigation into the methods and management of the park department has resulted in the resignation of Mr. Woolson.

John Weir has removed his Brooklyn store to corner of Fulton and Pierpont and when fully completed it will be the finest store in Brooklyn.

The greenhouse on the premises of P. H. Scudder at Glen Head was wrecked on April 12 by the explosion of a boiler.

Philadelphia.

Easter 1892 has passed and will long be remembered by the florists of this city as one of the busiest of these busy times.

Trade was good all through the week, except possibly Wednesday afternoon and Thursday morning, the wet weather keeping the people indoors on these days. It commenced to rain Wednesday afternoon, continuing until Thursday morning, when it turned to snow and soon the streets were very sloppy. But it cleared off about noon and the stores were soon full of customers. A storekeeper was grumbling about the weather and his hard luck in having a large stock, and if the bad weather continued a poor prospect of selling them, when Robt. Craig said that instead of a detriment the bad weather would be a benefit to him, as everybody who came to the store would mean business and he would not be bothered answering a lot of questions and giving prices to satisfy peoples' curiosity. Great head!

Of course the lily was the popular flower; unfortunately the supply was not equal to the demand, the stocks everywhere being entirely sold out by Saturday night. There may have been a few too many hydrangeas or spirea about, as almost all the stores seem to have a few of these plants left, but no doubt they would have gone if the people could have been waited on; this, however, seems impossible, particularly on Saturday. When the great rush comes it seems to carry almost any system before it and break it down. Pennock Bros. said: We could not wait on the people. We never saw such a jam. Had to stop selling cut flowers early in the day, and this was the case generally all about town, people going from one store to another only to get the same reply, "have not enough for our orders."

Lily plants were sold out early Saturday afternoon, as also were the cut blooms. The retail price was the same all over—25 cents a flower and bud.

Roses were very scarce, Brides particularly so, it being impossible to get them except in small lots. Mermets, Brides, La France and Albany sold for 12, Perles and Gontiers 8, Brunners 40, Laings 30, carnations $3 and in great demand. Lilies in pots brought 10 to 12, and some extra fine plants 15 a flower and bud; cut 10 to 12, valley 3 to 4, tulips and daffodils 4 to 5.

Mr. Charles Fox had a beautiful exhibition of his Easter stuff Tuesday, Wednesday and Thursday. The plants were tastefully arranged and massed in colors, a bank of lilies at the end of one of his houses rising to the roof being particularly fine and calling out an exclamation of surprise from all who saw it. A long house connecting others was massed with plants in full flower, while in the end of each house opening off of it was arranged a striking feature. In one was a hut thatched with straw in which were two sheep, while outside in the yard adjoining it was a hen and brood of chickens, also a pen with rabbits. In another house was a representation of a tomb carved out of rocks. This was much admired. In the office and store there was an exhibition of cut roses and orchids. The show was well worth a visit.

Habermehl Bros., of 22nd and Diamond, had also a fine exhibition. One of their features was a grotto with a lake in the center in which were different colored electric lights; about among the rocks were orchids in flower. The effect was very pretty. In another house or extension for the purpose, was a large bed of maidenhair around which were arranged large groups of azaleas, roses, daisies and Easter lilies in solid colors; in the center reclined a large cross of Easter lilies, candidums and lilies of the valley. This decoration attracted a great deal of attention; in fact their whole place was beautifully arranged and their plants showed the effects of good treatment by their fine healthy appearance and abundant flowers.

These flower shows must be greatly appreciated judging by the crowds that are drawn to them.

Trade prospects are very good, for a time at least, as quite a number of weddings are announced, at some of which there are to be quite extensive decorations.

K.

Mr. C. J. Pennock was in the city Friday. He brought with him some of his this years' seedling carnations—that is to say, flowers from his seedlings which are blooming for the first time. Progress is apparent in most of them. One was a very large flower, very full to the center, yet there was no indication of the splitting of the calyx. The calyx was shorter than is usually seen in carnations. In color it was white marked with pink, similar to the markings on Hinsdale. There was not, however, so much color in this one as is seen in the old variety when well grown nor is it the same shade of color, being more inclined to red than purple.

EXHIBITION ECHOES.

It should be mentioned in justice to Secretary Farson that he had written and sent schedules to all carnation growers that he knew, and Mr. Fred Dorner was one of them, so that the report which stated that Mr. Dorner would have competed for the cup with some of his seedlings had he known in time, needs correction.

The dinner table decorations were deserving of more notice than they received, but I did not have an opportunity of examining them until the flowers had commenced to wilt. Orchids, which were used liberally in both Messrs. Pennock's and Kift's designs, stand longer than any other flower that was used. I heard one florist remark that they last in good condition a little too long. Messrs. Kift & Son used with excellent effect tiny electric lamps in their display, which elicited many complimentary remarks on the ingenuity and taste of Robert Kift, who is the active partner in that firm.

The receipts were between $300 and $400 more than was taken in at the spring show of 1891. Mr. George C. Watson, who is chairman of the publication committee, had the advertising in charge, and it certainly was better done than has ever been attempted at any spring show before. The cuts which were used were made by A. Blanc and were original and beautiful, and they might well be initiated by other clubs or societies which have spring shows on hand.

L.

Boston.

Another profitable and generally satisfactory Easter. The weather was responsible for considerable hesitancy and cautiousness in the early part of the week and the wholesale dealers found local dealers disinclined to take any chances by buying liberally in advance. The weather was very cold and March-like and the reports of blizzards and severe weather generally from the west gave cause for fear that the storm might give us a parting call before proceeding to sea, and thus knock all Easter calculations to pieces. The cold weather was a great boon to the wholesale shippers, however. Rare indeed is it to get an Easter so late in the season, when lilies and roses can be shipped any distance without melting, and the wholesalers had good cause for glee for everything was in their favor. Good Friday was a cold, cheerless sort of day and it was not until Saturday morning dawned bright and spring-like that the retailers managed to don a hopeful smile. The week had started off with a knock-down blow administered by Jordan, Marsh & Co. in the shape of a big advertisement announcing that they would place on sale at 10 cents apiece 5000 Easter lilies such as florists generally sell at from 25 to 45 cents each. The atmosphere in the neighborhood of one or two of the larger florist stores was blue with profanity about that time, but the clouds cleared away and wrath gave way to smiles when it transpired that the wonderful ten cent lilies were only imported Bermuda trash, and of such a quality that no self-respecting street fakir would adorn his stand with them. One witty gardener called at Jordan & Marsh's and asked what they would charge him for a cord of the lilies to chop up and grow mushrooms on. One conclusion has been arrived at, that is, that if Jordan, Marsh & Co.'s ordinary run of bargain advertisements compare in veracity with their lily adventure, the florists will not carry much of their cash to that concern.

The great surprise to even the most sanguine was the enormous proportions of the plant trade which reached a point never approached here before and would have been considered two or three years ago an impossibility. Wm. Edgar, one of the largest lily growers here hired a large vacant store on Tremont street for the week and load after load of longiflorums and hydrangeas disappeared like magic, the rush increasing steadily until on Saturday afternoon it looked like a mob, and they cleaned everything out and it was a wonder they didn't gobble up Edgar himself in their eagerness. Norton Bros. also ran an extra store where they had a beautiful selection of plants, among which were some splendid clumps of red paonies. Colored plants did not sell nearly as well as white ones, however. The absence of genistas was very noticeable, and the azaleas were neither plenty nor good.

Hydrangeas were much more abundant and of better quality than ever before. They formed the main portion of the stock sold at auction by Edward Hatch. The sale lasted three days and went from poor prices on the first day to very fair ones on the last.

One fact which was demonstrated to the satisfaction of everybody was the great inferiority of the Harrisii to the longiflorum as an Easter lily. The Harrisii has its place as an early winter forcing lily, but the flimsiness of its blossoms results in no end of annoyance and no

small loss to everybody who touches it at Easter, especially when Easter comes late. The great bulk of the candidums in the market were very poor.

There was one strain of good ones round however which was the more noticeable on account of the absence of any other good ones to keep it company. They say that the young man who sold the bulbs will have a picnic on candidum orders when he comes here this season. And they say further that he is a former Bostonian who now makes the City of Brotherly Love his headquarters.

Window decorations in stores of all descriptions in the retail district were very general, many beautiful effects being formed by the use of lilies, hydrangeas, spireas, etc., combined with rich silk hangings.

With one exception the florists made no attempt at design in their window decorations, being content with massing great banks of blooming plants in the windows and about the doors. Galvin Bros. window made a pretty picture. It was a bed of asparagus and orchids from the centre of which sprang a rich cross of lilies.

In cut flowers, there was a fair supply of everything and no great overstock of any varieties except such cheap stuff as stocks, mignonette and pansies. Violets were quite plenty and formed the larger part of the stock in trade of the street fakirs. Carnations again ran short. They brought $4 per hundred on an average but a few fancy blooms went as high as $6. Some extra roses sold for $2 per dozen but $10 to $12 per hundred was the ruling price.

The principal stock in hybrids was Jacqs and Brunners of both of which there was ample supply. Bulb stuff was plenty and of excellent quality.

Lilies sold out fairly well everywhere, little being left that were good for anything. Prices all through held very steady, the cold weather in the early part of the week being very favorable to this condition.

The winner of the second prize cup for Waban at the recent exhibition was Mr. C. E. Holbrow, not H. E., as previously stated.

Chicago.

The Easter trade was on the whole very satisfactory. Certainly the grower has no ground for complaint. Flowers of every kind and condition realized very good prices and the market was cleared out to the very last flower.

The demand for shipping to outside points was extraordinarily large, and the commission men in consequence reaped a rich harvest, at the same time placing local florists at a disadvantage. The growers have learned by experience that it doesn't pay to hold flowers until the last day, well knowing that the same prices may be realized in the middle of the week. Consequently a large share of the stock was shipped out, leaving a rather limited supply for the local demand.

Prices on all kinds of stock were held at the highest notch. Roses in particular, contrary to all expectations, were very scarce. Most all orders were cut in two by the commission men. Carnations also, white in particular, were at a premium. The same might be said of violets. The demand for this flower was extraordinarily large and the demand could not nearly be met. The stock of Harrisiis was very large, but nevertheless not a flower was wasted. Callas, which ten days ago could hardly be given away, sold at sight at $15 a 100.

The reports from the retail trade are rather conflicting. The majority report a satisfactory buisness while others apparently did less business than in former seasons. The fact seems to be that the high prices of stock was owing not so much to an increased demand, as to the limited supply. Many of the retail men complain of the almost total absence of orders for made-up pieces, the demand being almost entirely for cut flowers, which of course calls for a higher grade of stuff, thus leaving the short stemmed and broken stock on the hands of the dealer, which otherwise could be used to good advantage in the making up of designs.

Most of the dealers laid in a heavy stock rather on speculation than on actual orders, and the prices realized were hardly in proportion to those paid.

The main increase in the volume of trade was in the sales of plants. There was a big call for Harrisiis, but candidums went slowly for Easter. Azaleas were next to the Harrisiis in demand and an immense number of moderate sized plants—from 12 to 16 inches across—were sold at prices ranging from $1.50 to $3.50 each. A few extra large plants were sold for as much as $10 to $15 a piece, but such sales were rare. First class Dutch hyacinths sold well and large lots were disposed of, but some second quality stuff was left over. Genistas did not sell well though good plants were offered at moderate prices. These do not seem to take so well here as in the east, and this is also the case to some extent as regards hydrangeas. Some hybrid roses in 6 to 8-inch pots retailed quick at from $1 to $3 each, probably averaging $1.50 each. These were grown in quantity by August Dressel this year. He also had a lot of Hermosas in 4 to 5-inch pots that sold readily at 75 cents each, some extra large plants bringing as high as $3 each at retail.

Church decorations were not nearly as elaborate as formerly, but the increased sales in other directions more than made up for this deficiency.

One grower sent in a lot of tulips, 3 in a pot, but they did not sell well. The flowers stood exposure poorly and soon wilted over, and that killed any prospect of sale to the retail buyer. Among other stock that did sell well was a lot of well flowered heliotropes.

Certainly the plant trade was very satisfactory, and it gives indications of still greater enlargement another Easter.

The project of an international chrysanthemum show at the World's Fair next November is now in the hands of the Executive Committee of the local Directory. All financial obstacles have now been removed, as President Chadwick, of the Hort. Society of Chicago, has pledged himself to raise a guarantee fund of $14,000 to guard against any possibility of a deficit. The secretary of the Hort. Society has received many letters during the past week from prominent chrysanthemum growers all over the country expressing confidence in the project and pledging support, though a few fear that it is a little late to prepare for an exhibition of such magnitude. The next issue of the FLORIST will in all probability announce the exhibition as a certainty or as having been abandoned. In the latter event the Hort. Society of Chicago will at once issue a premium list for an exhibition of its own next November.

F. H. Andermann, of Lake Forest, is adding three new houses, two 20x80 and one 20x180, all to be devoted to roses for cut flowers.

At the meeting of the Florist Club last Thursday evening, the lawyers' opinion upon the legality of the cemetery companies engaging in the business of growing cut flowers for market was read. Its general tenor was in accordance with views expressed by the members of the club who brought up the subject, but as it did not cover certain points upon which the club especially desired light, it was referred back to the committee to have the omissions covered. One new member was elected.

The event of the evening was the reading of an essay upon growing Dutch bulbs in America, by Mr. E. Buettner, and which appears elsewhere in this issue. Quite a discussion followed the reading of the essay, during which Mr. Buettner went further into detail in response to queries, and gave as another strong reason in favor of home grown bulbs the statement that he had found while abroad that only the poorest bulbs were sent from Holland to America, all the best being used to satisfy European customers, while most anything was considered good enough for the American trade. While the length of time necessary to grow hyacinth bulbs to a marketable size might deter American growers, who like quick returns, this would not apply to tulips, of which salable bulbs can be grown in a single season. He found that while bulbs grown here, in heavier soil than recommended, were rough in appearance, the flowers they produced were larger and finer, and with the bulb forcer it was fine flowers that were wanted, regardless of the appearance of the bulb from which the bloom was cut. He believed that before many years the bulk of the forcing tulips and narcissus would be home grown. One member questioned whether the bulbs could be ripened as sucessfully here as in Holland but Mr. Buettner maintained that our climate was such as to give us even a decided advantage over Holland in this respect.

The fact that Mr. Geo. Klehm, of Arlington Heights, is going more and more into the growing of tulips and other Dutch bulbs every year, now growing nearly all the tulips he forces, and that his flowers equal any sent into this market, certainly argues well in favor of home grown bulbs. His soil is rather heavy and the bulbs he grows are not at all smooth looking, but as he sells the flowers and not the bulbs he is well satisfied.

At the next meeting of the club Mr. John Thorpe will read an essay on the growing of chrysanthemum plants and flowers for exhibition.

Worcester, Mass.

The second spring show of the Worcester Horticultural Society, held April 14, was not as large as usual. It seemed as if everybody was holding their stuff back for Easter, though flowers are plentiful.

For best tulips, narcissus and hyacinths H. F. A. Lange took first and Joseph Brierly, second. The tulips and hyacinths were unusually fine. Narcissus also made a fine show. Joost von Vondel, Von Goojen and Yellow Prince tulips attracted the most attention.

Best round basket, 1st, H. F. A. Lange, 2nd, H. B. Watts.

Probably the most popular feature of the show was the twenty vases of cut flowers. The exhibit in this class was

especially good, some fine vases of jacqs and Perles being shown. H. F. A. Lange, first; H. B. Watts, second.

The zonal geraniums were rather lanky and ill-shaped. Joseph Brierly took first in this class, H. A. Jones, second.

A. H. LANGE.

St. Louis.

The weather has been cold and cloudy for more than a week and roses are off crop. The sun made us a visit Friday.

Easter sales were very large and all the retailers were near to the bottom of their stock early in the afternoon of Saturday. Many would-be purchasers of roses failed to find what they sought. Bulbous stuff is plenty, but prices good.

Nearly every one here buys loose flowers. St. Louisans love flowers for themselves, and demand them in their natural simplicity and loveliness. They have no use for the ugly unnatural designs of the makers up of set work.

The windows of the retail stores were tastily decorated, those of J. W. North, Elleard Floral Co. and Chandler Floral Co. deserve special mention.

But little decorating was done in the churches. Small quantities of flowers were used, but were as a rule tastily arranged. The best piece of decorating seen by your correspondent was at the Church of the Messiah, the most attractive feature of which was a well proportioned white cross about which smilax was gracefully twined. The background consisted of specimen plants of Ficus elastica. Lilies were grouped about the cross and below it was a bank of cupheas and other plants. The arrangement had a very natural appearance, as if the plants had sprung up around a cross set up in a nook in some garden. It would have been a good object lesson to those who make Easter crosses by covering a frame with flowers in the most unnatural manner.

The St. Louis Florists' Club held its regular monthly meeting Thursday with 15 members present. Three new members were initiated as follows: Frank Rotter, Frank Bucksahl and Fred Berning; the two latter are of the Ayres Floral Co. Four applications for membership were laid over until the next meeting under the rules. The exhibition committee reported that the contract had been closed for the rental of Grand Music Hall for next fall's chrysanthemum show. The preliminary premium list is now ready and will be sent on application to E. Schray, 4101 Pennsylvania avenue. The subject of the day was the growing of chrysanthemums, by Julius Koenig. Votes of thanks were tendered the American Florist Co. for the copy of their new directory kindly furnished the club; the Florists' Exchange for a binder and a copy of the Exchange to fill the same; also to Mr. J. W. Dunford for his efforts in reporting the doings of the club to the AM. FLORIST.

The Gardeners', Farmers' and Fruit Growers' Association met week before last. This association was organized a little more than a year ago and now has a membership of between six and seven hundred. Its object is to establish a wholesale and retail market, large enough to accommodate all the growers of vegetables, fruits, flowers, plants and general farm products. It has already succeeded in getting a law passed by the state legislature requiring all cities that now have or shall hereafter attain to a population of 300,000 or more, to establish and maintain a general wholesale and retail market for gardeners, farmers and dairy men, accessible to the producer only. It is the intention of the gardeners to have adjoining this market a retail market to accommodate the green grocer, butcher and retail florist. At this meeting a committee of three was appointed to wait on the florists to see if they could be interested in the market question. Why would not such a market be of as great advantage to the florist as to the gardener and farmer? J. C. D.

Buffalo.

The rush of Easter (and a truly great rush it has been) is over. But the smoke and din is not sufficiently cleared away for me to give you a very reliable report of the business done, which shall follow next week. It is safe to say, however, that the volume of business done in this city far exceeded any previous Easter week. There are more people to do business, far more goods to sell and all hands were busy. Plants and cut flowers are the great bulk of the sales, and the flower above all others in demand, at any rate with the million, is the carnation.

Church decorations were certainly no more elaborate than former years, if as much so, and memorial designs seem to loose favor more and more each year, but to offset this a plant or vase of cut flowers is exchanged by friends, yes, by almost every one, and poor was the child yesterday who could not afford a carnation or rosebud for Easter Sunday.

The weather might have been worse, but not a great deal. Sharp frost every morning last week, followed by a cold biting wind, which made the delivering of flowering plants, lilies in particular, a difficult task to do satisfactorily, and caused much extra work and sorrow.

How the plant man who has been keeping his stock of bedding plants crowded up in corners in small pots and giving most space to lilies and other Easter stock will have to hustle to get his plants ready for the spring rush! It is "officially" announced among the craft here that Mr. Dan'l B. Long will on May 1 give up his store on Main street and remove to larger quarters on Washington street, where he intends to give his whole time and attention to the wholesale trade. Mr. Long is so well and favorably known that this undertaking should be a great success and the city is getting large enough to warrant our having a good commission dealer and florist supply man. G. S.

Cleveland.

Easter trade panned out splendidly. Plenty of flowers (to start with) and plenty of buyers. The latter held out the longer so that everything desirable was cleaned out before closing time.

There were some fine Jacks in the market, and plenty of them, which sold like hot cakes. One large grower shipped several hundred fine jacks to Chicago, Pittsburg and Buffalo, respectively, besides supplying his home trade and the neighboring towns.

There were plenty of candidums, callas and Harrisii, with a sprinkling of Longiflorum. As a rule lilies were not in as great demand this Easter as in former years. There was a great demand for carnations as usual, especially for colored varieties. There were some very fine Buttercup and Daybreak which sold readily at $1 per doz.

Violets were very scarce, and as usual in such cases, in great demand. Some stuff shipped in here from New York were violets in name only. Why can we not have good violets for Easter and the festive season following that day? I think it could be done by growing them in cold frames, and surely it will pay.

There was a large stock of Von Sions on hand but they all went and more could have been disposed of. One church at Canton, O., sent up for 1200 daffodils. They were used to distribute among the Sunday school scholars and their friends. What a delightful custom that would be (for the florists) if all the churches would make some such provision every Easter.

The maximum wholesale prices were as follows: Gontiers 6, Perles 8, Mermets and Brides 10, Jacks 20 to 25, carnations 3 and 4, Harrisii 18, Callas 15, bulbous stuff 5 to 6. L. F. D.

Toronto.

Before this is printed a considerable quantity of Easter eggs will have been destroyed and it is to be hoped that every enterprising florist will have deposited a good sized egg in the form of hard cash to his credit in the bank. If the weather is favorable the indications are that an immense increase of business over last year will be reported from this city, and in any case it will be quite as large.

Harrisiis have already been in the stores for some time, but the bulk will come in just about right. Last year a great part of the stock did not put in an appearance until some time after Easter day.

Roses are likely to be none too plentiful with prices firm at good figures, as Toronto has to supply many outside towns and cities in Canada.

Outdoor gardening operations are now in full blast and the dyspeptic householder who proposes to take exercise by doing a "little bit of gardening" may be seen in the gloaming prowling around armed with a toy wheelbarrow and the furnace shovel in search of free sod or black earth on the nearest vacant lot.

I notice the sum of $60,000 has been voted by the Provincial Legislature for laying out the grounds surrounding the new Parliament buildings in Queens Park now nearly completed. It is to be hoped that a thoroughly competent man will be appointed to carry out the job, because for the above amount something pretty good might be done. E.

Baltimore.

Easter is past, and after the whirlwind of trade that took up the last three days of the week comes the lull before the full storm of spring sales begin. Meanwhile the grower and dealer are each blessing themselves for having things, and cussing themselves for failing to have them when the rush came. Everything sold and brought good prices and the dealers that have recovered from the strain sufficiently to express themselves all are jubilant and declare it the best season for years.

Saturday was rather windy and dusty but Sunday was a model Easter, clear, calm, balmy, beautiful.

The churches were as a rule elaborately decorated and the improvement over former years was very marked; but the place to see flowers was Charles street in the afternoon, when that fashionable promenade was thronged with the beauty and culture of the city, and fair faces, fair garments, and still fairer flowers, made a bewildering display. Flowers were everywhere. The windows of residences were aglow with bloom in vases or on plants and each fair promenader wore a cluster of flowers varying from modest violets to costly orchids, the finest effect seen by

the scribe being a spray of three Lælia pupurata blooms worn by a lady so pretty that it was hard to say whether the flowers improved the wearer or vice-versa.

The general resolve is to grow or buy still more stuff next time. And for the present the pessimist who cries "over production" hides his diminished head.

MACK.

Hartford, Conn.

The spring exhibition of the Hartford Horticultural Society opened at 2 p. m. April 12th, continuing till 10 p. m. April 13th. It was a very creditable show and was well attended. The judges were Robt. Veitch jr. of New Haven and E. S. Geer of Hartford. Competitions for premiums in bulb classes, such as hyacinths, tulips, jonquils, etc., was confined mainly to A. N. Pierson, B. E. Beemer and J. H. Bairdain, each of whom had a fair share of 1st, 2d and 3d prizes. James Smith was first on cinerarias and cyclamen, specimen azalea, and Robert Patchet first on specimen hydrangea. The rose premiums all went to A. N. Pierson. J. H. Bairdain's carnations were very fine, as were the calceolarias from Stephen Delbar and collection of plants from W. B. May.

IN THE orchid collection of Mr. H. Graves, Orange, N. J., there are now in bloom a fine form of cattleya which Mr. Robert M. Grey, the gardener in charge, has named Cattleya Gravesiæ, and a fine variety of Cypripedium Lawrenceanum, which Mr. Grey has given the name C. L. var. punctatum.

The Nursery Trade.

Early Flowering Shrubs, April 11.

THE FRAGRANT BUSH Honeysuckle (Lonicera fragrantissima) is opening nicely, and Standish's bush honeysuckle is in full bloom. In style, color and sweetness of flowers both are much alike; the first-named is the rankest grower, and the last named the soonest done blooming. Both are very desirable shrubs.

JASMINUM NUDIFLORUM. Two years ago this was in as good bloom in December and January with us as it now is in early April. It is a very welcome winter shrub and its arching wands are studded all over with golden blossoms. But north of here it is not reliably hardy.

THE JAPANESE WITCH HAZEL (Hamamelis Japonica) was belated till March this year. This is really a first-class garden shrub: its branchlets from the ground up are covered with bright yellow fantastic flowers incomparably superior to those of the American witch hazel.

ANDROMEDA JAPONICA is in good bloom. It is earlier than our native A. floribunda, and easier to grow. Makes a pretty bushy little evergreen, and loves a little shade from warm sunshine and shelter from piercing winter winds.

RHODODENDRON DAURICUM began to bloom before the fierce weather of March had left us and now is quite showy. Although not an uncommon plant we seldom see it in gardens. An evergreen, erect shrub, 4 to 6 feet high, and with small, scant foliage. Its chief value consists in its hardiness and early flowers. Slow growing. A good associate for Ghent azaleas.

DAPHNE MEZEREUM is one of the handsomest of spring-blooming shrubs, bright, showy and long-lasting, and in a few weeks after the blossoms have gone, a crop of brilliant red berries ripen on the branches. This little shrub is very hardy, easy to cultivate and long-lived, but insists upon an open situation to grow in. We have the pure white flowered one and the red one growing side by side.

DAPHNE CNEORUM is coming into bloom. It is a compact trailing evergreen, small bushy species with delightfully fragrant flowers which appear in quantity in spring and again in lesser degree in fall. It grows with the greatest luxuriance in cool, northern and mountainous parts, but in other places, Dosoris for instance, it is not at all at home.

DAPHNE LAUREOLA, the European spurge laurel, has been in flower for some weeks, but its yellowish blossoms are inconspicuous, and the plant only valuable as a little evergreen undershrub.

DAPHNE BLAGAYANA is a precious little alpine species, with delicious white blossoms, and one of the earliest blooming, but it can never become popular because of its exceedingly slow growth.

ERICA CARNEA, also known in nurseries as E. herbacea, is a charming little bell heather, and has been in full bloom for two or three weeks. An exquisite plant for amateurs and one of the few heaths that thrive well with us. But I question if our nurserymen can get it up quick enough to make handling it profitable, for it is slow growing. We have the pure white flowered one also in bloom alongside of the red. These bell heathers are much unlike the Scotch heather (Colluna vulgaris) in size and habit of plant, shape of the flowers, and time of blooming.

CORNUS MASCULA, the Cornelian cherry, studded all over with umbels of small yellow flowers about the first of April, is a very striking shrub and well worth growing. The variegated-leaved forms are also in fine bloom, but they don't make such big bushes.

CORNUS OFFICINALIS from Japan resembles the Cornelian cherry, and is quite as hardy and showy. On our plants the flower umbels are larger and the pedicels longer.

DIRCA PALUSTRIS, our native heather wood, is the most perfect miniature likeness of a massive umbrageous tree one can imagine. Just now it is hanging full of little yellow blossoms. Although never showy it is always interesting, and both the young folks and the grown up people too are cutting off a little twig now and again to have some visitor try his strength in breaking it.

MAGNOLIA STELLATA takes the lead, its fragrant starry blossoms have begun to open. As a choice, small shrub this is a gem and one of the easiest of the genus to transplant. M. conspicua will begin to open in a day or two.

FORSYTHIA SUSPENSA in warm places has opened a few flowers.

ALTHOUGH SHEPHERDIA is in bloom its flowers are too inconspicuous for notice.

RED MAPLES are fine. Soft maples fading.

PRUNUS MOLLIS leads among plum trees with myrobolana close behind it. Beginning to open.

BERBERIS JAPONICA protected with some spruce branches is very healthy in foliage, and its yellow flowers are beginning to expand.

CORYLOPSIS PAUCIFLORA is a mass of drooping golden drop buds which in a few days will be a pretty sight. A compact, low, wide-habited bush, and one of the coming choicest little shrubs of the garden. Another species of golden drops namely, C. spicata, of more upright and rank growth and with longer little clusters of yellow flowers is also in bloom but the first named is the prettiest bush.

WM. FALCONER,
Glen Cove, Long Island.

New York.

The Commissioners of Accounts are investigating the workings of the horticultural department of the New York parks, and Superintendent Parsons and Superintending Gardener Woolson have been on the coals for nearly a fortnight. Parsons has demanded a hearing; Woolson has resigned rather than submit to an examination. Mr. Parsons' father and two brothers own and run the Kissena Nurseries at Flushing, but he himself is in no way interested in them, still an attempt has been made to show that he has specially favored the buying of trees by the parks from these nurseries. Mr. Parsons, however, indignantly denies this charge. Mr. Woolson owns and runs a nursery at Passaic, N. J., under the name of Meyers & Co., and witnesses have been called to show that he was very partial to having plants for the parks purchased from the Passaic nurseries. But to impartial people the majority of the witnesses examined by the commissioners have been of a very unsatisfactory sort and their testimony repugnant. Many of the witnesses consisted of disgruntled, disaffected, reduced or discharged employes, a disappointed competitor for Woolson's job, and a Ph. D. for whose entomological practical science neither superintendent or gardener seemed to have profound respect. Still this same insecticide compounder testified to Woolson's horticultural ignorance and submitted a list of 150 trees that had been wrongly named by the gardener and rectified by the man of bugs!

DELTA, COLO.—Carr & Hauser will establish a nursery here.

BRIGHAM CITY, UTAH.—The local press asserts that home nurseries are needed here.

MINNEAPOLIS. — Mr. Wyman Elliott, well known to nurserymen and fruit growers, has removed to California which he will now make his home.

BLOOMINGTON, ILL.—Mr. Markle, of Chicago, has offered $32,000 for Dr. H. Schroeder's nurseries in this city, but the doctor refused to take less than $36,000.

RACINE, WIS.—The Racine Fruit Growers Association has been incorporated, without capital. The incorporators are Frank Rasper, W. J. Hansche, A. J. Fidles and others.

RIVERSIDE, CAL.—S. C. Ward has sold to Mr. Chase for the Rochester Nursery Co., a plot of ground, consideration $1500. The company now owns 70 acres in one body and intends to establish a nursery here.

PORTERVILLE, CAL.—At the last meeting of the Porterville Horticultural Society a resolution was adopted petitioning the legislature of the state of California to repeal the law taxing non-bearing orchards. The resolution will be followed up by active work on the part of the society to secure the wished for legislation.

Catalogues Received.

Jacob W. Manning, Reading, Mass., ornamental nursery stock; same, hardy perennials; same, fruit stock; same, recently introduced hardy herbaceous perennials; C. Petrick, Ghent, Belgium, plants, A. Bowerman, Winnipeg, Manitoba, plants; John Laing & Sons, London, England, caladiums; Samuel C. Moon, Morrisville, Pa., nursery stock and plants; W. J. Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

IN PREPARING your premium lists for 1892 do not fail to have printed thereon the name and full address of the secretary or other official with whom entries should be made and to whom correspondence relative to the exhibition should be addressed. This is especially necessary where the organization is located in a large city. For while letters without street address may possibly reach the secretary, possible correspondents feel doubtful about it and many would feel too doubtful to try, knowing that there is a possibility that the secretary may live in a suburban town and have no city address. This applies with equal force to club stationery. If it is considered best not to have the names of the officers on the letter heads, etc., so the same style may be used by successive sets of officers, then provide the secretary with a rubber stamp with which he may impress on each letter he mails his name and full address. Make communication with your organization just as easy as possible.

A SAMPLE floral wire design has been sent us by the Barbee Wire and Iron Works, Chicago, a novel feature of which is that it has been tinned, thereby soldering every joint and giving the design a bright appearance as well as adding to its strength, and avoiding the possibility of rusting. It seems a decided improvement over the usual plan of dipping the designs in paint.

SOME VERY fine clematis blooms are sent us by Mr. F. A. Baller, Bloomington, Ill. The varieties sent were Lucie Lemoine, Duke of Norfolk and Patens Sieboldii. One bloom was four and one-half inches across. Mr. Baller writes: "I think you will agree with me in thinking them very handsome to grow in large pots or tubs for decoration plants."

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

FOR SALE.

Nine Green Houses containing about 10,000 feet of glass, stocked with carnations and heated by steam. Also grapery 80 feet long, recently built; about 30 acres of choice land, abundance of fruit of all kinds, large commodious house containing 15 rooms, including bath room, a new barn and necessary out-buildings, within 5 miles of Philadelphia and one mile from station. Will be sold on account of ill-health. Address I. LARKIN, Toughkenamon, Chester Co., Pa.

FOR SALE.

Nine greenhouses, containing 16,000 feet, of glass, with 8 lots of land, each 40x175 feet elegant dwelling with 11 rooms; barn, wagons, cart, horse and harnesses. The above property is located in one of the most beautiful western cities, within 5 miles of the city hall, within one square of electric and cable cars: the same will be sold cheap, as the owner is not able to run the same himself. The above houses have only been built 5 years; modernly constructed, 12x18 double thick best quality glass; heated by steam; abundance of water both from wells and cisterns. They are filled with palms, ferns, roses, carnations and bedding plants of all descriptions, and all will go with them. Address J M, care American Florist, Chicago.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

McLEOD & DENHAM, seedsmen at Los Angeles, Cal., have dissolved.

F. C. HUNTINGTON, of Indianapolis, will sail for Europe May 18 for the benefit of his health.

MR. DAVID CLIFFE, representing Z. DeForest Ely & Co., of Philadelphia, is making a western trip.

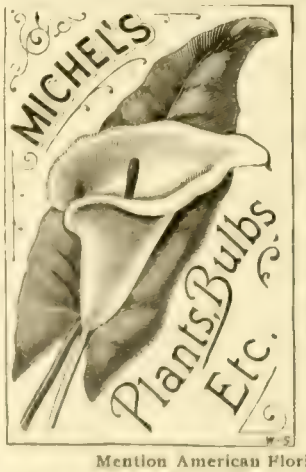
SAN FRANCISCO.—The Sherwood Hall Nursery Co. has acquired the business of the Northern Seed Co. and will continue same at 427 and 429 Sansome street.

NEW YORK.—"Working nights" is the short but expressive reply given by the seedsmen to the enquiry "How's business?" Mr. Carroll Elliott has been preparing for the summer leisure by purchasing a yacht. This was a simple matter, but the selection of a name for the boat is not so easy, and he has finally asked for counsel and suggestion from Mr. Kidd of John street, on this important matter. Whether it will be called the "Seedsman" or the "Pirate Kidd" or a combination of the two is not yet settled.

SEED ORDERS.—A large firm of London seedsmen, writing to us of their experience as seedsmen, deplore, together with, as they believe, the whole trade, the withholding of orders for seeds, &c., when periods of winterly weather like that lately experienced occur, with the result that the large staff provided to meet the expected large amount of business are for the time only partially employed. Then the weather changes, and with the first appearance of sunshine the seedsman is overwhelmed with orders, and the employes are enforced to work very hard, and for a greater number of hours than would be desired either by the employer or the purchaser, and which we feel sure, if it were brought to the notice of the latter, they would desire most carefully to avoid by sending their various orders as early in the year as possible, without paying heed to the weather then prevailing.—*Gardeners' Chronicle.*

Moon and Sweet Peas.

The first lot *sown under the new moon* will grow fast and blossom most beautifully but *will not bear fruit.* The second will blossom and bear very little. The third will blossom beautifully and bear fruit in abundance. The fourth will scarcely rise from the ground.—*Ida I. Beals in Mayflower.*



This evidently accounts for the short crop of sweet pea seed.

WE HAVE received from Mr. L. E. Marquisee, Syracuse, N. Y., a rose bloom, half pink and half white, evidently half Mermet and half Bride. On one outside petal the division was as exact as if laid out with a rule.

THE St. Louis Florists' Club has issued an announcement of premium classes for its chrysanthemum show Nov. 8 to 11 next. Copies may be had on application to the secretary, Mr. Emile Schray, 4101 Pennsylvania avenue, St. Louis.

W. W. BARNARD & CO.,

6 and 8 North Clark Street, CHICAGO.

Coloring Hydrangeas.

To color Hydrangea hortensis blue I mix with the soil iron filings and grind stone "slime" (dust). Shortly before flowering iron filings are mixed with water, for watering twice a week. If hydrangeas are repotted in such soil as above, five or six weeks before flowering, the flowers will be red and blue.

So. Butte, Mont. JOE SMELY.

A ROCHESTER florist sends us a clipping from a local paper, evidently a paid reading notice, in which the advertiser is credited with no less than 185,000 feet of glass. He writes: "The enclosed adv. shows a large establishment in this vicinity that has probably never been reported before, and as florists like to visit others' places it would be well to know where these 4 acres of glass are." On looking up the gentleman in our new directory we find him listed as a store florist only, without any greenhouses of his own. But our correspondent must not be too hard. What is a trifle of 4 acres of glass (on paper) in these breezy times!

PHOENIX NURSERY COMPANY
Successors to SIDNEY TUTTLE & CO., BLOOMINGTON, ILL.

GARDINER'S STAR COLLECTION OF SUMMER BLOOMING GLADIOLI.

WE offer a grand lot of selected **named varieties** this week at figures we have never before touched. If you want something really fine at a low figure this is an opportunity not to be missed.

Offer No. 1. TEN CHOICE NAMED SORTS including such beautiful and favorite sorts as Princess of Wales, Napoleon III, Eugene Scribe, Ceres, Gen. Sherman, Lamark, etc., in equal parts, at $3.00 per 100; each sort distinctly labeled and securely packed to ship safely any distance.

Offer No. 2. FOUR DISTINCT COLORS, (without names), scarlets, whites, pinks and variegated; each color separate, (in equal parts), at $2.00 per 100; all distinctly labeled and securely packed.

Offer No. 3. We can also offer OUR SUPERB MIXTURE ON ALL COLORS MIXED consisting of the best French and American hybrids in endless variety of color and containing the largest proportion of the lighter shades, at $1.75 per 100; $15 per 1000. Also OUR FINE MIXTURE (which is almost as good, although not having quite so many varieties in it and having a somewhat larger proportion of the darker shades), at $1.25 per 100; $10 per 1000. Order early, and mention the AMERICAN FLORIST to secure these special rates. This offer is not binding after our present stocks are exhausted.

THE BEAUTIFUL SPIDER LILY.

We have a fine lot of large, sound bulbs of this. Our price has been $8.00 per 100 until this week; but we offer now at $4.00 for prompt orders to clear. The Spider Lily is an excellent plant either for pots or in the summer garden. Free flowering and very fragrant.

BEGONIAS.

The great "Gold Medal" strain. If you have not secured your supplies of these do so at once. The way stocks are melting away is a caution. We have six separate colors in the **SINGLES** and **EIGHT** in the doubles. Colors separate (equal parts), $10 per 100 for **SINGLES**, and $20 per 100 for **DOUBLES**; 25 at 100 rates. **MIXTURES** five per cent. less than these figures.

JOHN GARDINER & CO.,
Seed and Bulb Growers, Importers and Dealers, **PHILADELPHIA, PA.**

When in want of anything in Seeds or Bulbs, write us for prices before ordering elsewhere.

LAST CALL.

In order to make short work of what stock of the following still remains on the place we make the following prices, good till **April 24;** if order is received after that date prices will be the same as in FLORIST of March 24, subject to being unsold:

	Per 100
Dracæna australis, 18 to 24 inches high	$18.00
" " 24 to 26 inches high	35.00
Dahlias, single roots	2.00
" clumps	6.00
Tuberous Begonias	5.00
Hibiscus Grandiflora, 2½ and 3-inch pots	4.00
English Ivy, 18 to 36 inches	5.00
Clematis, best varieties, 8-inch pots	40.00
Echeveria rosea, 2 to 4 inches diameter	3 00
Hydrangea Otaksa, 6-inch pots	15 00
" Thos Hogg, 6-inch pots	15 00
Roses, mixed sorts, 3 to 5-inch pots	5.00
Cyclamen giganteum, 5-inch pots	12.00
Marguerites, large white, bushes 2½ to 3 feet high	12.00
Callas, 5-inch pots	12.00

For other stock not enumerated in the above list, also Rustic Vases, Iron Vases and Window Boxes, see FLORIST issue of March 24.

Special offer for Easter, see FLORIST issue March 31.

ADIANTUM CAPILLUS VENERIS—The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. If you are short of room now we will book your order and ship any time up to May 15th. **Price, strong plants, $8.00 per 100.**

For bargains in Plants, see issue of March 24.

Exhibitions.

Last November the Pittsburg and Allegheny Florists' Club gave its first chrysanthemum show and the following statement of receipts and expenses will probably be of interest in connection with the discussion upon the subject of exhibitions:

RECEIPTS.

Admissions at 25c. each, children 15c.	$2166.10

EXPENDITURES.

Premiums paid	$415.00
Rent of hall	300.00
Music	210.00
Printing and advertising	188 60
Decorating hall	244.93
Salaries for judges	35.00
	1393 53
Net gain	$ 772.57

Special premiums to the amount of $400 were given by citizens, but as they were no expense to our club they do not enter into our account. H.

Here is a statement of receipts and disbursements at the last chrysanthemum show of the Buffalo Florists' Club:

RECEIPTS.

Admissions	$859.40
Entry fees	54.20
	$913.60

EXPENSES.

Premiums paid	683 50
Rent of hall	350 00
Music	186 00
Printing and advertising	263 45
Judges	32.00
Miscellaneous	155 31
	1670.26
Deficiency	$ 756.66

The box office receipts were on the first day $170, second day $253.65, last day $413.75. In addition there were outside ticket sales of $22. L.

News Notes.

GRAND RAPIDS, MICH.—April 5 and 6 this city had its first spring flower show.

SAN FRANCISCO.—The seventh annual flower show of the California State Floral Society will be held May 11 to 14.

MARSHALLTOWN, IA.—Only trifling losses from loose ventilators, etc., here during the late terriffic wind storm. No hail.

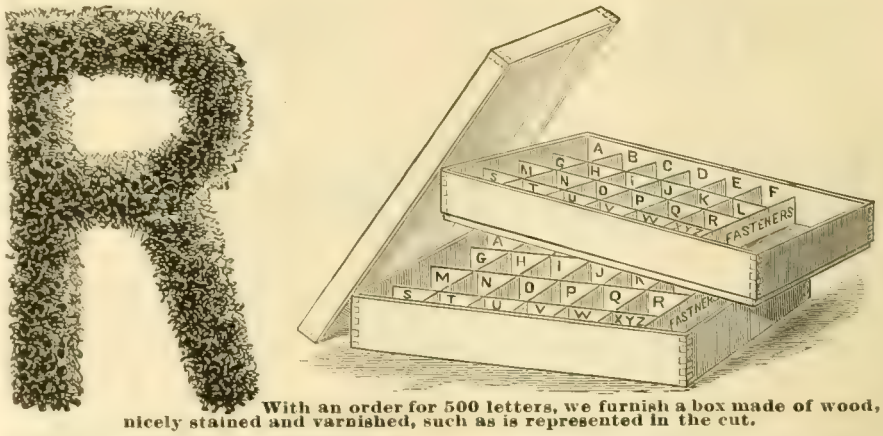
VENTURA, CAL.—Mrs. Theodosia B. Shepherd has just completed a new greenhouse 42x18 and has made many improvements on her place.

PITTSFIELD, MASS.—The Berkshire County Gardeners' and Florists' Club is quite a lively infant. There are now 45 members and more to follow.

TOLEDO, O.—Mrs. Thomas Temple (widow of the late Thomas Temple) has opened a floral store at 317 Adams street, in the best part of the city. She has the best wishes of the trade for success.

EDWARDSVILLE, ILL.—J. F. Amman, formerly of Alhambra, has removed his business to this place, and will put up about $6,000 feet of glass this season using mainly the material in his old place.

NEWTON, MASS.—The Newton Horticultural Society has established a series of prizes to be awarded to citizens of Newton for the best results in collecting the eggs of the tent caterpillar up to April 30. Worthy of general imitation.



MINNEAPOLIS.—At the meeting of the Minneapolis Florists' Club, April 9, the premium list for the chrysanthemum show next November was adopted. A rose show in June was under consideration and the matter was referred to a committee.

PROVIDENCE.—The rose and strawberry exhibition of the Rhode Island Horticultural Society will be held June 15 at Tillinghast's Assembly rooms, 235 Westminster street. Copies of the premium list may now be had from the secretary, Mr. C. W. Smith, 55 Westminster street.

SALINA, KAN.—Fortunately there was but little damage done to greenhouses by the recent storm. Some glass was lost through hail, and some hot bed sashes were broken through the high wind, but the losses were so trifling under the circumstances that we consider ourselves very lucky.

SAN FRANCISCO.—At the April meeting of the California State Floral Society, Captain E. Kellner read a paper on the California poppy, and E. D. Sturtevant of Los Angeles read another on aquatic plants. Secretary Emory E. Smith was granted a leave of absence to enable him to make a tour through Europe. Chas. S. Aiken was appointed to act in his place. The discussion of the day was upon the flower show to be held next month.

SAN FRANCISCO.—The Sherwood Hall Nurseries will hereafter have headquarters at 427 and 429 Sansome street, this city, and will handle a general line of seeds and bulbs in addition to their former business in plants, etc., working under the title of Sherwood Hall Nursery Co. To this end they have acquired the business formerly carried on by the Northern Seed Co. The nurseries at Menlo Park will be retained and conducted in conjunction with the city store.

With an order for 500 letters, we furnish a box made of wood, nicely stained and varnished, such as is represented in the cut.

PATENT GLAZIER Twin Points.

THESE POINTS are far superior to the old mode of setting glass, as they will hold each pane in place, preventing the glass from slipping and causing binding and cracking. Each box contains 500 rights and 500 lefts. We also make a tool for driving the points. **Price, 35c a Box. Driver, 15c. A Liberal Discount to the Trade.**

These points are kept by all prominent Hardware, Paint, Oil, Seedsmen, and Florist Supply Stores in the country. If you do not find them, send postal for a free sample, or send 69 cents for 1 package and 1 driver by mail, post paid to any part of the U. S.

H. W. EAMES CO., Milford, Mass.,

Proof of Botanical Theories.

ED. AM. FLORIST:—I send to you by this mail a spike of Salvia splendens, showing the metamorphosis of the tip florets to green leaflets. Notice the gradation of tips of sepals from green-shade to green. I send this thinking you might find something in it to interest AMERICAN FLORIST readers in the truths of botanical theories.

Shiremanstown, Pa. JOHN F. RUPP.

[The specimen admirably illustrated the generally accepted theory that flowers are simply changed leaves, showing all the stages of reversion of the flowers back to the green leaf form.—ED.]

"Awful Prices Paid for Flowers."

All the liberal people do not live in the south. Here is an order received by a northern florist in the winter. "A corsage bouquet for a lady—a couple of rosebuds and some fine flowers and nice green, all that can be given for five cents." Rosebuds were then 25 cents each. Florists everywhere find great hearts to deal with.

N.

THE EVANS CHALLENGE VENTILATING APPARATUS.

SECURES VENTILATION IN CASE OF STORMS. WITHOUT A RIVAL, EITHER IN COST, SPEED IN OPERATING OR SIMPLICITY.

— MANUFACTURED BY — QUAKER CITY MACHINE CO., 1108 and 1110 North E Street, RICHMOND, IND.

WHEN WRITING FOR ESTIMATES, PLEASE GIVE FOLLOWING DIMENSIONS:

1st. Give the number of sashes to be lifted.
2nd. Give the length and depth of sashes, (depth is down the roof.)
3rd. Give the length of house.
4th. Give the height from the ground to the comb of roof.
5th. Give the thickness and width of rafters or sash bar.

Mention American Florist.

AS SEEN by the reports in this and last issue the Easter trade of 1892 shows the usual annual increase, and the expansion seems to have been more widespread than ever before, the reports from every section being practically unanimous as to an increase of from 10 to 35%. The average increase might be placed at 20%. The call everywhere seems to be more and more for loose flowers and blooming plants.

Compared With That of Last Year.

REPORTS FROM ALL SECTIONS.

HAGERSTOWN, MD.—25% larger. Prices same. Supply larger.

NASHUA, N. H.—10% larger. Increase for Harrisii. Prices same. Supply fully as good.

MERIDEN, CONN.—About 20% larger. Prices about same. Supply better in every way.

IOWA CITY, IA.—Easter trade most excellent. Never before did flowers sell so freely here.

MEMPHIS, TENN. — Slight increase. Prices rather lower. More demand for cut flowers.

WILMINGTON, DEL.—Much larger. Increase for hydrangeas. Prices same. Not enough cut flowers.

RAHWAY, N. J.—Much larger. Prices about same. Supply greater in quantity, quality about same.

CONCORD, N. H.—About 10% increase, mainly for lilies. Prices about same. Supply rather better.

SPRINGFIELD, MASS.—10% larger. Increase in call for roses, pinks and Harrisii. Prices same. Supply better.

LANCASTER, PA.—Increase of 10%. Prices same. No change in proportion of plants and flowers. Supply better.

CLINTON, MASS.—One third larger. Prices same. Same proportion of plants and flowers. Supply better in quality.

PAWTUCKET, R. I.—Increase of about 20%. Cheap flowers and plants sold quickest. Prices same. Supply better.

HOLYOKE, MASS.—Much larger. Increased call for roses, pinks and lilies. Prices same. Supply larger and better.

ALBANY, N. Y.—About 25% larger. Increased call for violets. Prices about the same. Larger supply; quality about same.

SCHENECTADY, N. Y.—About one-third larger; prices and supply about same, except on carnations which were scarce and high-priced.

DAVENPORT, IA.—From 10 to 15% increase. Heavy demand for callas. Prices same. Harrisii lilies better. Fair supply other flowers.

UTICA, N. Y.—About one-fourth larger. Increased call for everything. Prices about same. Supply good and everything used up.

AUBURN, ME.—About same. Less call for lilies and more for carnations. Prices practically the same. Supply about same, quality better.

WOONSOCKET, R. I.—Much larger, the increase being entirely for cut flowers. Supply about same in quantity but not so good in quality.

ERIE, PA.—About 10% increase. Greater call for Harrisii and decorating plants, also for daffodils. Prices about the same. Supply a trifle better.

ELMIRA, N. Y.—About 25% larger. Increased call for carnations. Advance in prices of roses and carnations. Supply better in quantity and quality.

HAVERHILL, MASS.—10% larger. Slight increase for lilies and carnations. Prices about same. Supply larger and of better quality. Everything cleaned out.

SAVANNAH, GA.—Increase of 10%. More call for lilies. Prices substantially the same. Proportion of plants and flowers and quality of supply about same.

TOWANDA, PA.—Increase of about 30%. More church decorations and greater call for Harrisii. Prices about same. Increased call for plants. Supply better.

YORK, PA. — Larger. Prices about same. Supply better both as to quantity and quality. Last year weather was against us, this year weather was fine.

SARATOGA, N. Y.—At least 25% increase. Less call for tulips. Prices about same. Larger supply and quality good. Increased call for violets. Everything sold.

TORONTO, ONT.—About 25% greater. Prices lower. Supply better. Sales of plants and flowers in about usual proportion. Plenty of everything but violets.

HARTFORD, CONN.—About 20% larger. Increased call for lilies and carnations. Prices about same. Plants in greater demand. Quality good but quantity short.

SYRACUSE, N. Y.—Much larger. Increased call for fine roses and carnations. Prices averaged somewhat lower. Supply larger and quality finer, especially on roses.

CINCINNATI.—About one third larger. Less call for lilies; roses and carnations preferred. Prices about same as last year. Everything sold and quality was good.

WASHINGTON.—About 40% increase. As usual potted plants took the lead. Prices about the same. Supply ample and qual-

ity fine. Perfect weather greatly helped sales.

JAMESTOWN, N. Y.—About one-fourth larger. Prices about same. Had nearly enough to meet demand. Can't afford to buy outside. Prices asked leave us no profit.

DENVER, COLO.—About same. Increased call for Harrisii and hydrangeas. Prices somewhat lower on flowers, about same on plants. Supply larger and of better quality.

TRENTON, N. J.—Increase of 30 to 40%. Everything sold. Prices a trifle better. Flowers and plants in about same proportion. Hyacinths and roses were shortest in supply.

NEWPORT, R. I.—About 25% increase. More call for violets and lilies, less for roses. Prices about same. Supply larger and quality better. Easter trade increasing every year.

LACONIA, N. H.—20% larger. Increased call for roses and lilies. Prices about same. In plants more call for lilies and hydrangeas. Supply about same. Church decorations larger.

DETROIT.—Slight increase, probably 10%. Increased call for violets, Harrisii and pink hydrangeas. Prices about same. Supply also about the same. Demand for tulips decreasing.

CLEVELAND.—Increase of 25%. Not so much call for lilies, more for roses and fine flowers. Prices a little lower. More blooming plants sold. Flowers of better quality, except violets.

LOUISVILLE, KY.—About 25% greater. Main call was for roses. Prices much better. Plant trade was immense with lilies in the lead. Supply short. Church decorations 50% greater.

GRAND RAPIDS, MICH.—Much larger. More call for roses and boxes of loose flowers. Prices about same. Quality and quantity fully equal to last year. Easter lilies rather scarce.

LOWELL, MASS.—Increase of 15%. More call for lilies, roses and carnations. Prices same, except on lilies which were lower. Supply larger and quality better. Enough of everything except roses.

PITTSFIELD, MASS.—About one-third larger. Increased call for Harrisii lilies, Mermet and Bride roses and carnations. Prices quite as good; higher on carnations. Supply good and quality first class.

MILWAUKEE, WIS.—About 25% larger. Increase in call for roses, carnations and lilies. Prices same. No change in proportion of plants and flowers. Supply better in both quantity and quality.

KEENE, N. H.—About same. Increased call for lilies and roses. Prices same except on pinks which were 50% higher. Supply fully as good. Big call for loose flowers and but little for design work.

HARRISBURG, PA.—Large increase. Everything in bloom sold well, especially hyacinths. Prices about the same. Supply was better as to both quantity and quality, but was still not equal to demand.

DANVERS, MASS.—25% larger. Increased call for pinks. Prices same. Supply better and more of it. Lilies from Bermuda were in market but could not be compared with home grown stock in quality.

MINNEAPOLIS.—At least one third more. More call for Harrisii lilies and hydrangeas and less for candidum. Prices about same. Much larger call for plants. Stock better and more of it, supply being about equal to demand.

EVANSVILLE, IND.—About 25% larger. More call for Harrisii in pots and cut roses. Prices about the same. Supply larger and of better quality. The weather hurt sales as many customers would not come out.

ST. ALBANS, VT.—One third larger. Increased call for roses, lilies, carnations and all white flowers for decorating. Prices trifle higher. In plants greater call for lilies and spiræas. Supply larger and of better quality.

LONDON, ONT.—Much larger. Harrisii and spirea were chiefly called for in pot plants and roses in cut flowers. Prices same except on fine roses which were a little higher. Quality about same but quantity greater.

WILLIMANTIC, CONN.—Larger. Less call for hyacinths. Prices about same. More plants rented for church decoration. Home lilies were a failure. Roses bought cheaper than ever before at Easter. Large sales of carnations.

OTTAWA, ONT.—About the same. Increased call for roses, less for lilies. Prices rather lower owing to sharp competition. Demand for flowers and plants about the same, except for lilies. Supply better both in quantity and quality.

BATIMORE.—Much larger. Increased call for Harrisii. Prices much the same, perhaps a trifle higher. Increase in demand outran increase in supply. The use of flowers is increasing annually both in residences and churches.

PORTSMOUTH, N. H.—Equal. Increased call for lilies. Prices about same. Supply larger. The most troublesome thing at Easter (and at all times) is to fix a mutually satisfactory price for the rental of plants. What basis is there?

NEWBURYPORT, MASS.—About 15% larger. An increased call for roses. Prices on roses were lower than ever before at Easter. Increased sales of flowers; plants about same. Supply about same as last year. Quality of lilies rather inferior.

WATERBURY, CONN.—About same. Increasing steady demand for carnations. Prices for Harrisii a little less, for carnations a little more. Steady increase in call for plants. Only half a supply of carnations and not over good at that.

DALLAS, TEXAS.—About 50% increase. More call for lilies, both cut and in pots. Prices about same. Quality of stock was good. Lilies were a little late. Had to buy heavily from a distance. Plants very scarce here. Good opening for a grower.

NEW BEDFORD, MASS.—About 25% increase. More call for roses and pinks. Prices one-third less. Larger demand for Harrisii on account of low price. Supply about same. Low prices cleaned out everything. Lilies sold for half the price asked last year.

KANSAS CITY.—At least 25% increase. More call for lilies—all kinds of flowers sold well, everything loose. Increase in call for plants was mainly in lilies. Sold for $1.50 each and not enough to go round at that price. All stock was in much better condition.

RICHMOND, VA.—Much larger. Increased call for roses, valley and finer kinds of violets. Prices better. Supply was not nearly equal to demand. Weather was pleasant, while last year snow fell all day Saturday. Sales of plants and flowers in usual proportions.

MEADVILLE, PA.—Increase of about 25%. Increased call for everything, especially roses, carnations, violets and valley. Prices same. Greater demand for blooming plants in small pots. Supply larger and quality better. The beautiful weather helped sales, especially of plants.

NORWICH, CONN.—Very much larger. Increased call for lilies, violets and carnations. Prices a trifle higher. Increased call for plants, especially lilies. Supply better every way. A lot of pansies and small flowering plants were disposed of to be given to Sunday school scholars.

NEW HAVEN, CONN.—Fully 25% greater. Could not get enough Harrisii lilies and azaleas to supply the demand. Prices about same. Not so much call for roses but more for carnations, violets and cheaper stuff. Could not get enough pinks, tea roses, Von Sions and jonquils.

READING, PA.—Slight increase. More call for callas, Harrisii and azaleas, less for tulips, hyacinths and daffodils. Prices about same. Larger demand for blooming plants. Supply larger. Quality of carnations fine, of roses not so good. The great heat previous to Easter made roses small.

ST. LOUIS.—About 25% increase. More call for Harrisii and fine roses, less for callas. Prices about the same. More demand for flowers than plants. Supply larger and quality better. The practice of making presents of blooming plants is growing as an Easter custom as it is also at Christmas.

COUNCIL BLUFFS, IA.—25% larger. Increased call for Harrisii and less for p. w. narcissus and Roman hyacinths. Prices about same. Supply better. Weather very bad all through February and March. Worst have had in 15 years. Surprised that sales were so good under the circumstances.

BRIDGEPORT, CONN.—About 30 % larger. Increased call for carnations, violets and all kinds of roses, especially Bon Silenes and Jacqs. No change in prices. Increase was entirely in cut flowers. Supply larger and of better quality, but not enough roses and carnations. Too much bulbous stuff.

NEW LONDON, CONN.—About one-third larger. Increased demand for lilies in pots. Prices about same. Increased sales of loose flowers in small lots. Supply larger, quality about same. Bulbous stuff of all kinds went like hot cakes. More of lilies and flowering plants and less of large palms for the churches.

PATERSON, N. J.—About 25% larger. Increase in sales of Harrisii and palms. In retail prices the tendency was apparently downward. Demand for cut flowers much in excess of supply. Quality excellent. The downward tendency of prices for pot plants at Easter is doubtless owing to excessive competition.

SPRINGFIELD, ILL.—Very much larger. Lilies sold best. Spireas, cinerarias and azaleas sold well. But very little call for hydrangeas, callas and bulbous stock. Prices about same. Supply good both in quality and quantity. Lilies were fine and just about equal to demand. More variety of blooming plants find ready sale.

PEORIA, ILL.—Larger. Increase for lilies, less for spirea. Prices about same. Quality better, quantity about same. J.

POPPIES.

C. Murray had the finest lot of Harrisiis ever seen here. Easter being late all the florists seemed to have their plants in on time. The trade during Lent was unusually good this year. Plant trade promises fair.

PITTSBURG.—Increase of about 30%. Greater demand for lilies, violets, tulips, hyacinths and other spring flowers. Prices higher on roses, about the same on other flowers. Demand less for plants and more for flowers. Quality of both was better. One firm had to lock the doors at 4 p. m. to keep out the crowd, letting them in a few at a time.

DES MOINES, IA.—One third larger. Bulb stock, roses, carnations and Harrisiis in greatest demand. Prices lower—no advance over regular prices. Not much call for plants outside of lilies. Supply good, quality poor owing to continued cloudy weather. Prices not being advanced many people bought who do not usually buy at Easter. Quick sales and small profits.

BUFFALO.—Increase of 20 to 25%. Greater demand for carnations and violets, less for tulips, narcissus, etc. Roses a trifle cheaper, other stock about same. Increase in call for good blooming plants. Supply better in all lines. Moderate sized and moderate priced roses, good carnations and a pretty little plant costing from 75 cents to $1 was the call of the million.

PORTLAND, ME.—One florist reports an increase of one sixth and another a decrease of one fourth. Both report more call for loose flowers and less for designs. Also prices about same, and the supply larger and of better quality, though one makes an exception of lilies. One complains that the market was overstocked with stale flowers from Boston in the hands of venders.

HAMILTON, ONT.—About 20% increase. More call for Harrisii in pots, pot roses and good hydrangeas. Prices about same. Greater demand for good flowering plants and first class roses and carnations. Supply short on roses and carnations; the lilies and mixed stuff was about equal to demand. Greater demand for presentation baskets than for some years past and for a higher grade of stuff.

INDIANAPOLIS, IND.—Increase of about 25%. More call for callas, roses and carnations, less for Harrisii. Prices about 25 to 40% lower on roses and about 20% lower on other stuff. Blooming plants of all kinds sold well, except geraniums and cheap stuff. Supply somewhat better than last year. Stock was good; roses and callas short; a big over-supply of bulbous stuff. Very few designs and baskets made up. Mostly boxes of loose flowers. Fine weather resulted in many flowers being worn on the street.

MONTREAL.—About one third larger. Increased call for loose flowers, hardly any made-up work. Everything was sold, both plants and flowers. Prices about the same. Demand for flowering plants is ever increasing but supply is very limited here at Easter. One florist reports more call for hydrangeas and less for lilies. Supply was better both in quantity and quality. General feeling is that it was best Easter we ever had. It is thought by several that a large plant growing establishment would be a profitable institution here.

PHILADELPHIA.—Pennock Bros. report: "About one fifth increase on plants. Increased demand for lilies and azaleas. Prices about same all through. Proportion of plants and flowers sold about the same. A falling off in sales of hydrangeas. Plants plentiful. Supply of cut flowers, especially roses and violets, was short. More cut flowers and plants used than ever before. Demand for plants unusually good. Was never busier." The Floral Exchange says: "20% greater. Retail prices 30% lower, wholesale prices also lower. More plants sold by us, especially lilies, *pink* hydrangeas and *pink* azaleas. Flowers scarcer than last Easter, especially roses, caused by rainy weather. Quality good."

Poppies.

Poppies are summer flowers and blossoms of the outdoor garden rather than the greenhouse. They consist of two distinct types: namely, annual and perennial and some of the latter thrive best when treated as biennials.

Seedsmen take kindly to all manner of showy poppies because they are easily grown, sure to bloom and give satisfaction to their customers; and they ripen seeds abundantly. They lean most heavily upon the annuals. Plant merchants handle the perennial sorts as Papaver Orientale and its varieties, also pilosum and nudicaule, and ignore the annuals.

As poppies bloom in summer, the off-season with the cut-flower florists, they never have been made as much of as their brightness, fullness and beauty warrant. A good deal of this neglect is owing to their being imperfectly understood, also to a current notion, "you seize the flower, its bloom is shed." But a great deal more use can be made of poppy flowers than is generally done. We can have them in quantity from the first of June to the middle of July. And as regards their lasting nature, if they are cut just before they open, they can be kept very well for two or three days, but if allowed to open full before being cut their life as cut flowers almost fits the quotation.

The nudicaule poppies blossom in May and June, and the Orientals in June. The annual sorts come into bloom from the end of May till the end of July, according to when they were sown. They are very hardy. Sown early in fall they make nice plants that survive our winters very well and blossom early in summer. Sown early in spring they bloom from the end of June through July. I sow them about the end of March or first of April, just as soon as we can work the ground, and at the same time as we sow early mignonette and sweet peas. For earlier work I raise a lot of them in pots in the greenhouse; from flats they transplant poorly, from pots perfectly.

The large double poppies are garden forms of Papaver somniferum, the opium poppy and known as pæonia-flowered, Mikado, The Bride, The Swan, and so on. Ranunculus-flowered poppies are double varieties of the European corn poppy, but of recent years fashion has declared in favor of the Shirley poppies which are exceedingly beautiful varieties of many delicate colors, and never double. Other species as Papaver umbrosum, P. lævigatum, P. pavonium, and P. glaucum are much esteemed in gardens. These last named poppies intercross with much freedom and soon loose their specific identity, but the pæonia-flowered poppies do not cross readily with them. All perennial species hold to themselves rather strictly.

Annual poppies self-sow themselves very freely; the young plants appear early in the fall and live over winter perfectly. A field of poppies in a seed farm in July is one of the most dazzling bits of flower-color I have ever seen. WM FALCONER.

SEVERE LOSSES of glass by hail are reported from Kansas City, Mo., Paris, Texas, and and Martin's Ferry, Ohio.

DIRECTORY CORRECTION.—Change the address of Jos. Bennett, Montreal, Quebec, from 392 to 2392 St. Catherine street.

Plant Notes.

Many handsome flowering plants that once occupied quite prominent places appear to have been dropped of late years, at least among commercial growers, and doubtless with sufficient reason in many cases, for it does not pay to occupy space with dead stock in these days of close competition.

There are, however, many among the old fashioned favorites that deserve to be disinterred from their temporary oblivion and if well handled would probably pay for the trouble and also encourage a demand for others of similar character.

Among such may be mentioned those formerly known as rogieras, though now included in the rondeletias in the revised version.

Of these the old but very pretty R. gratissima is among the best, this being a sturdy growing shrub with opposite ovate leaves of leathery texture and produces large trusses of pale pink flowers that bear some resemblance to those of an ixora. It is a very free flowering plant and needs only moderate heat, say from 50° to 60°.

Propagation is effected by means of cuttings, there being no special difficulty in rooting these providing they are placed in a warm house. No special mixture of soil is necessary for these plants, though the old method was to pot them chiefly in peat, but this is not absolutely essential, and as a matter of fact almost any light well drained soil will be found suitable.

Another good species is R. thrysoidea, which is of somewhat similar general appearance to the preceding, but produces axillary trusses usually containing a less number of flowers than those of R. gratissima, and also of different color.

These rondeletias are somewhat liable to have a straggling habit unless this is corrected by more or less pruning after the flowering season is over, or at such other times as may be necessary.

Chorozema cordata has been referred to in the FLORIST at various times, but its merits deserve another reference, and if nicely grown in about 6-inch pots would probably find an opening among plants for Easter and other decorations, its slender but wiry branches terminating in a showy raceme of pea-shaped flowers of bright orange and red.

Chorozema cordata is of graceful habit and may be pinched into shape at any time previous to the formation of the flower buds in the same manner as a cytisus and may be increased by cuttings or seeds, the latter being produced quite freely by old specimens.

Meyenia erecta is a warm house flowering plant of considerable beauty and also extremely easy to manage. It is of shrubby growth and produces bright blue flowers from the axils of the leaves in great profusion.

Unfortunately meyenia flowers are of but little value for cutting, and consequently can only be depended on for conservatory decoration or other work in which but little handling is required.

There is also a white variety of the above plant, similar in all respects except color of the flowers, and like the type is easily rooted and grown in a temperature of 60° to 65°.

Years ago the old Daphne indica (or D. odora as it was sometimes called) was frequently seen grown among camellias, either in pots or planted out, and so long as a single truss of flowers remained in the house its presence would be indicated at once by its powerful perfume, but of late years the perfume of the daphne is seldom encountered, and its compact heads of waxy looking flowers are seldom seen.

Either the white flowered or the rosy variety is worthy of cultivation and the blooms are freely produced in winter and spring, while the only special care necessary in their cultivation is not to give too much water in winter, and provide other conditions such as would be suitable for camellias. Cuttings should be of firm young wood and should be handled in the same manner as those of azaleas, and will take about as long to root.

W. H. TAPLIN.

Watering Roses.

I can not understand why so many people when writing on rose culture should lay such stress on careful watering, and that it is better to be on the safe side, which would be the dry side, etc. My experience has been that it is pretty hard to give a rose that is healthy and vigorous too much water, providing it is only watered once in 24 hours.

Last year while at my old place at Lansdowne, Pa., I made an experiment with a small bench of Mermets. This bench was at the end of the greenhouse against the shed and in winter time never saw the sun till 10:30 or 11 a. m. This was the last bench planted on the whole place and consequently the plants were what we term culls. I gave strict orders that every day this small bench should receive a thorough watering until the water ran freely through the bench. In other words I was trying to kill the roses with water. But notwithstanding the poor situation this bench was in for this experiment, the plants averaged better and healthier than those that were in the full sun the whole of the day and were carefully watered, or watered whenever they got dry. Many florists around Philadelphia can substantiate this, as whenever they favored us with a visit I drew their attention to this bench, that was generally in the condition of mud. The soil used was a heavy clay loam.

Mr. Chas. S. Price is one of the most successful rose growers in the vicinity of Philadelphia, and probably nine out of every ten visitors have noticed that his rose beds are always saturated with water. In fact any one can pick up a handful of soil and squeeze the water through their fingers.

I think that in every instance that has come under my notice where roses have appeared to be over-watered it has been first caused by a sudden check through being dry at the root. Take a rose that is growing freely and let it suffer for want of water for 24 hours; the flow of sap is checked. Then comes a heavy dose of water; the sap is going the wrong way to take the water up and in about a week the leaves turn yellow and your bed appears wet. Then comes the cry "the bed has been over-watered," when as a matter of fact it has been caused by being too dry.

I am satisfied in my mind that it is safer to be on the wet side, providing the rose is growing freely and in a healthy condition. Water is the best friend I have in growing roses and I use lots of it.

I have sent you a few roses Mr. Editor, that have been grown under this plenty of water treatment and would like to know how they compare with those you have seen that are grown under the safe side dry system. W. W. COLES.

Kokomo, Ind.

[The roses sent were certainly excellent and compared favorably with the best in the market.—ED.]

Roses on Benches More than One Year.

It would doubtless be of interest to many readers, if one of our noted rose-growers would state which varieties of roses can profitably be grown two or more years in succession on raised benches. Niphetos usually flowers better when over one year old, but how is it with Sunset, Hoste and others? The writer has a fine bench of Hoste which has done exceedingly well the last winter. Is there any chance for them to do as well the next winter. D.

Cypripedium Elliottianum.

A remarkable variety of this beautiful cypripede is now flowering in the Graves collection at Orange, N. J. Its blossoms are unusually large and the markings very vivid. The photo sent shows the flowers two thirds of their natural size. The plant has two growths, is in vigorous health, and the flowers will undoubtedly improve as the plant gains strength. Four flowers on an individual spike have already been produced on cultivated plants. It was introduced some four years ago by Sander & Co. and named in honor of Wm. Elliott of New York City.

In habit the plant closely resembles C. Stonei and when once established proves a free grower. The dorsal sepal of this variety measures two inches across and is flat, white, with numerous dark red lines; the petals measure six inches in length and are broad at the base and narrowed to a deflexed point marked with crimson spots and lines; the pouch or lip closely resembles that of C. Stonei in shape, the coloring however is darker; a very distinctive feature also is the peculiar formation of the staminode, which is covered with bluish hairs; the inferior sepal, unlike many other cypripedes, is broad and flat, with lines of a fine purple color which add much to its beauty.

Fibrous peat together with a portion of loam with a clear drainage is a good compost for the plant, with a temperature of 65° to 70° during the growing season; a few degrees higher with sun heat will also prove beneficial. A. DIMMOCK.

New York.

Packing Decorative Plants and Orchids for Shipment.

[*Read before the New Jersey Social Florists' Club April 7.*]

Writing about how to pack plants I find more difficult than to do the actual work of packing; but, as I have been called upon to give a paper on this subject I will give you what I have found to be the most convenient and safest way to pack plants during the cold weather.

In packing palms, such as arecas or kentias, always commence on the outside and work towards the center. By doing this you will have more room to work and will not be so liable to break the plant. After seeing that the plant is clean and free from scale you may commence

CYPRIPEDIUM ELLIOTTIANUM.

[TWO-THIRDS NATURAL SIZE.]

by tying the pinnæ to the center rib of the leaf, starting at the bottom and working upwards until the leaves are all tied up. When all the leaves are tied up as described then tie all the leaves together. If the stems are strong it is best to tie two or three together, commencing in the center; by doing this you will equalize the strain which otherwise would damage a leaf if not spoil the plant. You now have the plant tied up, the next thing to do is to stake it, which is in most cases a very important matter. For this I prefer a bamboo, as they are light and strong. Press the stake into the soil keeping it as near upright as possible, then secure plant and stake, tying both together, wrap the plant all over in paper, tie securely, next put on a cover of cotton batting, tying it on, then put on the final covering of strong paper, tie securely and the plant is finished. If the plant is going a long distance and is likely to be two or three days on the journey it is best for the packer to use his own judgment and put on extra paper for the final covering. You will find it is cheaper in the end, and what is more to the point, it gives greater satisfaction to the buyer to receive his plants in good condition than for them to be partly frozen.

This way of packing will serve in all cases of palms such as areca, cocos, rhapis, seaforthia, kentia, ptychosperma and oreodoxa. Other palms to be packed in a different way are latanias and all palms with broad or palmate leaves. On account of their leaves it is not safe to tie them up as you would an areca. Commence by tying the stems so that the leaves are flat; secure all leaves in this way and then stake your plant; in doing this you must use two good stakes, tying an extra piece of stick across the top of the stakes to give the required width, secure all stakes, pass a few ties around stakes and plant and cover as recommended for the arecas. This packing with two stakes can be done with success for palms such as latanias, ceroxylon, corypha, livistona and phœnicophorium.

In packing stove plants such as cyanophyllum or spærogyne great care must at all times be exercised, for by bending the leaf a little too much it will break off and the plant is ruined—except for the propagating house. In packing a cyanophyllum measure the height of the plant and cut the stakes accordingly. Use two stakes with a cross piece, stake your plant so that the leaves are flat; before tying up the leaves place between each pair of leaves a piece of oil paper to prevent one leaf touching or rubbing against the other, tie up each pair of leaves separately, cover with tissue paper, then cotton batting and last, but not least, put on the covering of strong paper. Anthuriums and caladiums can be packed in this manner, but as their leaves can not with safety be turned up it is best to draw them all into the center still keeping them flat and pack as you would a cyanophyllum.

The plant I have had most trouble with and which requires the most care in packing is Bertolonia Van Houtteii, on account of its short and tender stems; but to do away with all difficulty I have found it best to use four stakes and let the plant remain as near in its natural growing position as possible. After securing the stakes wrap up the whole plant in either oil or tissue paper, cover well with cotton batting and finish with a sheet of paper. As the bertolonia is one of the tenderest stove plants we have, great care must be taken in packing to guard against frost.

In packing orchids great care and good judgment is essential. Take, for instance, a plant of Odontoglossum crispum with a spike of flowers varying from 12 to 20 full blooms. to look at such a plant would be enough for most people and, as for packing it, why, it would be simply out of the question. How to pack such a plant is learned by experience and practice only. No one can learn by simply watching an experienced man pack one. It is only after failure that success is achieved. To pack an odontoglossum in flower get a light, strong stake, measure and cut it about two inches longer than the flower spike, wrap the stake in tissue paper and put it as near the center of the plant as possible, securing firmly. After you have secured the stakes and cut some

tissue paper into strips of about one inch wide commence binding the flower spike to the stake. Now is the time to see whether a man can pack an orchid in flower or not. If he is new at packing such a plant he will undoubtedly break off several of the flowers before he is through, but if, as the saying is, "he has been there before" he will bind up the whole flower spike without breaking a petal. Having gotten the flower spike securely fastened to the stake the rest is simple and easy. Get four more stakes, paper them and stick one in each corner of the basket or pot. If in a basket and the stakes are not firm it is well to tie them to the basket and so prevent any chance of a stake getting loose and the flowers being broken. Next cut four sticks to fasten to the top of the stakes. In doing this see that none of the flowers touch the stakes; if they are likely to touch cut the sticks longer and spread out the stakes, thus giving the flowers all the room necessary. Tie the flower stake at the top so that no movement is possible. After satisfying yourself that the stakes are fast wrap the plant up in tissue paper, then cotton batting and strong paper.

Trusting my paper may be of some service to you all, and thanking you all for the time and attention you have given, I beg to remain,

ARTHUR T. CAPARN, manager of the packing and shipping department of Pitcher & Manda, Short Hills, N. J.

Growing Large Blooms.

ED. AM. FLORIST:—We have to-day shipped you a box of carnation blooms and plants. The blooms are Portia, Scarlet Ray (a sport from Portia) and Lamborn; also some unopened buds of Lamborn to illustrate length of stem. We have cut the blooms low enough to illustrate our method of disbudding.

We were troubled with poor Lamborn flowers last year but not this season. Lamborn is grown on a raised bench, in four inches of rich loam, close to the glass. Temperature 60° at night and usual day rise. The soil is kept stirred one half inch deep, and plants are supported by A shaped chicken wire screens between rows. The bed has been constant in bloom since October last with no tendency whatever to crop. Could not call it a profuse bloomer but it is decidedly constant. Its cardinal fault is weak stem and tendency not to open fully in dark weather, but maintaining an even growing temperature and abundant ventilation without bringing direct draughts on the plants will overcome this tendency considerably. It is important to support Lamborn somewhat in order to keep buds from the ground, for if allowed to droop and lie flat they discolor and do not open well.

Lamborn is the most profitable white we grow. We have Lizzie McGowan, but it bursts fearfully so far. We have 2,000 McGowan for next season and shall grow it under different conditions and see if the bursting can not be overcome. It is important to feed Lamborn by dressings of compost or liquid manure (not too strong) as if soil becomes exhausted Lamborn gives out rapidly.

We are of the opinion that carnations may be trained, fed, disbudded and large flowers grown in the same manner as chrysanthemums. We have grown a Lamborn flower 3½ inches across, by such treatment as you would give a chrysanthemum, and we should not be surprised if the same could be developed to four or more inches in diameter. In these extra large flowers the stem seems to be somewhat strengthened by the feeding process. C. W. WARD.

East Moriches, N. Y.

[The blooms of Portia averaged 2 inches in diameter and were borne on stout stems averaging 18 inches in length. The Lamborn flowers averaged a trifle larger, but the stems were not so strong nor quite as long. All were good flowers. Sunray is a Portia splashed with white, the white tinged with the scarlet ground color. The system of disbudding was that described by Mr. Ward in his article on page 820 of last issue. The unopened buds of Lamborn were on stems 18 inches long and the small plants sent, which included seven varieties, were all in excellent condition.—ED.]

New York.

The week following Easter has been a busy one for the retail florists, the number of wedding and other decorations having been unusually large. The quantity of cut flowers required for these occasions, although large, has not been sufficient to postpone the expected tumble in prices beyond the two or three days immediately succeeding Easter Sunday, and in the latter part of the week came the inevitable smash, roses especially being affected. The load of roses sent to the city on Saturday was very heavy, and as bright spring weather has again set in this is probably an indication of what may be expected daily for the next few weeks. Many of the roses coming in are very fine. T. J. Slaughter's American Beauties which go to Burns & Raynor are of extra good quality. Wiegand Bros. are sending to Young Bros. Paul Neyrons, Capt. Christies, Moss Roses and La France which are unexcelled. Ernst Asmus is also doing the Moss Roses grandly. Jacqueminots are abundant and have to be top quality to bring $10 per 100, while the average will not realize over $5. With Jacqs and dark hybrids at such low figures there is not much show for the Meteor now, but Ernst Asmus claims that it pays him better than any other rose, as it has borne heavily all winter, whereas growers depending on Jacqs and hybrids as Wiegand does, get no returns till February and thus lose the best part of the winter. One of the best selling roses now is the Prince Camille de Rohan which goes popularly under the name of "Black Jacq."

Trade was not nearly as brisk on Easter Sunday morning as the great rush on Saturday afternoon would lead one to expect. The only flowers left over were those that were bought in expectation of a big Sunday trade.

All the retail dealers report that it was impossible to serve all the customers who came on Saturday and many were turned away on this account. Butler says it was the biggest Easter trade he ever experienced in both plants and flowers. An unusual feature he noticed was the call for wreaths and crosses for cemetery decoration. According to all accounts this fashion is growing at Easter and it is certainly one worthy of encouragement.

Hafner re-echoes the general complaint that the demand was crowded so into Saturday's rush that he could not begin to attend to all the people who came. There was a general run on cut flowers, all kinds, regardless of color or variety.

Stumpf reports cut flower trade as not quite up to other years, but mainly because everybody wanted to be served at once on Saturday afternoon and it was impossible to accommodate them all. In church decorations, of which he did several, there were but few flowers used, plants being mainly depended upon.

A certain New York florist must have been pretty well tired out after his Easter trade for he went to sleep in front of the stove and when discovered by his wife he was blissfully unconscious of the fact that the fire had already scorched the knees out of his trousers.

Wier, of Brooklyn, was somewhat incommoded by his recent move into new quarters, but found Easter trade generally satisfactory and also noticed the increase in the use of flowers for cemetery memorials.

From all accounts it appears that the calla as an Easter specialty cuts no figure whatever now, and the same is almost as true of the candidum, some of the large dealers not using a single flower of either one of these once popular favorites.

The Flower Market, so called, at Union Square, which is in reality a plant market, is now in full blast and from daybreak till eight o'clock every morning the allotted space is filled with a double row of wagons and a brilliant array of showy blooming plants. While most of the newspaper reports regarding the popularity of this feature with the upper tendom and its drawing power as a "fad" are humbug and idle tales, yet there is no doubt a large trade in bedding plants done here and it makes a convenient location where buyers can meet the growers and personally select their plants, and as the stock is of a description such as retail florists do not care to bother with, it cannot do any especial harm to the regular stores. It is asserted, indeed, that one or two retailers who had stocked up too heavily on Easter plants found this market a very convenient place to dispose of their surplus "incog" of course.

The real flower market is at 34th St. Ferry. Here from a very early hour in the morning until 8 or 9 A. M. is to be found the most happy-go-lucky crowd in the world. At this season of the year especially, when the cut of flowers of all kinds is heavy, the crowd is very large and the scene one well worthy of a visit. Willie Siebrecht, Johnnie Weir, and a few such notables talk in the English language, but the language which seems to be most prevalent is "Greek." The courtesies of the place are very Bohemianish and everybody looks out for number one and takes care of himself. Just now the quantity of callas, Harrisii, carnations, etc., brought to this market is enormous, and when the baskets and boxes are all spread out for inspection it is next to impossible to move about.

Violets are about out of the market for the season. Young Bros. are receiving the only stock of them that is coming in. These are of good quality but a few warm days will soon shorten them up.

Ernst Asmus has returned from Florida thoroughly recuperated and apparently as well as ever. He had a good time hunting and fishing. Just now he is after a different kind of game, viz., three varieties of worms: eel worms, army worms and rollers, which seem to give him plenty to do to keep up with the game, and there is no "close season." The army

worm is in one house of carnations only. He ensconces himself snugly among the petals of the carnations where his presence is only made known when he has chewed up half the flower.

August Rolker & Sons report largely increased sales of the paper flower pots, especially in 3½ and 4-in. sizes, many of those who bought last year doubling up their orders this season. The pot seems from past experience to be remarkably successful with bulbs, hyacinths, lily of the valley, etc., and verbenas do splendidly in it. Geraniums do not appear to take kindly to it. Market gardeners use it largely for tomato and cabbage plants, both of which do well in it and are in a convenient shape for retail trade or shipping.

The usual display of pansies and daisies in the large vases in front of the hotels and other establishments is now to be seen, and the tulips in the various parks and squares are beginning to look brilliant. A border of pink and white hyacinths around the basin in Union Square is surrounded all day by admiring visitors.

Three Broadway florist's stores are to be vacated on May 1, Bebus, Ekirch and Nugent. The former goes into the wholesale business and the two latter will probably locate elsewhere.

Pitcher & Manda had a fine stock of forced pæony flowers for Easter.

Owing to the late spring, nurserymen are still delivering the hardy stuff, a branch of the trade usually over by this time.

Among the many weddings of Easter week, one new idea was the use of a cornucopia of roses instead of the time-honored wedding bell. Another pretty thing was a bower of genista. All the decorations showed that either white and gold, or white and pink, were the leading colors.

Philadelphia.

The past week was Quaker week. It rained of course, it always does Quaker week. It is said of the Quaker sect that they are very economical and in holding their annual meeting they always choose the third week in April as it is pretty sure to be stormy, and in attending meeting no time is lost as no work could be done outside in such weather. Whether this is true or not it rained nearly the whole week and the Quakers got the blame for it.

Despite the weather, however, business has been very good, all the florists being busy and seeming to have about all the business they cared for. There were a great many weddings and at a number of these the decorations were quite elaborate.

Good roses of all kinds were very scarce, especially was this the case with Brunners. Mr. G. Brunner Anderson (he parts his name in the middle now) was a much respected man, both this week and last, as he had this part of the market all to himself, his large Brunner house being in just at the right time. He says he had no idea that the dealers were such a wicked set, for he says they would make all sorts of statements without regard to the truth if they could only by this means get another half dozen roses added to their order. The price was 50 cents instead of 40 as quoted last week. Roses this week are cheaper, the fancies bringing 5 to 8, hybrids 30 to 50, Perles, Gontiers 4 to 5, Jacqs 10 to 15, carnations 2 to 2½, valley 3 to 4, and the same for other bulbous stuff.

One of the quickest selling plants at Easter was the pelargonium. Karl Miller had an early pink variety in full flower and the plants sold on sight. This plant, for a late Easter, is just the thing and a great many of them could be sold if well grown.

At the regular monthly meeting of the Pennsylvania Horticultural Society held April 19 Mr. Charles Miller read a paper on "Landscape gardening as an art," which was very interesting, as was also one read by Mr. John Bell on "Spring flowers."

On Eleventh street, or Eleventh avenue as the inhabitants like to speak of it, they put their soul into the work as it were. If a man is engaged on a funeral design his countenance bears a very solemn look, any sign of frivolity disturbs him and interferes with his work, while the man at the other end of the bench making up a wedding bell is all smiles and looks as happy as if he were to stand under the bell himself.

There was not much rolling at the alleys for the past two weeks, but a new contest for a valuable prize will be commenced on Wednesday the 27th. As the first six in the order they stand at the close of the match, which will be about the first of August, will probably go to Washington, there will be a great effort to get up front and stay there. New pins will be ready for this match and it is quite likely to bring out some dark horses not now thought of. K.

I did not notice any novelties among the flowering plants at Easter. There may have been some but I did not see them nor was my attention drawn to any.

When the double lilacs become sufficiently plentiful to use for this purpose, they will be highly appreciated, I have no doubt.

The hot weather we had a few weeks ago, hurried the crops of roses along so rapidly that most of them were almost clean off at Easter. Hybrids showed the effects the most.

Several hundreds of Cypripedium Lawrenceanum came in opportunely to assist in helping out the rose.

In nearly all the stores I noticed quite a number of the "Grape Hyacinth" (Muscari botryoides) sometimes called "Blue Bottle." These, it was stated, were found growing in a wild state near Chestnut Hill, having probably escaped from cultivation. They are quite pretty.

The dainty sweet peas are becoming plentiful. I cannot understand why the variety called "Painted Lady" is grown for cut flowers. It is a striped variety, but the combination is not at all pleasing. The White, and Blanche Ferry, and Butterfly seem to be the favorites. L.

Boston.

When Easter was past it was found that there was was but little stock in the hands of either growers or wholesalers. The retailers had more or less on hand, the result of a sanguine feeling which took possession of them on Saturday afternoon. Up to that time they had bought cautiously. The sudden rush on Saturday made them hopeful of a big demand on Sunday morning but it did not materialize and, Sunday was unaccountably dull.

The slight overstock did no harm however as on Monday there was a big scarcity in wholesale circles and as everything had been cut close as possible the scarcity continued into the week, and it was not until Friday that flowers commenced to stick a little and prices began to drop from their Easter elevation.

Roses and carnations were quite scarce, the latter very much so, in fact, and ten to twelve dollars per hundred for Mermets and Brides, and three to four dollars for carnations any color, were the ruling prices.

At the last minute lilies were quite scarce for Easter. Saturday evening's demand cleared them out completely. This was true also of lily plants, many more of which might have been disposed of. Hydrangeas did not fare as well as the lilies and there were a good many left over. They do not seem to quite strike the Easter fancy.

A gratifying fact was the manner in which confectioners, jewellers and dealers in fancy goods generally decorated their windows with flowering plants, a most pleasing and sensible advance on the squatting plaster of paris rabbits with plethoric eggs suspended from their ears, which have hitherto been regarded as the appropriate Easter adornment.

Violets are about done for the season. Very few are coming in and those that are are very poor. Heath also is entirely cleaned up, and there are but few daffodils in the market. For specialities there are coreopsis in several varieties. English primroses of extra quality, myosotis, sweet peas and moss rose buds. There are enormous quantities of pansies coming in and the quality is superb.

Jacqs are plenty and there is a good supply of Brunners and other hybrids, but of Mermets and Brides of best quality there are none too many. White stocks and mignonette are the only overstock and no one wants these at any price.

There were no specially notable decorations in the churches here. Banks and groups of palms, lilies, hydrangeas, etc., were to be seen in every church, no matter what denomination, but very little attempt at festooning or cut flower decoration was to be seen, with the exception of crosses of lilies which appeared to be a favorite center piece almost everywhere.

The Public Garden is ablaze with hyacinths and narcissus.

David Allan has a fine batch of Dendrobium Dalhousianum in bloom. The length and size of flower spikes is unusual.

At the meeting of the Gardeners' & Florists' Club on Tuesday, May 3, Prof. G. L. Goodale of Havard Botanic Garden will deliver a lecture on "Famous Gardens of the World". The lecture will be illustrated by means of the stereopticon, the views shown having been collected by Prof. Goodale during his recent trip abroad. All gardeners and florists are invited to attend, with their ladies.

Baltimore.

There's always a calm in the center of a hurricane, meteorologists tell us, and that is probably what causes the dullness in the market this week. It is a fortunate thing in some respects though for it enables the dealer to collect his scattered senses, and some of his bills, before the full force of the spring trade is upon him. It is no hardship to the grower either for after cleaning up all his flowers for Easter, he finds a few days of slow sales very useful in getting up a fresh stock.

The weather has been very disagreeable, so much so as to keep ladies indoors most of the week, and interfere with the events of society to a very considerable extent; this has undoubtedly had some effect on the sales, but not so much as the quantities of flowers purchased last week, which must be allowed a few days to fade out of the vases and memories of purchasers.

Prices have settled down to pre-Easter figures; violets have about dropped out of the list, and the quality of all other stuff is generally "off". The demand for plants is increasing steadily and a few days more, if fair, will see roses, geraniums etc., in brisk demand.

Dutch bulbs in the various squares are showing up beautifully, and though not yet in full bloom, are sufficiently open to please all eyes with their gaudy colors. They seem generally finer than usual in spite of the severe and very changeable weather of the past winter. MACK.

The Nursery Trade.

The Silva of North America.

This is the magnificent and exhaustive work on the trees of North America north of Mexico, being gotten up by Professor C. S. Sargent, Director of the Arnold Arboretum. The book will be complete in 12 vols. the first three of which have now been published. Each vol. costs $25, and the price of the work complete is $300. This great cost places it beyond the reach of many of us who are interested in trees, and not a few, like myself, must be content to borrow the book.

Every nurseryman is interested in trees, hence in the contents of this book, for not only does it deal fully with all the trees of this country, but, incidentally in the text and in copious foot-notes it deals broadly and interestingly with many exotic species and varieties akin to the American ones under consideration. Those of us who aspire to keeping posted in our business are compelled to consult this work, for *it is the law in the science of our trees and their correct nomenclature.*

Vol. III is fresh from the press. It is confined to two natural orders of plants: namely, Anacardiaceæ, the order to which sumachs belong, and Leguminosæ, the order in which locust trees, redbuds and acacias are included. Of the first named order two genera: namely, Cotinus and Rhus, and six species are represented; and of leguminous trees seventeen genera and thirty species are given. There are fifty full page plates in which the flowers and their analysis and the leaves and fruit of every species are most accurately portrayed.

Now let us consider some of the text that may be of practical interest to us.

COTINUS COTINUS is the name by which we shall henceforth know the Venetian sumach, or smoke tree, Rhus Cotinus.

COTINUS AMERICANUS is the American prototype of the Venetian sumach and which has made quite a little stir among us during the last few years. We used to know it as Rhus cotinoides. As a decorative shrub it is inferior I believe to the ordinary smoke tree. It seems to be perfectly hardy with us, but I am informed it is not hardy at Boston.

OF THE GENUS RHUS we are told over a hundred species are distinguished, 16 or 17 of which occur within the territory of the United States. Rhus semialata is a handsome small tree from China and Japan and its foliage is reputed to assume orange and scarlet tints in fall. We have a fine tree of it, but yellow is as far as its leaves get.

RHUS VERNICIFERA is the laquer tree of China and Japan. The poison ivy (R. Toxicodendron) is indigenous to both the United States and Japan. R. lucida, a native of South Africa, is used as a hedge plant in countries bordering the Mediterranean, and why not in our Pacific and Gulf states? R. Metopium is a small tree in Florida. The staghorn sumach (R. typhina) is recommended to the planter on account of its excellent habit, ample and brilliantly colored foliage, large panicles of male flowers and its brilliant fruit. R. copallina, the prettiest and most spreading of all sumachs, is said to be a capital thing to plant on dry hillsides. There are narrow-leaved, white-flowered and other natural varieties of it. The name of the poison dogwood has been changed from R. venenata to R. Vernix. Mahogany is a name given to a small tree (R. integrifolia) found near the shores of Southern California.

ROBINA PSEUDACACIA is the common or yellow locust. Thirty varieties of it are recognized in gardens. One without any stipular spines is called inermis, and is planted in Europe for fodder; it yields two crops of young branches a year. Another named Decaisneana has rose colored flowers. The variety umbraculifera is the parasol acacia of European gardens. We have tried several of these varieties, the parasol among them, but they become infested to destruction with Cyllene robiniæ, the locust borer.

ROBINIA NEO-MEXICANO is a small tree. It is very thorny and quite hardy with us, but not promising as a decorative plant.

ROBINIA BELLA ROSEA of gardens is a supposed hybrid between the yellow locust and the clammy locust.

ROBINIA VISCOSA, the clammy locust, although widely naturalized is exceedingly rare in a true wild state, and nowhere known as such except near Highlands, N. C.

OLNEYA TESOTA is, when in bloom, the most beautiful tree of the arid regions of the Southwest; but all attempts to successfully introduce it to cultivation have failed. It has large bright purple pea flowers in short axillary racemes.

ICHTHYOMETHIA PISCIPULA, commonly called Jamaica dogwood, is a small tree of Southern Florida, and very handsome and conspicuous when in bloom. Its flowers are white tinged with red and borne in ample axillary panicles.

CLADRASTIS LUTEA.—This is the now accepted name of our magnificent yellow wood. It used to be called Cladrastis tinctoria, also Virgilia lutea. And the Asiatic tree we have long known as Cladrastis Amurensis has been dropped from the genus and christened Maackia.

IN THE GENUS SOPHORA we are told there are 22 recognized species. Still, aside from S. Japonica and its weeping form we hardly know it in gardens. Sophora secundiflora, however, a small Texas tree known as coral bean, is highly recommended for cultivation wherever the climate is mild enough. "Its lustrous, persistent foliage, large and fragrant flowers, conspicuous fruit, and brilliant seed make it a desirable garden plant." S. affinis from Arkansas and Texas was "introduced to cultivation in 1890." We have it, and it keeps alive outdoors, but is so unhappy that I am convinced it will not avail us in the north.

GYMNOCLADUS DIOICUS is the name we get for the Kentucky Coffee tree we used to know as G. Canadensis. We are informed that it is propagated by seeds, which are sparingly produced, and which sometimes do not germinate for two or three years, and more easily and quickly from pieces of the root. Another species, namely, G. Chinensis, occurs in Southern China.

GLEDITSIA TRIACANTHOS, the honey locust. It is recommended as a capital tree for drouth and dirt in cities, and one that isn't particular as to soil anywhere. Further, "The pistillate trees are more desirable than the staminate ones for ornamental plantings, as the fruit which hangs in great profusion from all the branches is conspicuous and beautiful from midsummer till it falls. The only sure way of obtaining it is by grafting seedling plants with grafts taken from trees known to bear female flowers." While I admit that the honey locust is one of the most symmetrical and elegant trees cultivated and will thrive most anywhere, even close by the seaside, on account of its villainous spines I'd never recommend it as a street tree nor to plant close to one's house. And the great profusion of its dangling bean pods which the eminent author considers so meritorious I regard as a particular objection in streets or well kept gardens or near residences because of their perpetual litter from October to April. This is very well in the forest or park but not in the garden.

THE WATER LOCUST or one-spined locust of the Southern Atlantic States, and which we used to know as Gleditschia monosperma is now called G. aquatica. It is not hardy in the north.

PARKINSONIA ACULEATA is a small tree found in Southern Texas, and widely naturalized in tropical countries where it is used for hedges, "its indifference to heat and drouth making it valuable for this purpose." The young branches of another species (P. microphylla) is used for fodder in the islands of the Gulf of California.

OF CERCIS, OR REDBUD, seven species are mentioned. C. Seliquastrum of Southern Europe is the type; C. Griffithii comes from Afghanistan, C. racemosa from China, C. Chinesis from China and Japan, C. occidentalis, a shrub, from the foothills of the California Sierras, and our two aborescent species, namely, C. Canadensis, the common redbud, and C. Texensis a small slender tree of Texas and Mexico.

PROSOPSIS JULIFLORA is the mesquite of the southwest, the most important leguminous tree of North America. It will thrive under more adverse circumstances than any other tree, and is at home in rich or poor soil, on rocky hillsides, saline flats or sandy dunes. Its taproot goes straight down into the ground 40 feet or more, till it reaches water and radiating horizontal roots spread out from it in all directions. The nearer the water is to the surface of the ground the more vigorous are the trees. Its seed pods are favorite and nutritious food for man and beast. It is easily raised from seed, and makes a capital hedge plant in warm countries.

THE MIMOSA (Leucæna pulverulenta) indigenous to the Rio Grande, is the most beautiful of the mimosa-like trees of the United States. Because of its quick growth, clean trunk, graceful feathery foliage and abundant flowers it is occasionally planted for ornament in Southern Texas.

ACACIA.—We are told 432 species are now distinguished and of these 300 are indigenous to Australia. There are three aborescent species in this country, namely, A. Farnesiana, known as cassie, and A. Wrightii and A. Greggii, both called cat's claw. A. Farnesiana is planted for ornament in all warm countries, and cultivated on a large scale in Southern Eu-

rope where its fragrant flowers are used in the manufacture of perfumery.

PITHECOLOBIUM FLEXICAULE, commonly called ebony, is a small tree of the coast of Texas. Its flowers are pale yellow or white in cylindrical spikes, fragrant, abundant, and borne from June to August. Aside from Leucuna pulverulenta and Acacia Farnesiana it is the most beautiful of our mimosa-like trees.

WM. FALCONER.

DENVER COLO.—Stark Bros., the well known nurserymen of Louisiana, Mo., on April 4 purchased the Cutler Ranch, near Littlejohn, for a consideration of $37,000. The firm has owned for several years a 100-acre tract adjoining the Cutler ranch, upon which fruit has been raised without irrigation, the basis of their cultivation being exceedingly deep plowing, the plow being put to a depth of thirty inches in many instances. They have made a success with the 100-acre tract and will try the same process on the 160-acre tract just purchased. The trees for the new land will be sent from the Louisiana nursery and will be cultivated without irrigation, though they bought water rights with the land. Work will be commenced at once. The fruit growers of Colorado will look forward to the ultimate outcome of the work of Stark Brothers, for heretofore it has been thought necessary to have water for irrigation. Their plan of deep plowing has been successful on the 100-acre tract.

ALEXANDER LYNARD, a traveling representative of a Bloomington nursery, has been arrested at Delavan, Ill., for forging a note for $200 at the Auburn State bank.

SAN BERNARDINO county, Cal., expends $1,000 a month on its horticultural commission.

IT IS REPORTED that the January cold killed the lowlands peach buds in Missouri.

News Notes.

CINCINNATI.—H. W. Gardner has sold out.

ANN HARBOR, MICH.—James Toms, one of the oldest florists in the state, died April 19, aged 80 years.

SOUTH BEND, IND.—Mr. A. Beyer, the florist, was recently so unfortunate as to have his right arm broken.

GRAND RAPIDS, MICH.—The spring flower show was very successful. Most of the florists took part.

ATLANTA, GA.—A son of Alexander Brown, the florist, of Jackson, Mich., was recently killed in an accident here.

EAST SAGINAW, MICH.—Wm. Roethke has removed to his new store, which is probably the finest floral store in the state.

BEREA, O.—Mr. J. C. Gooding, formerly of Cleveland, has built greenhouses here and will grow roses for the Cleveland market.

GRAND RAPIDS, MICH.—Geo. Hopp will build two large greenhouses at Reed's Lake and will use the title, the "Reed's Lake Florist."

ROCKFORD, ILL.—The recent storm was very severe in this section. H. W. Buckbee lost about 200 square feet of glass, and considered himself lucky to have had no greater loss.

INDIANAPOLIS, IND.—Mr. L. Swartling, formerly gardener at the Hospital for the Insane, has purchased John Keller's establishment and joined the ranks of the commercial florists.

SCRANTON, PA.—G. R. Clark & Co., made a beautiful display with hydrangeas, tulips, azaleas and other blooming plants at their store in the Y. M. C. A. Building, which attracted crowds of visitors.

PORTSMOUTH, N. H.—A. H. Stacey has bought the greenhouses and land formerly leased by him and will remodel and enlarge the houses to about double their present capacity the coming summer.

CLEVELAND.—P. J. Bauer has taken unto himself a wife. A. Graham has taken the store formerly conducted by J. C. Gooding. Batchelder Bros. are tearing down their old place and building a new one a short distance away.

PROVIDENCE, R. I.—The annual Easter exhibition by Mr. C. M. Kelley at his greenhouses on Waterman St. was very attractive. Hybrid roses, azaleas, Bermuda lilies, daffodils, tulips and hyacinths were shown in large quantities.

ELIZABETH, N. J.—Henry Leahy has in process of erection an extensive range of greenhouses on the block bounded by Chestnut, Walnut and Magnolia Ave, and contemplates by the planting of fine shade trees and shrubbery and other improvements to make a veritable floral park. The location is very convenient for business.

NORWICH, CONN.—The three houses built by G. Geduldig last fall were heated by the overhead system of hot water heating there being two 2-inch flow pipes and ten 1½-inch returns. Mr. Geduldig was much pleased with the work of the apparatus the past winter, being able to get up heat quicker and using less coal than with 3 and 4-inch pipes.

WARREN, O.—Easter trade was excellent and good prices were obtained. Though a town of only 6,000 inhabitants Warren has its crape chaser. Recently a very popular citizen was killed by a boiler explosion and before his body was cold a local florist visited the friends of the dead man soliciting orders for funeral flowers. But the people resented this exhibition of indecent haste and the fellow got only kicks for his pains, while the orders went to other florists who were less enterprising(?) than he.

IN VIEW of the fact that at several conventions of the S. A. F. local photographers other than the one selected to make the usual group photograph, have succeeded in collecting money for photos for which no return was made, it would be well for the Washington people to guard against this by giving to the official photographer some evidence by which he might establish his identity, and then warn members to pay no money to any other photographer.

GREENHOUSE HEATING.

BY A. B. FOWLER.

Explains fully all the best systems of heating greenhouses by both hot water and low-pressure steam. Tells you the points to consider in selecting an apparatus. How to adjust same to various locations; gives the results of the latest scientific experiments Shows how to compute the number of feet of pipe required for a given space; draft and other important matters.

It is highly commended by Mr. John Thorpe and others. Postpaid, 75c.

Sent on receipt of price. Address,

AMERICAN FLORIST,
CHICAGO.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By German gardener just arrived from old country. Has highest German references. Address T E. care American Florist.

SITUATION WANTED—By a reliable, sober man; 9 years' experience in the cut flower and plant trade; 26 years of age. Address
PRACTICAL FLORIST, Niles Centre, Ill.

SITUATION WANTED—As assistant foreman, by a young man who has been through the mill on one of the largest establishments in the U. S. Address METEOR, care American Florist.

SITUATION WANTED—As rose grower, young married man, small family; has had experience at Waban Rose Conservatories and can furnish best of references. Address J W.
67 Bromfield street, Boston.

SITUATION WANTED—By experienced florist and gardener, single, American, age 38, good references if required; understands roses, carnations, bulbs and mum growing; private place preferred. Address H, care American Florist.

SITUATION WANTED—As foreman; well posted in growing roses, carnations, violets and forcing of all kinds of bulbs. Also decorative and bedding plants. Over 20 years' experience. Good references. Address, stating wages, etc ,
FLORIST, 128 La Salle St., room 8, Chicago.

SITUATION WANTED—As foreman or propagator by an experienced grower of palms, ferns, roses, carnations, violets, etc —Chicago preferred No. 1 references; single, German, but capable of the English language; 8 years in the trade. Address
MR. F, cor. Lawnway and Tremont streets.
Fairmount, Cincinnati, Ohio.

SITUATION WANTED—A practical florist, gardener and mushroom grower, with experience in erection of greenhouses and managing the business successfully, desires position about June or July Very best of recommendations Single, age 25. Only a place where hard work and strict attention to duties will be appreciated, wanted. Address, stating full particulars.
B L, care American Florist, Chicago.

WANTED—A first class working florist; fair wages and prompt payment; none but sober men wanted. Address H A L, care American Florist.

WANTED—A practical florist looking for a good location for business, proof profits over $100 per month, home trade should address
TWIN CITIES, care American Florist.

WANTED—A partner in the florist and seed business in one of the best cities in the south, must be a live man with some capital, this is a splendid opening for the right party. For particulars address
J P, care American Florist.

WANTED—A strictly sober and reliable man; must be a good grower of cut flowers of all kinds; a good salesman, and fair knowledge of design work. Apply with references to
R. care American Florist Chicago.

WANTED—A strictly sober man for small commercial place Must be good grower of cut flowers of all kinds, and fair knowledge of design work. Wages $25.00 per month and board. Apply with references to EDW. AUSTIN, Effingham, Ill.

WANTED—At once, a steady, sober and reliable single man; must understand the growing of general stock, and be willing to work under instruction. References required. Wages $25 to $35 per month and board. Address
WM. A BOCK, North Cambridge, Mass.

FOR SALE—OR LEASE—Will lease or sell a growing business, with ample grounds and dwelling; greenhouses consist of about 4,000 feet of glass. Address FLORIST, 709 E. Broad St., Richmond, Va.

FOR SALE.

Nine greenhouses, containing 16,000 feet, of glass, with 8 lots of land, each 40x175 feet elegant dwelling with 11 rooms; barn, wagons, cart, horse and harnesses. The above property is located in one of the most beautiful western cities, within 5 miles of the city hall, within one square of electric and cable cars: the same will be sold cheap, as the owner is not able to run the same himself. The above houses have only been built 5 years; modernly constructed, 12x18 double thick best quality glass; heated by steam; abundance of water both from wells and cisterns. They are filled with palms, ferns, roses, carnations and bedding plants of all descriptions, and all will go with them. Address
J M, care American Florist, Chicago.

VINES.

The above named plants are strong, well-rooted and healthy.

FRANCIS MORAT'S SONS, Florists,
No. 606 Fourth Ave., LOUISVILLE, KY

Davallia Stricta and Areca Lutescens.

Please give the best way of growing Davallia stricta and the treatment required by Areca lutescens. My arecas are turning yellow from some cause.

A.

Davallia stricta requires no special treatment other than such conditions as would be favorable for the growth of Adiantum cuneatum, that is a light soil moderately enriched, a temperature of about 60° at night and moderate shade on the glass at this season.

Areca lutescens may turn yellow from various causes, the most likely being either an unhealthy condition of the roots, or else too low a temperature during the winter, and in either case the trouble may be aggravated by too much water. The essentials for the rapid growth of this palm are a rich well drained soil, a night temperature of 65° to 70°, thorough syringing and some protection from full sunlight during the summer.

W. H. T.

For Spring Potting.

The best time to pot off small Palms and Foliage Plants is NOW, and they will then be ready to fill houses with for summer, after bedding plants are cleared. Cheap plants as follows!

	Per 100
Aralia Sieboldi, 2-inch pots	$10.00
Pandanus utilis, 2-inch pots	10.00
Areca lutescens, 2-inch pots	10.00
Dracæna terminalis, 2-inch pots	8.00
Latania borbonica, seed boxes	4.00
Cocos Weddelliana, seed boxes	8.00
Cocos plumosa, seed boxes	8.00
Asparagus plumosus, 3½-inch pots	40.00
Begonias, tuberous, single, finest flowers, distinct colors	10.00
Begonias, tuberous, double, very fine.	20.00

(Begonias are started, but can be mailed for next three weeks.)

A GREAT LIBRARY.

From a valuable essay delivered recently before the Massachusetts Horticultural Society by Mr. W. E. Endicott, we learn that the library of that society is among those of its class one of the foremost five of the world, while its collection of purely horticultural works is, by far, the finest in existence. The number of plates of plants, fruits, flowers, etc., is estimated at 250,000, and there are not far from 6,300 books and 6000 pamphlets. On the reading desk are to be found fifteen out of nineteen English horticultural periodicals, nine out of ten American, five out of six Belgian, five out of nine French, several Austrian and German, and one each from Ceylon, British Guiana, Italy, Java and the Argentine Confederation, and of many of these the sets are complete up to the present time.

The number of volumes which demand notice for their age, rarity, beauty, costliness or intrinsic value, is so great as to bewilder and amaze any one who shall attempt to select all the noteworthy ones.

By far the most costly work in the library is the Flora Græca of Dr. Sibthorp and James Edward Smith. The expense of its production was no less than $150,000, and only thirty copies of this original edition were sold. It is in ten large volumes and contains 1,000 figures of Grecian plants in their natural size and colors.

Another remarkable production is the Flora Danica. It consists of eighteen volumes containing 3,240 colored plates. The work occupied one hundred and twenty-two years before it was completed.

It would take a volume to describe the many magnificent treasures of which the above are only a sample. Many are the only copies of their kind in America, many are one, two and three, even three hundred and fifty years old, and the number is constantly being added to.

Even all the trade catalogues of the present day are carefully preserved, and publishers of such who have not already done so, will help in the work if they will put the name of the Mass. Hort. Society on their mailing list. A complete card catalogue of the library has been in preparation for some time and is now nearly finished. Mr. Endicott said in closing his paper: "I speak my own mind, and I know I speak the mind of the entire Library Committee and I believe of the Society as well, when I say that we all desire to see the library as fully and as freely used as is consistent with its preservation, that we welcome to its privileges all persons whatsoever who are interested in these subjects, feeling that this is a possession far too precious to be selfish with."

AN AMERICAN ROSE SOCIETY.

The importance of the rose as a factor in the development and expansion of the florist's trade in America will be questioned by none. And that there should be a national organization to supervise the dissemination of new varieties, insure correct nomenclature, and above all to stimulate the production of improved sorts in America all will concede.

We are therefore much pleased to know that the preliminary steps towards the organization of such a society will soon be taken and we predict that the project will meet with enthusiastic support by the rose growers of the country.

The call, which will soon be issued, will bear the names of Messrs. E. G. Hill, J. N. May, M. A. Hunt, Antoine Wintzer, Robert Craig, J. C. Vaughan, Edwin Lonsdale, F. R. Pierson and a host of others equally well known to rose growers.

The new society will encourage the production of new roses in America by offering valuable prizes, in addition to certificates of merit, to American growers of new varieties that show a distinct gain over existing sorts in the same classes.

HARRISII, ROMANS, FREESIAS, VON SIONS, VALLEYS, ETC.

W. W. BARNARD & CO.

6 and 8 North Clark Street, CHICAGO.

Chicago.

Mr. J. A. Pettigrew has recovered from his recent illness and is again in the harness.

Mr. R. Ullrich is also around again though still far from strong.

Among recent visitors to the city were Messrs. E. G. Hill, M. A. Hunt, L. L. May, and representatives of the Holland bulb firms of L. Van Waveren & Co. and G. V. Van Zanten & Co.

It is still impossible to say anything definite about the International Chrysanthemum Show. The matter is yet under consideration and the chances seem favorable for the overcoming of the technicality that stands in the way. A meeting of the executive committee of the Hort. Society was held last Saturday, at which Messrs. E. G. Hill and M. A. Hunt were present, and the matter was talked over considerably, but everything now depends upon the World's Fair Committee. Whatever is done by the committee, the Hort. Society will act quick. If the International Show is possible President Chadwick, of the Hort. Society, stands ready to advance funds for preliminary work and thus avoid any delay on that score. If the greater show is impossible, the schedule of the Hort. Society for a show on its own account will be out within a few days after the decision is made.

The Local Committee of the Horticultural Division of the Department of Agriculture met at the headquarters of the World's Congress on Saturday, April 23. There were present Prof. W. W. Tracy, of Detroit, Mich., E. G. Hill, Richmond, Ind., Chief J. M. Samuels and John Thorpe, and Chairman J. C. Vaughan. Samuel M. Emery and Prof. Wm. Trelease were absent. E. G. Hill was chosen Secretary, and a general discussion followed after a statement covering the outlines of the work by the President, Chas. C. Bonney. A general plan was formulated for preliminary address to be issued soon, and the work for the next month was laid out and assigned to the various members of the committee.

Mr. W. W. Boyington is preparing to tear down his greenhouses at Highland Park and cut the land up into building lots for residences. He has arrived at the conclusion that the growing of cut flowers for market is rather an expensive amusement and will hereafter devote all his time and attention to upholding his reputation as one of Chicago's leading architects.

FIRE YOUR ORDERS IN FOR AURORA

And other stock. I have the cleanest, healthiest cuttings I have ever had, mostly plants established in soil, at the same price as rooted cuttings in sand.

EDW. SWAYNE, Carnationist,
KENNETT SQUARE, PA.

RICHMOND, INDIANA,

Still have a fine stock of the FOUR New Carnations offered by us this year.

BEN HUR—The finest of the Wilder color.

MRS. ROBT. HITT—A greatly improved Tidal Wave, both in color and size.

WHITE DOVE—The finest of all the whites.

ATTRACTION—Crimson scarlet.

You need the above for stock next season. Per 100, $12.00; per 1000, $100.00. Five hundred at thousand rate.

Other varieties of Carnations, New and Old, at lowest prices.

CHRYSANTHEMUMS, NEW AND OLD.

With the increased interest every florist should stock up with the newer and better kinds. Let us send you 100, our selection, new and recently introduced varieties, only $4,00. Send for complete list of Chrys.

In the way of **New Geraniums** we lead the **WORLD.** You need the newer of these splendid varieties of recent introduction.

THE BRUANT RACE are invaluable as bedders in our hot and trying climate. 100 of these in 10 varieties only cost you $4.00; or 100 in 20 varieties, $6.00.

Try our new **SUN PROOF** white bedding variety **Mrs. J. M. Gaar.** This equals **Queen of the West** or **Gen'l Sheridan** as a bedder. It is the finest introduction in Geraniums of recent years. One plant 25 cts.; 6 plants $1.25; 12 plants $2.25. 12 of the very latest Geraniums for $2.00, in 12 varieties.

Forcing Varieties of H. P. Roses.

MAGNA CHARTA, HEINRICH SCHULTHEIS, ANNA ALEXIEFF and GENERAL JACQUEMINOT, 100 $4.50; 1000 of above for $40.00.

Other Roses, New and Old, in immense quantities. Send for our list.

E. G. HILL & CO.,

JOHN G. ESLER, Sec'y F. H. A., Saddle River, N. J.

Toronto.

Certainly no one except a born grumbler could have anything to say against the weather this Easter, it having been just as fine as possibly could have been wished for, though no doubt those who did not do as much business as they thought they ought to have done will be able to pick it to pieces and find therein the cause of their slackness. What should we do without the weather for a scape-goat?

The Churches that decorate for this festival used larger quantities of flowers and plants this year than formerly and it seemed to me that more taste and common sense was brought into play in placing them than aforetime, though I noticed one or two very badly decorated and disproportionate crosses; most ladies think that a cross is easy enough to "do" and so it may be to those with a good eye, but there seem to be very few who can catch the proper proportions.

Amongst the flowers of course roses, carnations, daffodils, Roman hyacinths and lilies predominated, but in one church I noticed a lot of light bronze chrysanthemums and very pretty they looked too, something quite out of the way for Easter decoration.

Altogether I should say that there was a considerable increase in the volume of trade over last year in all classes of stock, but I intend to enquire more particularly into this.

We used a few years ago to have the impression that orchids were very difficult to grow but I am beginning to have the opinion now with regard to some of them at least that they are very hard to kill. Two sorts which most of the boys know and which have been knocking round this city for the last thirty years or more, nothing short of a good brisk oven and a chaff cutter can destroy the vitality of; Cymbidium aloifolium is one and the other is I believe an epidendrum that bears a bunch of little pink flowers like a feeble head of candy-tuft; they used to be very handy stock to have on hand to give away or to trade to the uninitiated; the latter could be passed off as a dendrobium sometimes and the cymbidium has fine strong foliage and looks as if it might produce something worth having in the way of flowers, but it doesn't. Now, since Bunyard and that ilk have visited the city the racket can't be worked worth a cent and the rubbish heap is likely to be the fate of these two old and faithful friends. Such is life! I keep a plant of each for auld lang syne.

The regular meeting of the Gardeners' and Florists' Association was held Tuesday and as usual it was a lively and interesting one, though not quite so well attended as usual; there is always a falling off at this time owing no doubt to press of spring work and Easter business. Botanic Gardens and World's Fair chrysanthemum show were the "pieces de resistance," and they resisted so much that they were laid over till next meeting.

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following Speak quick if you want them:

	Per 100
Dracæna Australis, 2 to 3½ feet high	$50.00
Dahlias, single tubers	3 00
Tuberous Begonias, from the finest European collections	5 00
Hibiscus Grandiflora, 3 to 5-inch pots	5 00
Clematis, pot grown, 8-inch pots	40.00
Calceolaria, from the collection of a celebrated grower in Europe. Nothing else on our place created so much interest last season, 4-inch	6.00
Genista Pubescens our plants that bloomed in January and February are now full of buds for a second crop, nice plants	8 00
Crotons, best bedding varieties, 3 inch	10 00
Hydrangea Thos. Hogg and Otaksa, we have a lot in the right condition for Decoration day, 6 inch	20.00
Rose, American Beauty, splendid clean young stock	8.00
Fuchsias, all the standard sorts ready for spring sales, 4-inch	8 00
Washingtonia Robusta, this is a splendid easily and rapid growing palm, it takes but a short time to make a good specimen. Should be in every greenhouse. We have a large lot of it in 4-inch pots, and in order to reduce stock will sell a quantity at	20.00
Latania Borbonica, we also have more of this elegant palm than we need and will sell a few 5 and 6-in. stuff in fine condition	100 00
Chamærops Humilis, will sell a quantity of those for a short time, 4 inch stock.	15.00
Cyperus Alternfolius, do you know that this is the best green to go with chrysanthemums, also a splendid thing for many other purposes, 4-inch stock	15 00
Marguerites, large flowering white, bushes 2½ to 3½ feet high	15 00
Carnations, 5-inch, in bloom	15.00

Vases in Iron, Rustic, etc., best makes, will sell for a song to close out. Window Boxes, we still have a quantity left, if you want any this is the chance of a lifetime. Price 1c. per lineal inch in length.

ADIANTUM CAPILLUS VENERIS—The coming Adiantum for the cut flower trade The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. If you are short of room now we will book your order and ship any time up to May 15th. **Price, strong plants, $8.00 per 100.**

For bargains in Plants, see issue of March 24.

H. H. BERGER & CO.,
Established 1878. San Francisco, Cal.

St. Louis.

The sun showed himself Saturday for the first time since Good Friday. The dark, rainy and cold weather has been hard on roses. There is now plenty of bulbous stock blooming in open ground.

A very beautiful tree just now in bloom at the Botanical Garden is Pyrus floribunda. The blossoms hang in graceful clusters of 15 to 20 flowers. The petals are bright rose color outside, and a delicate pink inside. The leaves are just large enough to make the green contrast well with the flowers. This tree is worthy of more attention than it now receives. It would be a good thing to have a few trees from which to cut bloom for the cut flower trade.

Three of the six scholarships offered by the Mo. Botanical Garden were vacant at the close of the year ending Feb. 29th. These were filled as follows: Arthur T. Irwin of Fulton, Mo., nominated by the St. Louis Florist Club; Emile Misch of Syracuse, N. Y., and Clyde Blankenship of Berkeley, Cal., the last two by competitive examination. Mr. Blankenship has not yet reached the garden. In accordance with the recommendation of the Director of the Garden, The Board of Trustees has reduced the course from six to four years. This course was contemplated by the Director when the course of study was first planned. After two years experience with the first appointed pupils, it has been found that the work can be satisfactorily done in four years. The course of study is as follows: First year; pupils will labor in the different departments of the garden nine and a half or ten hours a day. The second year, in addition to five hours daily labor instruction will be given in floriculture, elementary botany, small fruit culture, orchard culture, surveying and drainage, and the botany of weeds. The third year, in addition to five hours daily labor of the same sort, they will be given instruction in vegetable gardening, botany of fruits, botany of trees and shrubs, trees in their winter condition, landscape gardening, fungi, and book-keeping. The fourth year, in addition to five hours daily labor of the same sort, they will be given instruction in economic entmology, vegetable physiology, botany of garden plants, botany of ferns, botany of greenhouse plants, forestry, special theoretical gardening, and garden accounts. In order to reduce the number of classes, a part of the above subjects will be given in alternate years.

The Garden pupils are lodged in a neat building on the grounds, their rooms are comfortably furnished and cared for. They are also supplied with a reading room in which are the leading works on floriculture, horticulture and landscape gardening, and the leading periodicals on these branches are kept on file. Each holder of a Garden Scholarship is required to keep the run of current literature on garden matters.

Mr. F. N. Dewart, a graduate of Havard and for the past two years a graduate student and assistant to Dr. Goodale at that institution, now fills the place made vacant by the resignation of Mr. A. S. Hitchcock of his position as assistant in botany at the Botanical Garden to accept the chair of botany in the Kansas Agricultural College. J. C. D.

Parasitic Fungi as Related to Variegated Plants.

In a paper before the Torrey Botanical Club Prof. Byron D. Halsted said: "There seems to be no question that the variegated leaves are more susceptible, and that likewise the etiolated parts are the ones first attacked. The absence of green in a leaf, from this it is to be inferred, is a source of weakness, and upon this account the etiolated tissue is less able to resist the attacks of the fungus germs. Speaking generally, a variegated plant lacks capacity for the best work, and the gardener, in propagating a variegation, no matter how it may have originated, is propagating a weakened plant in so far as it has its normal amount of chlorophyll reduced. The fact that some sorts of the self-blanched celery have been found more susceptible to blights and decay bears directly upon this point. It is a pity that so many of our choicest variegated plants blight easily; it is, however, natural that they should do so. Even a fungus parasite will take the line of least resistance."

L. TEMPLIN & SONS have broken ground for their new greenhouses at Calla, O.

THE LOSS of Wilson Bros., Springfield, O., by the recent fire is estimated to reach $10,000.

AN International Horticultural Exhibition will be held at London beginning May 7, and extending through the summer till October.

Our Telephone.

"Hello, central! Please connect us with Mr. John H. Taylor."

"Mr. Taylor of Bay Side, Long Island, I suppose you want. Oh, I know him! And isn't it a pity his house was burned down? I was up there the other day to see the roses and it did look too bad to see nothing but just the cellar left where the handsome residence had stood. But so long as the roses were uninjured it don't seem quite so bad, does it? And, after all, I don't know whether I most admire the big roses in the greenhouses or the dainty anemones and bloodroots which you now see dotted so thickly all over the ground on both sides of the lovely driveway."

"Well, never mind, central. You seem to be wound up this morning. Kindly connect us with Mr. Taylor without further delay and we will forgive you."

"There he is. Go ahead."

"Good morning, Mr. Taylor. The FLORIST's readers would like to have you tell them something about your roses. How have they done this year? What is your specialty in tea roses? Anything of your experience which you will kindly favor us with will be valuable news for our readers."

"Very glad to tell you anything I can that will be of interest or valuable to your readers. But I have no 'specialty' in tea roses. No one rose is at its best all the year round. We grow Cusin, Gontier, Watteville, Mermet, Bride, Hoste and Perle and would not omit one of them. I don't think it good policy to confine one's self to a single variety. Even when sending the goods to a large commission house as we do, I find the best results are attained by having a fair proportion of all the good market varieties.

"Cusin is a great winter rose and is the best tea we have in the pink color. In the houses it is particularly desirable for the side benches as it is not too rampant a grower and every shoot carries a bud. It is getting a little warm now for this rose and the quality of the blooms is not what it has been. The only trouble with the Cusin is that when it comes deep colored as it does at this season of the year there is a tinge of magenta in it.

"Watteville is too strong a grower for the side benches. Owing to the ease with which it burns it is not much good between April 1 and November 1, but it is grand the rest of the year. Its season may, of course, be extended somewhat by shading.

"Perles are good to have just at present. The demand in winter is not so good, as roses are then used mostly for evening work, for which yellow is not a desirable color.

"Mermets we had difficulty early in the season to get sufficiently deep in color. One of my sports from the Mermet, which singularly enough appeared in the same season as the Waban and Bridesmaid, although not quite as deep in color as either of these varieties is yet a good bright pink in all kinds of weather, but the petals are somewhat cupped and I do not like the form of the bud as well as that of the Bridesmaid.

"With the Waban I find two faults. First, it is hard to get perfect flowers, and second, it is almost impossible to keep mildew off. When it is good it is superb, though. I took a few extra fine blooms in to Thorley and he didn't know what they were. On my asking him whether I should continue to grow it he replied 'By all means.'

"Hoste is a grand rose and profitable to grow; the only substitute for Cook, and I consider it one of the indispensable teas.

"Gontiers have done splendidly with us every year. But the house I take most pride in is a 250-foot house of Brides. The plants are about six feet high and the cut from them has been remarkably even all winter, more so than I have ever before known. It is just a sheet of white every morning and is then a sight well worth seeing."

"How many years do you run your plants?"

"That depends upon circumstances and upon the variety. I have a house of Gontiers now two years old which I shall run another year. I dry it off in summer just as we do hybrids. It gives a constant and tremendous crop all winter through. The canes are enormous, some of them not less than half an inch thick. My two-year old Cusins I think I shall run another season, but you'll never catch me running a two-year old house of Perles again. This is the first year I have tried it. I get strong wood and lots of 'bull heads.'

"We propagate all our own stock, whatever we need for the season's planting. I like the February and March cuttings. They make the best and strongest plants in the fall."

"How about hybrids? Is there still a place for them in the New York market?"

"Yes, some varieties. Luizet, Laing, Rothschild we must have for their color, but I believe Magnas are out of it. The American Beauty has injured Magna. There is no question about it, and it will drive any hybrid of similar color out of the possibilities. But if we grow chrysanthemums we must have something to fill our houses with after the chrysanthemums are off. I struck it just right on Magnas for Easter this season. I let them follow the chrysanthemums and come on naturally without excessive heat and got a great crop of fine blooms."

"Have you been troubled any with the roller worm on your hybrids?"

"Yes, a few years ago they struck us

and it took us three years to get rid of them. We followed them up closely and by constant watching and hand picking we gradually overcame them and this season none have appeared."

"Do you grow the Hinsdale carnation as much as formerly?"

"No; whether it is in the treatment or what not, the Hinsdale has not done well with us lately. It is nothing to what it used to be. Then, besides, they don't seem to want it in town at all. Silver Lake has been my most profitable carnation this season. It is a strong robust grower, pure white. It bears much more heavily than McGowan. The flowers are not as fine as the McGowans, but they bring just as good a price in the market. We got the rust disease badly on the McGowans. Tried 'Little's Antipest' on them with great success. Gave them a very weak solution in three applications and they are now perfectly clean. Paxton is doing well with us, and I intend to go into it more extensively next year. May Queen is the only pink variety we can grow here."

"Have you had good success with lily of the valley the past season?"

"The early batches did not do so well as usual. There was great difficulty in getting leaves. I never had so much trouble before. I think they are in too much of a hurry to ship the stuff to this country in the fall. The great demand for valley for Christmas forcing is partly the cause of this, and they don't wait to allow the roots to get thoroughly ripened."

"We understand you are building some new houses."

"Yes. Lord & Burnham are just completing for me two new iron houses each 200 feet by 20; 18 feet 6 inches is the regulation width of such houses, but I prefer to make them 20 feet; the difference of 18 inches comes off the back center bench, which is the best bench in the house and I don't like to narrow it up.

"The construction of my houses differs in several respects from the ordinary type in such houses. I do not believe in grooved sash bars. If a house is properly built and glazed there will be no drip and no necessity for any groove. The groove only weakens the bar and I see no use in it.

"South ventilation is another idea on which at one time I could find nobody to agree with me, but now many of the large growers, including Mr. E. Asmus, and some of the Madison establishments have adopted it. In all my houses I have provided doors in the back wall which can be used for north ventilation or for filling in soil.

"The new houses will not add materially to the amount of glass already on the place as I intend to drop off my upper range of old sash houses this season. That is, we shall not heat them again. I do not propose to tear them down at present, but shall fill them with roses for summer blooming. I have thought favorably of Luizet for this purpose and one of the houses is already planted with La France. I can get two or three good crops off it, including one in August, and there is always room in the market for a moderate supply of good roses during August."

THE M. C. R. R. Co. are putting up three 20x60 foot houses at Niles, Mich., to grow bedding plants for the ornamentation of their line. This is a step forward.

THE FLORIST'S new address is 322 Dearborn street, Chicago.

New Plants of 1891.

The Kew Bulletin just received is devoted to the "New Garden Plants of the Year 1891." Two hundred and sixty-one "new" plants are enumerated in it, and one hundred and fifty-five genera represented. Orchids are pretty numerous. There are 19 cypripediums, 18 odontoglossums, 10 cattleyas, 5 lælias, 4 oncidiums, and 3 ærides. Among other plants there are 4 each of anthurium, lilium, galanthus and hibiscus, but these are the highest numbers; the other genera are represented by from one to three species or varieties. The whole list is little other than a condensed compilation from florists' catalogues, and the horticultural press. The following are a few of the new plants mentioned.

CALAMPELIS SCABRA VAR. ROSEUS.—A seed novelty this year and the first break in color from the old C. scaber whose flowers are orange-red. Easily raised from seed, at least what I sowed came up nicely. But why spell it "scabra"?

CYPRIPEDIUM BROWNI.—A garden hybrid between C. magnificum and C. leucorrhodum, raised by Pitcher and Manda, of Short Hills, N. J., finds a place among the new 19.

FORSYTHIA INTERMEDIA. — "A garden hybrid between F. suspensa and F. viridissima." A very unfortunate name considering that the specific identity of these two plants is disputed, and all manner of intermediate forms may be secured from seeds of either of them, and that too without any fertilizing contact between them.

HELENIUM BOLANDERI —A little California annual that is not new either in European or American seed-lists.

HIBISCUS CALIFORNICUS.—A hardy herbaceous plant much like a white-flowered form of our eastern swamp rose-mallow (H. moscheutos) and not at all new to cultivation.

HIBISCUS CALYCINUS. — "The correct name of the plant introduced and distributed a few years ago under the name of H. chrysanthus. Native of Natal." A capital plant for outdoor work in summer. Of bushy habit. Bears numbers of large, blackeyed bright yellow flowers in late summer and fall. Strike a few cuttings to keep over winter.

ILEX MONTICOLA.—From the Alleghanies. Does well with us. Still, I question if it will ever become a popular shrub in the north.

IRIS ROBINSONIANA —It's about time this plant was getting old now; certainly we have seen and heard a good deal about it during the last few years.

LILIUM MARTAGON X HANSONI. — "A hybrid between the two species named, raised by C. G. van Tubergen, Haarlem." This hybrid lily is specially noticeable for two reasons: namely, that aside from it and testaceum we are not sure that a hybrid lily (Lilium) has ever before been produced, also that L. Hansoni has not, so far as I know, ever borne seed in cultivation. In this case, it was only the pollen parent. In fact, Mr. J. G. Baker, the great systematic botanist at Kew, writes: "The only clear and undoubted instance (of hybrid lilies) known at present is Lilium testaceum, the Nankeen lily, which is evidently a cross between candidum and chalcedonicum." Of course we all have heard of L. Parkmannii and L. Hoveyii and many of us have seen them in bloom, but of recent years when so many different forms of auratum have come to us from Japan, we begin to ask ourselves were they hybrids at all?

LILIUM ELISABETHÆ. — "This is the same as L. Japonicum."

MAGNOLIA WATSONI. — "A deciduous species with large creamy-white flowers with blood-red filaments. This is a gem, quite hardy, easy to grow and sure to bloom. Indigenous to Japan. Although new to Europe it has been in cultivation in this country for several years, and has before now been mentioned by me in the FLORIST. It is in its best bloom with us during the first fortnight of June.

MALUS PARKMANNI, FLORE PLENO.—A synonym of Pyrus Parkmanni. A beautiful tree or large shrub. It shows relationships to M. spectabilis and floribunda; it is, perhaps, a hybrid between these two species. A few years ago it was a plant novelty in this country and is now well known. It is in full bloom with us about the 6th or 10th of May according to the season, and then, without any exception, I think it is the loveliest tree in our collection. The flowers are only semi-double and more beautiful in the bursting-bud condition than when full open. Although for practical garden purposes we call it Pyrus Parkmanni, its proper botanical name is Pyrus baccata floribunda flore pleno.

PENNISETUM VILLOSUM.—"An ornamental grass of tufted habit with long, dense, plumose, white spikes. Abyssinia." I wonder if this is the same thing as P. longistylum? Although the name has appeared in seed catalogues for years it isn't in Nicholson's Dictionary. To test it, some years ago I bought seed and grew the plants alongside of the genuine longistylum, but could find no difference between them. By the way, what a number of people were interested in that grass bed in the FLORIST, page 663. In a few days I gave away all my spare seed of the Pennisetum and had to disappoint several friends.

ROSA WICHURAIANA.—"A handsome species with dark glossy green leaves and white flowers, suitable for clothing rocky slopes, etc. Japan." This is the Rosa bracteata of European nurseries. Within the past few years it has been largely propagated in this country and is much in demand by landscape gardeners. It is an exceedingly fast growing running species whose nature is to spread out flat over the ground and form a carpet, and not to climb. Its leaves are dark green and shining, and it bears terminal clusters of somewhat small, white, fragrant flowers in July. It has been largely advertised within a year or two.

WELLINGTONIA PYRAMIDATA COMPACTA. —A garden variety. When will the people of Europe drop this "Wellingtonia" name and gracefully accept the proper one, Sequoia? WM. FALCONER.

Cut-Worm Remedies.

The season for the cut-worm is again at hand. When so numerous as they sometimes are in newly turned sod ground, it often is quite difficult to free the ground of them before they have done great harm to plants. In flower beds and forcing houses they are usually not so numerous, but may do equally as great damage by severing rare and more expensive plants.

Where the cut-worms are not too numerous much of the protection depends upon the early detection of their whereabouts. As soon as their work is suspected, a little digging around the plant will often

GRASS BED AT THE NATIONAL BOTANIC GARDEN, WASHINGTON, D. C.

reveal them when they can be killed before doing any great harm.

Many remedies are advocated, some very good, but many entirely worthless. The best are the only ones that need mentioning. To *prevent* attack is difficult and rather tedious when extensive, but often the most practical where costly plants are endangered. Probably the best preventive is to encase each plant in a pasteboard box from which the top and bottom have been removed, or a tin can fixed the same way. These cases should be as small in diameter as possible and still not interfere with the growth of the plant while the protection is needed. They should be pushed into the surface soil sufficiently deep to prevent the cutworms crawling under. When carefully carried out, this method is quite satisfactory. It is also used in protecting young garden plants.

If the cut-worms are found to be numerous in a vacant plot soon to be used, much can be done to rid the plot of them by taking freshly cut clover grass or mullein and dipping it into a strong solution of Paris green and then distributing it in bunches over the ground. If they are hungry, they can be poisoned in this way and the ground can be used with no fear of their depredations. Where sod must be used it is well to turn it over early in the fall and every week or two stir thoroughly especially in the spring till it is needed for use. This brings the larvæ to the surface where they are much more exposed in every way and their numbers diminish.

Some have recently reported that they have had trouble in keeping flower and foliage beds because the cut-worms would come in from the surrounding sod and feed upon the tender plants. To stop this there is probably no better remedy than to soak the surrounding sod in kerosine emulsion. The ground should be wet down several inches. The emulsion will do the grass no harm if properly made, and diluted so that there is only one part of kerosine to fourteen of the soapsuds. For fear all do not know this formula, perhaps it would be well to give it in brief. For every two quarts of water used, take one-fourth pound hard soap, or one quart soft soap, and dissolve in the water by heating to the boiling point. After this, remove from the stove and for each two quarts of water so used add one pint of kerosine oil and then, by the use of a spray pump, pump it violently back upon itself for about five minutes into the vessel used. This should make an emulsion from which no oil will rise when diluted with water. If this sample stands the test, add twice as much water as you have emulsion, or if soft soap is used take as much water as you have emulsion, mix and apply. A pump must be used in making the emulsion as stirring with a stick or spoon will not form an emulsion.

G. C. DAVIS.

Agr'l College, Mich.

A Handsome Grass Bed.

The grass bed illustrated in this number of the FLORIST is 120 feet in diameter. It has for a center the Arundo Donax, the reed so often mentioned in the Bible as "What went ye out for to see? a reed shaken with the wind," etc.

It is a native of Palestine, Egypt, abundant on the borders of the Dead Sea, common in the south of Europe, and grows with us 15 feet high. Its glaucus green color is restful to the eye. Around it are four pieces of Erianthus ravennæ from the south of Europe. Just how far north of this it will prove hardy it is a question.

Next comes four plants of Eulalia Japonica zebrina, the tallest growing of the three forms; the variegated form next; then the very distinct gracilis, or gracillimum of some. We have not seen a description of it except in trade catalogues. The eulalias are much more hardy than the others.

Then comes the variegated arundo growing about four feet. This we plant every year. It is not quite hardy in all places here.

Cyperus alternifolius, from Rio Janeiro, we plant out every year and its fine green is effective. Pennisetum longistylum, an Abysinian grass, planted in clumps near the front, makes an interesting feature. Pennisetum latifolia, from Montevideo, growing a little taller, is a good ornamental grass. Gymnotrix is the old name for pennisetum. The purple stemmed sugar cane adds interest to the group.

Cannas interspersed between, with high colored foliage plants and the whole edged with the best colored alternanthera, makes a cheap, graceful and very attractive flower bed, that even our friend McMillan, of Buffalo, with his refined taste, I think would be pleased with.

Washington. WM. R. SMITH.

Fungi Common to Wild and Cultivated Plants.

In an article with the above heading in the Botanical Gazette, Prof. Byron D. Halsted says:

"It has been shown by means of a long series of examples that the evil influences of wild plants may act at long range. It is not necessary that their roots and those of the cultivated plants should cross each other's paths in the soil or that their branches should interlock and overshadow one another in a deadly embrace. There is a more subtle bad influence than gross thieving or clutching by the throat. It is more in the nature of a poison that is sent out upon the air to be breathed in by the innocent wherever they may unwittingly meet the unseen but deadly germs. Crowding of plants is bad, rank growth of weeds is worse, but the most fatal of all influences is that unseen group that steal away the health of the plants which lack nothing for room and enjoy high and thorough culture.

"After all it is the host of enemies that swarm from the plants outside the garden fence that try the patience of the husbandman. He has learned the methods of re-

medying the others, but the floating spores defy his keenest eyesight to discern and baffle his ingenuity to combat. The ways of the fungi are however being slowly and laboriously revealed by the microscope and conquered by the spraying pump. The former assists the latter, which as yet somewhat blindly fires effective 'small shot' into the enemies' ranks.

"Proper seeding, fertilizing and weeding will do much to assist in warding off the deleterious influences of fungous enemies, for healthy plants, while not proof against their attacks, are less liable to be overcome by them. Let therefore everything be done that is possible before the last resort comes and then the fungicide will have the greatest effect and yield the most returns. If so much of the smut, rust, mildew, mold, rot, and blight of our cultivated plants is propagated by the wild plants hard by, it may be wise for every crop grower to pay attention to what is thriving outside his garden wall. He cannot build it high enough to shut out the spores, but he can do much to diminish the number of these spores. Having done this, he can take up the spraying pump with a brighter hope of future success. There was a carcass, so to speak, in the pasture and he went out and buried it. Fungi are the basis of contagion and they infect at long range by means of their myriads of invisible spores. To learn of their ways and find better methods of resisting them make the burden of many a station botanist to-day."

Interest in Local Societies.

"How can we make the florists of the country take more interest in and properly support local societies?" is the query propounded by one of our readers, and he asks for a general discussion of the subject in these columns. He sends a copy of the list of subjects brought up for discussion at their last meeting and certainly there should have been something among the subjects noted to interest every florist in his state if treated in a practical manner by those to whom they were assigned. Still he says that the attendance has dwindled down to almost nothing. He adds that the whole work of the society falls upon the shoulders of the officers of the society and that it seems impossible to instill any active interest into the rank and file.

This problem is not a new one by any means. And the difficulty is not confined to organizations of florists alone. The work in any organization is always done by a few enthusiastic members who take up the burden and carry it on. The other members are dormant to a great extent until some unusual event occurs which may at last awaken their enthusiasm for a time at least. But when the reaction occurs the old standbys must take up the burden again to prevent the ship from going down. Even one bright, active individual may make the difference between success and failure in an organization, and two or three can work wonders. But the mass of the membership can rarely be depended upon for active work. But even if only a dozen attend the meetings the organization is doing good and should not be abandoned. The existence of a trade organization in every city large enough to support one is positively demanded by *your* interests as well as those of the others in the trade, and because some of your neighbors may be constitutionally tired is no reason that you should cease your efforts to keep up the credit and the dignity of your profession.

No organization is perfect. Some are better than others, but a perfect organization will never be had until there is a body of perfect men to form its membership. Every organization has its fool. Every one has the member who talks on every subject he knows nothing about until his hearers' ears ache. Every one has members who could give a vast deal of acceptable instruction and advice, but who persist in maintaining silence. Every one has in its membership intelligent men who become disgusted at the first exhibition on the part of the fool and the animated windbag and come no more to the meetings, wronging the other members as well as themselves by their failure to do their share toward bringing out the intelligent members and keeping in subjection the elements that threaten the life of the organization.

It is a curious fact that men whose conversation is always bright and enjoyable are frequently dry as dust when they address an audience of over two. They seem to think that they must then adopt a different mode of expressing their thoughts, or use different words, and in the selection of the proper words and phrases they accidentally omit the ideas. As a result they send forth a gaily colored wagon but without any load, and as it's the load and not the wagon his hearers want they are generally sadly disappointed. Oratory is needed on mighty few occasions in this hard, matter of fact world. What we want are plain unvarnished facts and the language used in ordinary conversation can convey such facts far more effectively than the most brilliant oratory.

But keep up the work. Don't let the organization die. Every meeting opens the way for something better in the future. But don't look for perfection, because it is unattainable here among organizations of any kind. Simply do the best you can.

Leaf Spot of Foliage Plants.

When the leaves of a plant, grown particularly for its beautiful foliage, are blighted, from whatever cause, the value of such a specimen quickly disappears.

Leaves are made unsightly in many ways. Insects may eat holes in them and thus sadly disfigure the plant if not entirely ruin it as a thing of beauty. Other and perhaps smaller insects may burrow within the pulp of the leaves and while not making any holes they cause brown irregular lines to appear like the trails of microscopic serpents. These last are not easy to combat for they are within the leaf and not reached by a spray of some arsenical compound.

There is another class of enemies aside from the insects that work within the substance of the leaves and cause them to become blotched and decayed. These are eel-worms or nematodes, which are microscopic worms that breed rapidly in the tissues and feeding upon them cause unsightly patches, if they do not entirely destroy the plant. These eel-worms breed also in the soil and finding their way into the roots cause galls to form and thus diminish the activities of the root system.

Still a third group of enemies to plants consists of the various kinds of fungi. These are minute plants that grow within the substance of the host and destroy it.

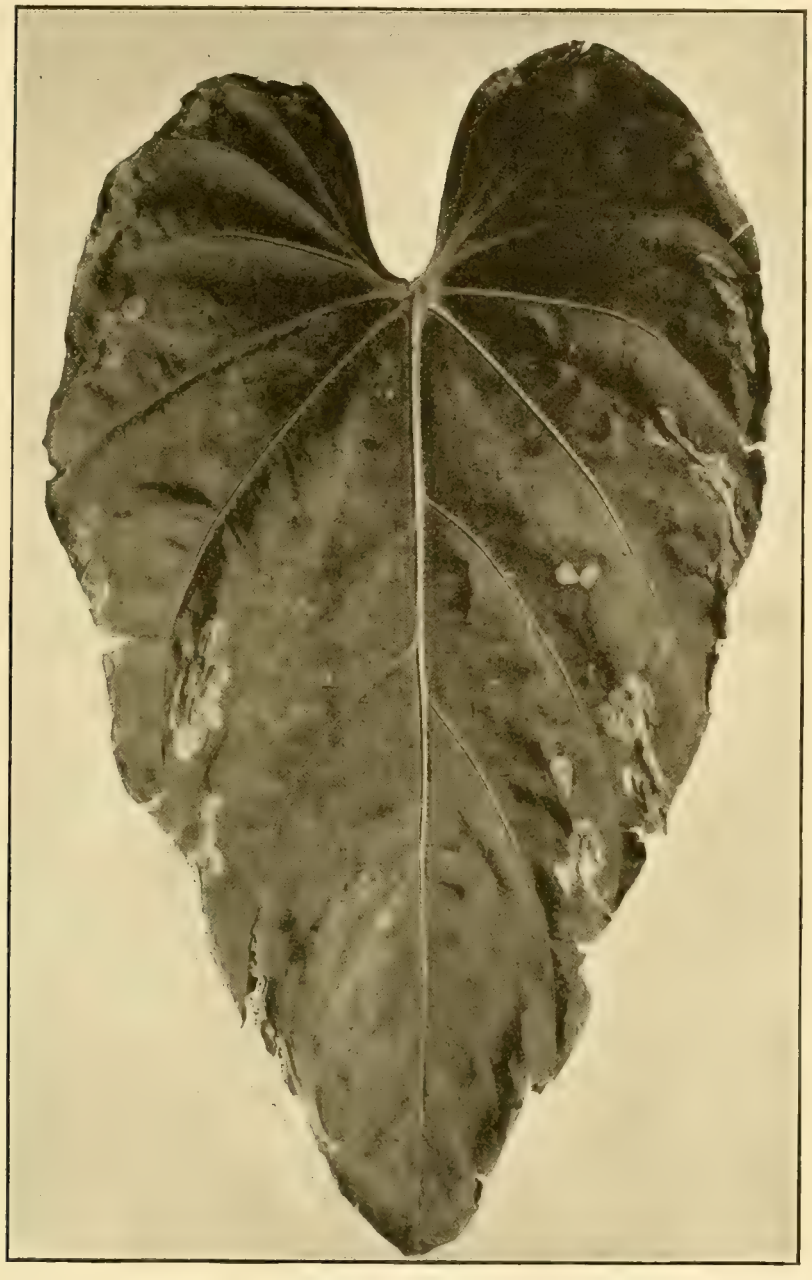
The accompanying engraving is from a photograph of a leaf of Anthurium grande, of course much reduced in size, the natural one being fully two feet in length. This leaf was sent to the experiment station because of the dead patches which occupied a considerable part of the otherwise grand blade of the leaf. These brown patches are most abundant midway of the chief veins and near the outside of the leaf. They are caused by the fungi as above stated and upon the leaf shown there were not less than three distinct forms, placed in as many genera. It is not the place here to consider the microscopic differences in detail, the chief point being to call attention to the fact that the brown and unsightly spots are not due to insects, not to nematodes, not to the weather or lack of heat or light, but to a parasitic fungus that preys upon the living substance of the leaf and destroys it. The surroundings may favor or discourage the development of the fungus just as warmth and moisture stimulates any plants to greater growth, but the fungus must come from a germ as surely as a wheat plant must come from a grain of wheat.

The fungi are made up of a multitude of fine threads which run in all directions in the leaf and after a time form pimples for the production of spores. These spores are like seeds in that they can be removed from one place to another, and then if conditions favor will grow into a plant like the one from which it came.

The spread of the trouble may be checked by using some substance that will kill the spores or prevent their germination when in contact with them. Such substances as fungicides are now generally used for the mildews and blights of the grape, apple, pear and other crops of the orchard and vineyard. There is no reason why the grower of foliage plants should not take the same precautions against the destructive attacks of fungous enemies.

It has been seen that the anthurium leaf, out of which all its beauty had gone, was taken as an object text from which to write. The reader while he has read the above lines may have kept the bad example of neglect in sight and perhaps felt sufficiently awakened to the importance of using what light there is for him in keeping his foliage plants free from the blights that spoil the leaves.

BYRON D. HALSTED.
Rutgers College.



New York.

There is a very general complaint about poor trade for the past week among the cut flower wholesalers. While the retailers do not claim to be very busy yet they do not all admit that it is extremely dull, and probably one main cause of the dullness in the wholesale line is to be found in the overstock of flowers coming in. Most of the rose growers are having heavy cuts at present, and as this is the time of year when roses can not be held over from day to day the street fakirs who can only buy when stock is plenty and prices low get in their fine work. They appreciate the fact that at such times the big overstock can not be unloaded excepting with their help and they make the most of it.

Large roses do not seem to be in great demand. There are a good many of them in the market, some splendid specimens, many very inferior.

American Beauty is still to be seen with 3-foot stems and big foliage, but it is getting decidedly off color as compared with its winter appearance. Lilies and callas are very plenty, lilacs exceedingly poor in quality, lily of the valley scarce and inferior and violets about done. Carnations still sell well if white or pink. Red ones go slowly.

The shipping trade appears to be wound up for the season, an occasional telegraphic order being about the only re-

LEAF OF ANTHURIUM AFFECTED BY LEAF-BLIGHT.

minder that there are buyers outside of the city. The rapid fall in prices has had the usual effect on consignors and they are getting restless, several changes from one commission house to another having taken place within a week.

The resort at 34th street ferry where the flower market is located is not large enough to hold the heaps of stock of all kinds and the crowds of "Greeks" who swarm there looking for bargains, and sometimes part of the trading and bickering has to be done on the sidewalk.

Smilax is still one of the scarcest commodities in the market, there being little on sale, and that of poor quality. Rudolph Asmus, who has a house coming in, says the demand is such that they have to cut it while entirely too small; people must have it. The crop is shortened in some directions by the appearance of that aggravating little worm which caused such havoc a few seasons ago. Mr. Asmus is also growing some fine Jacqs.

Ernst Asmus is sending in handsome Prince Camille de Rohan. It is a rose of remarkable richness, both in color and texture, though hardly so fragrant as the Jacq.

Some very showy hybrid amaryllises are now in the market; it seems as if there should be a big future for these plants in decoration. Empress of India is perhaps the best, it is very large and of extremely firm substance.

Just now the retailers are doing considerable steamer work, either baskets or designs. A good deal of funeral decorating is done in spite of the "Please omit flowers" notices. Speaking of funeral work recently Mr. Hafner commented on the large increase in the use of colored flowers, naming as an example a bunch of Jacq roses, tied with ribbon of corresponding color.

Moss roses and sweet peas are among the seasonable flowers now attracting attention; both very good. Arbutus and buttercups (Caltha palustris) and Mountain laurel are wild flowers noted both in the stores and on the streets. Moss roses arranged simply with their own foliage have been used lately with good effect in dinner decorations.

There has been a big demand for white orchids all through the season and not enough are grown to supply the demand for weddings and funerals. Thorley's windows have been decorated beautifully with orchids, anthuriums and lapagerias. A handsome group of Cattleya Mossiæ among which a black cat lay asleep attracted a great crowd.

A good idea noted in growing decorative palms is to cover the pots with lycopodium. Once started it runs like a weed, covering the soil and hanging over the pot, adding materially to the appearance of the palm, and consequently to its salableness. Costs no more either, for most places have plenty of lycopodium running under the benches.

Ernst Asmus speaks very highly of the new dark carnation Pomona which he has been giving a trial. It is one of Starr's seedlings.

Discussing carnations lately Dailledouze Bros. spoke very hopefully of their new white French variety, Miss Moore, which made its first appearance at one of the club meetings during the winter. Like many Long Island growers, Dailledouze Bros. look on Silver Spray as their best white; it seems to suit them better than Lizzie McGowan; the latter appears first favorite in New Jersey. It is a well established fact among carnation growers that the same variety can not be grown with equal success in every locality.

The house of anthuriums at Pitcher & Manda's is a magnificent sight now. Many grand specimens of the decorative foliaged varieties are to be seen, and the numberless hybrids of the Andreanum and Ferrierense type are showing a great variety in shades of color and in form. The shades run all the way from a delicate pink to deep blood color. Among the novelties seen is a fine plant of Pandanus amaryllifolius, a species with no thorns and of graceful form. From the collector has come a rediscovered cycas, Zamia Lindenii. There is quite a number of the plants and they are beginning to grow rapidly.

At Mr. Hicks Arnold's conservatory in 84th street there is a magnificent show of blooming cypripediums now.

The spring auction sales at Elliott's and Young's are well attended.

Sander's orchid sale on April 29 drew quite a crowd of the boys and was considered by Mr. Dimmock a very satisfactory one for this time of the year. Cattleya labiata found a ready sale at "florists' prices."

An auction sale which attracted attention this week was the collection formerly belonging to John Finn. Mr. Finn was well known as a grower of decorative plants, and also as an exhibitor in the old days of the Madison Square Garden.

There was a nice lot of the hardy rose novelties, R. Wichuraiana and the Dawson hybrid from W. C. Strong. These plants were all in Neponset paper pots and were in every respect vigorous and clean.

A special meeting of the Florists' Club was called for April 29, to make arrangements for their work in connection with the Actors' Fair. The flower booth, or rather floral theater, gives scope for ample decoration, being about 75 feet long; a tall May-pole stands at the back, while in front the roof is supported by handsome turned pillars of white and gold. A

quantity of laurel is used for garlands, and the booth is further decorated by both plants and cut flowers. The trade generally feels very generously towards the theatrical profession, and every one is willing to help.

The meeting was attended by quite a number of the prominent members, and Mr. H. A. Siebrecht, who is chairman of the special committee, made a report of progress and showed some diagrams of the proposed floral booth. He read a list of names of those growers and others who had signified their intention of furnishing plants, etc. Mr. Siebrecht was requested to see that the part taken by the club in the affair be given proper recognition in the daily papers.

The two commission houses, F. D. Hunter and James Purdy, have formed a union under the firm name of Hunter & Purdy, and will locate at 51 West 30th street, where Mr. Hunter has been doing business.

The retail store on Broadway recently occupied by J. G. Bebus is vacant, he having decided to try his fortunes at the wholesale business in partnership with Mr. Patterson at 12 West 27th street.

The plant market at Union Square is gaining strength with the lengthening days and the locality is a busy one every bright morning.

President James Dean, of the Society of American Florists, is mourning the loss of his mother, who died at the residence of her son David at Astoria, on Friday, April 29. Mrs. Dean was advanced in years and has been in failing health for a long time. Mr. Dean will have the hearty sympathy of his many friends in his bereavement. The funeral took place on Monday, May 2.

A son of Mr. Ernst Asmus has been taken suddenly ill with pneumonia.

Mr. W. A. Manda will visit the European trade, sailing from New York May 11.

Philadelphia.

The season has begun to show signs of weakening, still there was quite a good deal of business the past week, wedding decorations forming a large part of the work.

At a house wedding all the prominent palms about the rooms had attached large square bows of different colored ribbons, said to be the latest Parisian idea.

While flowers have been plenty they have found ready sale and prices have not fallen much. La France, Brides, Mermets bring 6 to 8, Perles, Gontiers, Sunsets 4 to 5; Jacks 10 to 15; hybrids and Beauties 20 to 40; carnations 1½ to 2; longiflorums 8 to 10; tulips and daffodils 4; a few extra fine single trumpet major from Harris 6; valley is being pushed up to 5, and 6 is predicted next week; but there will be a drop soon for outside valley will be in before long.

The past season has evidently been a prosperous one, as in every direction one can hear the hammer and saw and the sound of the mason's trowel.

John Burton is erecting three houses, 150x20. These are for his *new* pink American Beauty. He has a fine stock of this variety and many think it will attain as great popularity as its much renowned sister. It has not as yet been named, but we hope to have an invite to the christening which will no doubt be a very interesting event.

Messrs. Meehan, Butler and Meyers, also of Chestnut Hill, are busy with new houses. At Rowlandsville C. F. Evans & Bro. are erecting three houses 25x60 in which to grow roses for summer and early fall. Even in the dull season there is a demand for good roses and to meet this quite a number of houses are being planted. Messrs. Robt. Craig and Jacob Becker have houses planted with Marie Guillot and Duchess of Albany for this trade.

A plant that has always been scarce in this market and that sells well, particularly at Easter, is heather (Erica persoluta), it is beautiful when in full flower and being so compact is nice for table decoration. Quite a number of these plants were bought by Messrs. Harris and Craig from Mr. Dirwanger, of Portland, Maine, who makes a specialty of it. They were stocky little plants and kept in a house almost without fire, were easily brought in for Easter. Although it has been imported from Europe a number of times it has never been a success, always being received in poor condition. Robert Craig thinks there would be a large sale for well grown plants and predicts a great future for it.

Mr. W. Atlee Burpee was married to Miss Simmons, of Philadelphia, at the West Spruce Street Presbyterian Church Saturday, April 30.

Mr. Alex Scott, of Penrose Nurseries, furnished the decorations which were on an elaborate scale. In the alcove back of the pulpit was a pyramid of Easter lilies about 20 feet high; in this group alone there were some 300 pots. Extending from the base of this to the edges of the platform were palms, hydrangeas, azaleas and other plants gracefully arranged, while at the end of the aisle in front of the pulpit was an altar rail of roses and other white flowers. The windows were all banked with plants in flower and the columns twined with laurel and tied with clusters of lilies. There were eight large wagon loads of plants in the decoration which was pronounced the finest ever seen in the church. It was Mr. Scott's present to his friend Mr. Burpee and he spared no effort to make it as handsome as possible.

A short time ago Mr. Burpee was given a dinner by some of his bachelor friends at the Bellevue. He was warmly congratulated and presented by each one with some sort of kitchen utensil accompanied by an appropriate speech. By the time his friends were through he was completely overwhelmed and his stock of housekeeping hardware was truly immense. It was a very enjoyable occasion and will long be remembered by those present.

Cards are out for the wedding of Mr. Chas. F. Evans to Miss A. R. Kenny at West Arch Street Presbyterian Church Thursday evening, May 12.

Things are lively at the alleys now. The new contest inaugurated last Wednesday is exciting great interest. Longinette made 512 in three games, while Westcott and McLean were next highest with 452 and 453. K.

Buffalo.

Usually after a storm a calm is expected and last week's business was less exciting, but by no means bad. The revival of balls, dinner parties and other social events kept the florists busy, more so than last year at this time. Prices were correspondingly good. The remarkable cold weather kept outside stuff—daffodils, tulips, etc., entirely out of the market, and those grown under glass met with a ready sale at good winter prices.

Reports from all quarters confirm my remarks of week before last that the Easter business was very satisfactory with all hands. A fine plant or box of cut flowers is at present the ideal Easter gift and all classes indulge in them. There is, however, a little change needed in some of the plants grown for Easter. The public tire after a while of the same old plants year after year. Of lilies there are about enough grown to meet the demand; of spireas too many. Azaleas sold well and so did hydrangeas. Cytisus does not go as well as formerly; it is a poor house plant. I will not venture to say what the Easter plants of the future will be; bigger lights will do that, but some other plants will have to be brought forward, that is certain.

In interviews with several of the boys I learned the following: That Buxton's violets gave out at the last moment and he was unable to fill several of his orders. Palmer & Son had 16 messengers running steady for 24 hours. Dan Long was well pleased with his business and also well pleased that another Easter will see him out of the hurry and flurry of the retail trade. W. Belsey sold clean out. His greenhouses are as good as a store. Milley wholesaled his stock and could have disposed of much more. He was the lucky smilax man of the week. By the bye, Wm. B. Milley is the only florist here, or in a good many other cities, who can stand on the path and tie up a 10-foot string of smilax. How is that for high? Rebstock did such a business and worked so hard that on Sunday at 5 p. m. he took a Turkish bath, retired to his bachelor apartments and hibernated for three solid days and nights. Laurence & Giddings did well and did some fine church decorations. Adams & Nolan were both much prostrated with overwork, but Adams turned up at the bowling meeting on the following Monday very weak in the flesh but chipper. Christensen was delighted with the business he did, both at the greenhouses and store. The figures he gave me of his week's business crashed on my brain with such a weight that I was not able to retain them. Mepsted, Scott's down town manager and right bower, worked perhaps as hard as any one. He says he worked till 4 a. m. Sunday, then jumped into a carriage, was driven three miles to his home, rushed indoors, took 40 winks, 5 grains of quinine, comforted his wife, entered his carriage and returned to the store a fresh man in less than two hours. The carriage was of course at his employer's expense.

Mr. and Mrs. Charles L. Dole, of Lockport, N. Y., have called on us. They are in good spirits over their Easter trade and say the demand for good plants in their city was great. Mr. Dole is planning to build an addition to his houses.

All kinds of flowers met with a ready sale, but carnations, roses and violets took the lead. Tulips went a little slow. Orchids were offered by several florists, with very little demand, although there has been several good orchid orders since. As there were no absurd high prices asked for any kind of flowers stock of all kinds was entirely cleaned up.

Mr. Peter Crowe, of Utica, made his appearance in town this week and in company with your correspondent visited several of the city greenhouses, and then we started for Lancaster, Erie Co., to call on Mr. W. J. Palmer. We found the veteran superintending his very large establishment. He carried a hoe with him, but it was more as a staff than a weed exterminator that he was using it. Mr. Palmer says that tulips in Buffalo have had their day except in limited quantities. He has thousands of magnificent tulips with no demand for them. He is cutting large quantities of good

roses. La France, Brides and Mermets were looking well, although Mr. P. says what with building a range of new houses and an extraordinary scarcity of water last fall his roses did not receive the attention they should have had. Carnations are grown at this place to perfection and with the exception of Grace Wilder, which is just between crops, all kinds were yielding immense quantities of the finest flowers. The varieties grown are Silver Spray, Portia, Tidal Wave, Harrison, Grace Wilder and Buttercup. The latter fascinated the writer more than any other because they were grown simply to perfection, not a bad flower among them and flowering like old La Purite did 20 years ago. With the exception of some lilies, spiræas and a few such plants to supply the store in the city, the whole of the glass, about 60,000 feet, is devoted to growing flowers for his retail trade. G. S.

Boston.

Everybody is complaining of dull trade this week. The quantity of cut flowers coming in is not so large, but there seem to be no buyers. Roses of the ordinary market varieties sell all the way from $2 to $8 per hundred, according to the variety, the customer, and the occasion. Carnations, strangely enough, seem to hold up in price and feel the depression much less than the roses appear to. Lily of the valley is running short and is in fair demand. Violets of the regular winter variety are done, but the beautiful dark blue Cape Violets, so called, are in and sell well, as they deserve to. Tulips are coming in from outside, hence are cheap and in poor demand. There are some good hybrids about, notably Brunners, which bring from $15 to $25 per hundred. Among the more uncommon things now seen are gladioluses of best quality which bring from $8 to $10 per hundred. Another novelty of the simple kind is the blue-flowered Centaurea (Bachelor's Button or Corn Flower).

The street fakirs are giving their attention principally to the "Plymouth May Flower," and these pretty but cheap little blossoms seem to be the favorites for corsage wear at present.

That old Boston favorite, the rose Souvenir de la Malmaison is beginning to come in in quantity.

The plant auctions have commenced in earnest, and the two rival establishments —Hatch, at 111 Federal street, and McCarthy, at 129 Kingston street, will exercise their lungs and their persuasive powers every Wednesday and Saturday at 10 a. m. in the interests of their consignors until June.

One of the most beautiful customs here at Easter is the distribution of flowers at the various hospitals by the Boston Easter Flower and Music Mission. Over 1500 unfortunates were thus kindly remembered on Easter Sunday morning.

The Fitchburg R. R. Co. has arranged to have the grounds at all passenger stations between Boston and Fitchburg laid out with shrubbery and flowers. The work will be begun at once.

Thos. W. Weathered's Sons have secured the contract for the construction of a range of three greenhouses for stove plants, roses and carnations, for Mr. John P. Spaulding, of Dorchester. Work on the foundations has already begun.

The wife of William Edgar, of Waverly, died May 2, of pneumonia.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Chicago.

Roses, and in fact nearly all stock, is a drug on the market. Late in the day roses have been sold at as low as $15 to $20 a thousand. The quality of the roses suffered greatly during the few hot days we have had, especially La France and Mermets, which are very poor in color. Jacqs are coming in more freely and keep up better in price than most other stock, good flowers bringing from 10 to 12.

Northrup, of La Grange, has been bringing in some good outdoor grown Dutch hyacinths that have sold readily at $5 a hundred, a good price for outdoor flowers. But the bulk of the hyacinths coming in are of poor quality and can be had at from $2 to $3 a hundred.

Klehm and Janes are bringing in sweet peas and the former is cutting some very good flowers.

The fakirs are out in full force, selling roses at 25 cents a dozen. And the fakirs are not all confined to the curb. Some of the storekeepers seem to be competing with the fakir in his own field and have their windows plastered with "cut rate" prices that smack strongly of "Greek."

Trailing arbutus (Mayflower) has been in during the last week. This week will about finish it.

Among recent visitors to the city were Messrs. W. C. Barry, Rochester, Emory E. Smith, San Francisco, Julius A. Schnapp, New York, G. W. Currey, Nashville, Tenn.

A. H. Saxon, gardener for W. H. Rand, will build four houses, each 75x11, at Downer's Grove, and start into the business of raising carnations and violets.

The Florist Club has arranged for a meeting place in Kennicott Bros.' new storeroom, 34 and 36 Randolph street.

Mr. Thorpe was unable to be present at the last meeting of the Florist Club and the essay upon the chrysanthemum was not forthcoming. No business of importance was transacted and an early adjournment was had. At the adjourned session some very curious scores were constructed.

Mr. O. P. Bassett has returned from California much improved in health. He was much impressed with the roses to be seen at Santa Barbara in April.

The tulips are in bloom at the parks but the stems are very short owing to the cold spring.

Changes in business location were numerous May 1. Geo. Klehm has gone back to his old place, 74 State street, Joseph Curran has taken the basement under 175 Wabash ave., and Frank Benthey, who formerly had the main floor at this number, has gone out of business, and it is said he will take a position in the Hort. Department of the World's Fair. The W. D. Allen Floral Co. has moved south on State street, beyond Adams street, the farthest south any florist has yet dared to try it on that street. The old store of this Company at 65 State street, has been taken by a new concern, with the title, "Central Floral Co.," which is under the management of Andrew Miller, who was until lately manager for the former tenants at that number. It is rumored that Mrs. Krick, who preceded the Allen Floral Co. at this number, and who retired from the business when they took possession, is interested in the new concern. It is also reported that John Bohan will go out of business as a wholesaler and that his present location will be taken by M. Olsen.

The Prince Bros., who have a city store on Adams street, will make large additions to their greenhouse plant at Downer's Grove this season.

The international chrysanthemum show is still on the tapis. Several meetings of the executive committee of the Hort. Society have been held during the last week to consider matters in connection with the project, but all the red tape has not yet been broken through. We will certainly have a definite announcement next week.

Geo. W. Miller has sold his place in Lake View to some real estate men who will cut the land up into building lots. Thus another landmark in the trade will disappear. Mr. Miller will build a large new establishment in some suburban town where he can have good shipping facilities. He has sites in view at both Hinsdale and Lake Forest with a leaning toward the first named place. He will still maintain his shipping trade in plants but the larger part of the new establishment will be devoted to cut flowers. In the construction of the new place he proposes to try a very daring experiment. The houses will be similar to the regulation three-quarter span forcing houses, but with the short span to the south instead of the long one as is usual. He is firmly convinced that this arrangement will give better results and proposes to demonstrate the truth of his theories. His idea is to have the glass on the short span at such an angle that the sun's rays will strike it as nearly square as possible during the winter months. He believes that with the south slope at the angle now usual the sun's rays are deflected when that orb hangs low in the horizon in winter and that we get the full benefit only in the summer time when we do not wish it. The outcome of this experiment will certainly be looked forward to with interest by all growers.

Baltimore.

The club met in their new quarters, and very pleasant they are, with convenient desks and seats, electric lights, soft carpets, etc., as the advertisements say. But after a few minutes no one paid any attention to their surroundings, the business on hand proving more interesting.

First of all another batch of passive or associate members were admitted to the club by ballot. Then another gold medal premium for the chrysanthemum show was exhibited, offered by President Fraser for the best chrysanthemum plant, grown by a young man not over 18, in the employ of a florist.

After some little routine business the question box was opened and the first question was a poser, "Will five 2-inch pipes (hot water) heat a span roof house 16 feet wide, to grow roses?" Almost every one present had an idea of his own, and hastened to express it; the question gradually narrowing down to a discussion of the relative merits of large and small pipes for water heating. To settle the matter President Fraser proposed a debate at next meeting and the question for debate was stated: "Resolved, that it is more economical in fitting a house 100x20 feet for heating with hot water to use 2 inch pipe than 4-inch pipe." Mr. Hess being appointed to lead the affirmative, Mr. Ekas the negative.

The next question, "What is best shading for houses in summer?" called out about a dozen opinions among which were, "Naptha and white lead," "Lime and water," "Puddling clay and water," "$^2/_3$ linseed oil and $^1/_3$ turpentine."

After discussing the question, "Do callas pay?" and "Is the present form of flower pots the best?" without coming to any

decision, the club adjourned to the second Monday in May.

Society has had a time of it beginning with "Fasching Thursday" which was Monday this time, the dances which were performed and witnessed by the elite of the city, at the Academy of Music, taking place on Monday night and an extra matinee Tuesday afternoon. Eight thousand dollars were secured for charity and a great lot of flowers were used up to help the florists.

The dedication of the new Oddfellows' Hall brought a great number of visitors to the city on Tuesday, and altogether the week has been a good one with the exception of one day, Friday, which was wet.

The grass is growing, anemones blooming in the fence rows, bedding stuff beginning to sell, and with no more firing and good demand for cut flowers, the heart of the suburban grower is expanding daily. MACK.

The Easter Trade Compared With That of Last Year

LATE REPORTS.

TAUNTON, Mass.—Sales and prices about same. Lilies poor, other flowers about as usual.

SALEM, MASS.—About 40% larger. Bulb stuff not so good. Prices fully up to last year except on candidums. More plants sold. Supply much the same.

ANDOVER, MASS.—Nearly double. Increased call for lilies. Prices about same. The hot weather of early April brought lilies in too early. Other things were good.

NEW HAVEN, CONN.—About the same. More call for carnations and Bon Silene roses. Prices a little lower. More demand for lilies and azaleas in pots. Supply larger.

MARBLEHEAD, MASS.—About same. More call for carnations and roses. Price of carnations higher, about same on other flowers. More call for cut flowers than pot plants. Supply larger and quality better.

BRATTLEBORO, VT.—Increase of about 10%. Greater demand for candidum, roses and carnations. That for Harrisii about same. Prices about same. More call for blooming plants, especially hydrangeas. Supply larger, quality about same.

LOWELL, MASS.—One third larger. Inceeased sales of pinks, less call for set pieces. Retail prices about same. Lilies sold better; hydrangeas were a drug. Supply larger and of better quality. Orders came in later than usual and caused a rush at the last moment.

NEW ORLEANS.—About 30% larger. Loose flowers were more in demand than designs. Prices about same. Short supply of longiflorum and Harrisii, in fact none in this market. Easter becomes more such as in former years. Christmas used to be the day for decorations in churches in this city.

BURLINGTON, VT.—One fourth larger. Less call for Harrisiis. Prices little lower on lilies. More call for potted plants. Supply equal in quantity but better in quality. Five years ago Easter sales were confined to a few churches, now every one must have something in the way of flowers. Many Easter boxes of flowers were sent to friends.

ROCHESTER, N. Y.—Probably 10% larger. Could have sold more but ran out of stock. One florist notes an increase in the call for small hydrangeas and other moderate priced plants and another in the demand for violets. Carnations were also in great demand. Prices generally about same as last year. One notes an increased call for azaleas among plants. Supply was of better quality but short in quantity. The cold freezing weather previous to Easter made dealers cautious about laying in a large stock.

News Notes.

NEWPORT, R. I.—Mr. Carl Jurgens sails May 5 on his annual European trip.

WE ARE NOW in our new quarters, No. 322 Dearborn street, Chicago. Please address mail accordingly.

CANNONSBURG, PA.—Mr. J. D. Jarrett has sold his greenhouses and business to Mr. John Gibbs of Emsworth, Pa.

PATERSON, N. J.—Mr. John R. Johnson, recently foreman at United States Nurseries, has been appointed to take charge of and lay out the Paterson city parks.

DESMOINES, IA.—A very destructive hail storm struck this city during the evening of May 2, and much damage to greenhouses resulted. J. F. Marshall lost about 1000 lights of 10x12 single thick glass. There was a high wind and heavy rain, but no frost.

NEW DORP, STATEN ISLAND.—Jas. Dennis, formerly of Mt. Auburn, Mass., and for many years gardener on the Adams estate at Watertown, Mass., died of erysipelas on April 22. He has recently been employed on the Vanderbilt place here under Robt. Bottomly.

SPRINGFIELD, MASS.—J. E. Taylor, well known as an amateur horticulturist, died on April 21. He was secretary of the Hampden Co. Horticultural Society from 1862 to 1881 and then president until 1891. He was one of the original promoters of that organization and has always been a worker in its interest.

WASHINGTON, D. C.—From information gathered it appears that fully 50 per cent. more flowers were sold than ever before at Easter. Retail prices in the market advanced on Saturday until by noon they were about double what was asked in the morning and some of the stores also took advantage of the situation to increase prices for Bermudas and callas. Everyb dy sold out clean and Sunday and Monday being dull weather days, stuff remained scarce nearly all the week.

The Art Palace at the World's Fair.

Grecian-Ionic in style, the Fine Arts Building is a pure type of the most refined classic architecture. The building is oblong, and is 500 by 320 feet, intersected north, east, south and west by a great nave and transept 100 feet wide and 70 feet high, at the intersection of which is a dome 60 feet in diameter. The building is 125 feet to the top of the dome, which is surmounted by a colossal statue of the type of famous figure Winged Victory. The transept has a clear space through the center of 60 feet, being lighted entirely from above. On either side are galleries 20 feet wide and 24 feet above the floor. The collections of the sculpture are displayed on the main floor of the nave and transept, and on the walls both of the ground floor and of the galleries are ample areas for displaying the paintings and sculptured panels in relief. The corners made by the crossing of the nave and transept are filled with small picture galleries. Around the entire building are galleries 40 feet wide forming a continuous promenade around the classic structure. Between the promenades and naves are the smaller rooms devoted to private collections of paintings and collections of the various art schools. On either side of the main building, and connected with it by handsome corridors, are very large annexes, which are also utilized by various art exhibits. The main building is entered by four great portals, richly ornamented with architectural sculpture, and approached by broad flights of steps. The walls of the loggia of the colonnades are highly decorated with mural paintings, illustrating the history and progress of the arts. The frieze of the exterior walls and the pediments of the principal entrances are ornamented with sculptures and portraits in bas-relief of the masters of ancient art.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. C. VAN LINDLEY, Pomona, N. C., president; W. J. PETERS, Troy, O., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; A. R. WHITNEY, Franklin Grove, Ill., treasurer. The seventeenth annual meeting at Atlanta, Ga., June, 1892.

Fungicides and Insecticides.

Bulletin No. 17 of the Hatch Experiment Station of the Mass. Agricultural College has just been issued and contains a large amount of valuable information regarding Fungicides and Insecticides and other matters of great interest to nurserymen. These Bulletins are sent free to all individuals who may request the same. This April number contains eleven fine plates of fruit trees and vines reproduced from photographs. The closing chapter contains so much that is timely that we gladly give it space here:

Summing up the results of the work of the past season, we arrive at the following conclusions: That the apple scab, pear leaf blight and cracking of the fruit, the peach and plum fruit rot, the plum leaf blight, and plum black wart, the grape powdery mildew and black rot, the raspberry anthracnose and the potato leaf blight and rot, may be wholly or largely prevented when the solutions of copper are properly applied. That by the combined use of the Bordeaux mixture and Paris green the above fungi are prevented, the tent caterpillars and canker-worms are killed, and the injury to the apple and pear from the codling moth, and to the plum and peach by the plum curculio, may be largely prevented. That if the spores of the plum wart become established in the tree, the copper solutions do not stop their growth, but that by painting with "kerosine paste" they are destroyed at once. That the peach foliage is very susceptible to injury from copper solutions and that these solutions must be applied at from one-third to one-fourth the strength used upon the apple and pear. That peach buds can be protected by bending the trees over to the ground and covering with some light, thin material. That the amount of copper adhering to apples and grapes, that have been properly sprayed with copper solution, is so small that no injury can possibly occur from their free consumption. That the Siberian crab

THE ART PALACE AT THE WORLD'S FAIR.

apple tree does not make a good stock upon which to graft the varieties of our larger apples. That girdling the grape vine during the season of 1890 in Dr. Fisher's vineyard resulted in a weakened growth and a diminished crop in 1891. That young trees may be protected from injury by mice by painting with Portland cement and Paris green.

OUTLINE OF PLANS FOR USING FUNGICIDES AND INSECTICIDES FOR 1892.

FOR THE APPLE.

Spray for the destruction of the spores of the apple scab, and leaf blight, with sulphate of copper, (Blue Vitriol), one pound to twenty-five gallons of water, or sulpate of iron (Copperas) one pound to two gallons. For the destruction of the tent caterpillar, canker worm and bud moth use the Bordeaux mixture, one-half strength, with Paris green, one pound to 150 gallons, just before the blossoms unfold, and for the same and the codling moth, as soon as the petals have fallen. Make a third application of the Bordeaux mixture and Paris green in about two weeks from the time the petals fall, should there have been heavy rains since the last application; then use the ammoniacal carbonate of copper, one pound to fifty gallons of water, at intervals of from two to four weeks, according to the weather, until the middle of August. We would recommend the trial of sulphate of copper, one pound to 500 and 800 gallons of water, after the middle of June. Should no rain occur after the use of any fungicide or insecticide no further application need be made until it does rain, but if the interval has been long, spraying should immediately follow a heavy rain.

FOR THE PEAR.

For the pear scab, leaf blight and cracking of the fruit, and codling moth, the same treatment should be given as for the apple, except that no Paris green need be used until after the petals have fallen, and only two applications of that need be made. If the pear tree psylla should appear, spray the trees thoroughly with the kerosine emulsion, one part to twenty parts of water.

FOR THE PLUM.

We would advise the same treatment, as given to the apple and the pear, for the plum leaf blight, black wart and the fruit rot. For the plum curculio, use the Bordeaux mixture, one-half strength, with Paris green, one pound to 200 gallons. One application of the ammoniacal carbonate of copper should be made after the middle of August, to prevent the rotting of the fruit and the leaf blight.

FOR THE PEACH.

To destroy the plum curculio, spray with the Bordeaux mixture, one-fourth strength, and Paris green, one pound to 200 gallons. For the fruit rot, spray with the ammoniacal carbonate of copper, one pound to fifty gallons of water. Try the sulphate of copper, one pound to 1000 gallons of water, for the fruit rot.

FOR THE GRAPE.

Spray with the concentrated solution of sulphate of copper every part of the vines and trellis before the buds unfold. Just before the blossom buds unfold, spray with the Bordeaux mixture, one-half strength, with Paris green, one pound to 100 gallons. As soon as the petals have fallen, spray again with the same; then at intervals of about two weeks use the ammoniacal carbonate of copper, one pound to twenty-five gallons. Try the sulphate of copper, one pound to 500 and 800 gallons of water at the same intervals.

FOR RASPBERRY AND BLACKBERRY.
